### I UNDERSTANDING THE CONTEXT

1. Introduction                     3
2. What is Technology Acceptance?   9
3. What is User-Centered Design?    29

### II UNDERSTANDING THE USER

4. Analysis – Research Questions    41
5. Diabetes mellitus                45
6. Qualitative Empiric Development of User Requirements 61

### III QUANTIFYING USER REQUIREMENTS

7. Quantitative Empiric Development of User Requirements 79
8. Methodology                         81
9. Description of the Sample          97

I UNDERSTANDING THE CONTEXT 1

1 Introduction 3
1.1 Diabetes - A Tightrope for Health Care 3
1.2 Technology as a Safety Net 6
1.3 Two Linchpins - Technology Acceptance and User Centered Design 7

2 What is Technology Acceptance? 9
2.1 History of Technology Acceptance 10
2.2 Theory of Diffusion of Innovations 12
2.3 Technology Acceptance Model 14
  2.3.1 TAM 14
  2.3.2 TAM2 15
  2.3.3 TiAM3 16
2.4 Unified Theory of Acceptance and Use of Technology 17
2.5 Theory of Technology Dominance 19
2.6 Applicability of Acceptance Models to Diabetes Management Assistants 20
2.7 User Diversity and Heterogeneity 21
  2.7.1 Age 21
  2.7.2 Domain Knowledge 22
  2.7.3 Technical Expertise 22
  2.7.4 Coping Behavior 23
2.8 Summary and Conclusion 24
## Contents

6.1.1 Results for Diabetes in General .......................... 63
6.1.2 Results for Small Screen Devices .......................... 64
6.1.3 Results for Diabetes Diaries .......................... 65
6.1.4 Usage Motives and Barriers .......................... 66
6.1.5 Summary ........................................... 67

6.2 Interview Results ........................................ 68
   6.2.1 Diabetic ........................................ 69
   6.2.2 Physicians ........................................ 71
   6.2.3 Representative of a Manufacturer .................. 73

6.3 Conclusion ........................................... 74

### III QUANTIFYING USER REQUIREMENTS

7 Quantitative Empiric Development of User Requirements .......................... 79

8 Methodology ........................................... 81
   8.1 Scales ........................................... 81
      8.1.1 Perceived Vision Disability - PVD .................. 82
      8.1.2 Aging and Mobile-Phone Compatibility .......... 83
      8.1.3 Technical Expertise (TE) .................. 83
   8.2 Independent Variables .................................. 86
      8.2.1 Demographic Data .................................. 86
      8.2.2 Health Data .................................. 87
      8.2.3 Technical Expertise .................................. 88
   8.3 Dependent Variables .................................. 88
      8.3.1 Illness Factors .................................. 89
      8.3.2 Device Factors .................................. 90
      8.3.3 Usage Motives and Barriers .................. 91
   8.4 Hypotheses ........................................... 92
      8.4.1 Illness Factors .................................. 94
      8.4.2 Device Factors .................................. 95
      8.4.3 Motives and Barriers for Medical Technology Usage ........ 95
      8.4.4 Motives and Barriers for Mobile Phone Integration ........ 95

9 Description of the Sample ........................................... 97
   9.1 Demographic Data ........................................... 97
   9.2 Technical Expertise ........................................... 99
   9.3 Health Data ........................................... 100
IV UNDERSTANDING TECHNOLOGY

12 Small Screen Devices
12.1 Display Design
12.1.1 Problems with Display Size
12.1.2 Fitt's Law
12.1.3 Problems with Function Multitude
12.1.4 Display Design Principles
12.1.5 Principles of User Interface Design
12.1.6 Summary
12.2 Devices for Diabetics
12.2.1 Blood Glucose Meters
12.2.2 Insulin Pumps
12.2.3 Closed-loop-Systems
12.2.4 Diasend Visualization Service
12.2.5 Digital Diary Software
12.3 Cognitive Walkthrough of Omnitest plus
12.3.1 Method
12.3.2 Results
12.3.3 Conclusion
12.4 Summary

13 Prototyping Tools for Designing a Small Screen Device for Diabetics
13.1 Adobe Flex
13.2 iOperating System (iOS)
13.3 JAVA and Android
13.3.1 Android
13.3.2 JavaME
13.3.3 Jacareto and CleverPHL
13.4 Updates from Early 2013

14 eDiabetes - a JavaME based Diabetes tool
14.1 eDiabetes - Goal Definition
14.1.1 Diabetes Diary
14.1.2 Calculation of BE-Units .............................................. 172
14.1.3 Medicine Reminder .............................................. 172
14.1.4 Health Passport .................................................. 173
14.1.5 Visual Analysis ................................................... 173
14.1.6 Configurability .................................................... 173
14.1.7 Prototypic Implementation for Performance Measurement . . 173

14.2 The JavaME Prototype Design Decisions .......................... 173
  14.2.1 Font Selection ................................................ 173
  14.2.2 Menu Depth .................................................. 174
  14.2.3 Menu Labels .................................................. 174

14.3 eDiabetes ................................................................ 174
  14.3.1 The Main Menu ................................................ 174
  14.3.2 The Diary ...................................................... 175
  14.3.3 The Health Passport ........................................... 177
  14.3.4 The Settings ................................................... 178
  14.3.5 Medicine ....................................................... 178
  14.3.6 The BE-Calculator ............................................. 178
  14.3.7 The Plotter ..................................................... 179
  14.3.8 The Screener .................................................. 179

15 Testing eDiabetes ............................................................. 181
  15.1 Research Questions for the Prototype .......................... 181
  15.2 Experimental Procedure ......................................... 182
    15.2.1 Laboratory Setup ........................................... 182
    15.2.2 The Task Set ............................................... 184
    15.2.3 Performance Measurement ................................. 186
    15.2.4 Measuring Acceptance .................................... 187

15.3 Three User Studies ..................................................... 187

16 Study: Domain Knowledge and Performance ....................... 189
  16.1 Method ............................................................ 189
  16.2 Hypotheses ......................................................... 190
  16.3 Sample ............................................................. 190
  16.4 Results ............................................................. 192
    16.4.1 Descriptive Analysis ..................................... 192
    16.4.2 ANOVA Analyses ......................................... 193
    16.4.3 Correlational Analysis .................................. 194
  16.5 Interaction Effects ................................................. 195
V  FREEING FROM TECHNOLOGY 223

20  Thinking in Different Paths 225
   20.1  Anoto Paper and the Livescribe Echo 226
      20.1.1  Livescribe Echo 226
      20.1.2  An Interactive Anoto-Paper Based Diabetes Diary 227

21  Diabetto - Digital Diabetes Diary Using Livescribe 229
   21.1  What Features to Include? 229
   21.2  Limitations of the Pen 230
   21.3  Diabetto - A Digital Pen Based Diabetes Diary 231
   21.4  The Applications 234

22  Testing Diabetto 237
   22.1  Method 237
      22.1.1  Experimental Procedure 237
      22.1.2  The Questionnaire 238
      22.1.3  The Task Set 239
      22.1.4  Performance Measurement 240
   22.2  Hypotheses 241
   22.3  Description of the Sample 242
   22.4  Results 242
      22.4.1  Descriptive Results 243
      22.4.2  Effects on Performance 246
      22.4.3  Pen Evaluation 247
   22.5  Qualitative Insights 249
   22.6  Discussion 250
      22.6.1  Limitations and Further Research 251
   22.7  Chapter Remarks 252

VI  EVALUATION 253

23  Evaluation 255
   23.1  Summary 255
      23.1.1  PART I: Understanding the Context 256
      23.1.2  PART II: Understanding the User and PART III: Quantifying User Requirements 258
      23.1.3  PART IV: Understanding Technology 259
23.1.4 PART V: Freeing from Technology 261
23.2 Method Reflection 261
  23.2.1 Method Extension 263
24 Limitations and Future Work 265
  24.1 Sample Validity 265
  24.2 Integration of User-Centered Design and Technology Acceptance Theories 266
    24.2.1 Explaining Behavior Instead of Intention 266
    24.2.2 Observational Studies 266
    24.2.3 The Effect of Culture 267
    24.2.4 The Effect of Personality 267
    24.2.5 Hedonic Design 268
  24.3 Application of the Findings 268
    24.3.1 User Clustering, Certificates, and Diagnosis 269
    24.3.2 The Rise of Social Network Technology 269

VII APPENDIX 271
A Demographic Change 273
B Small Screen Devices for Diabetics 275
  B.1 Blood Glucose Meters 275
  B.2 Insulin pumps 275
C Quantitative Empiric Development of Requirements for a Diabetes Management Assistant 285
  C.1 German original survey 285
  C.2 PCA-Tables of Used Scales 311
  C.3 Functional requirements of diabetes living assistants 311
  C.4 Non-functional requirements of diabetes living assistants 316
D Testing eDiabetes 321
  D.1 German Original Experimental Questionnaire 321
E Testing Diabetto 341
  E.1 German Original Experimental Questionnaire 341
  E.2 Evaluation Sheet for Video Recordings 356
Bibliography 359
