Preface XI

1	Biosynthesis and Chemical Properties of Natural Substances in Plants	1
1.1	Selected Classes of Secondary Metabolites	3
1.1.1	Occurrence and Compartmentation	3
1.1.2	Biosynthesis	11
1.1.2.1	Alkaloids	12
1.1.2.2	Phenol Derivatives, Especially Flavonoids	19
1.1.2.3	Betalains	22
1.1.2.4	Cyanogenic Glycosides, Glucosinolates, and other Indole Derivatives	24
1.1.2.5	Terpenes	29
1.1.3	Transcriptional Control	31
1.1.4	Transport of Secondary Metabolites	39
1.2	Evolution of Natural Compounds in Plants	44
1.2.1	Parallel Evolution of Similar Pathways	46
1.2.2	Gene Duplication	48
1.2.3	Gene Clusters	52
1.2.4	Natural Variation	58
1.2.5	Modulation of Different Molecules with Similar Functions	59
1.2.6	Evolution by Stress Factors	60
1.2.6.1	Abiotic Stress	60
1.2.6.2	Biotic Factors	61
1.3	Biotechnological Applications	62
1.3.1	Identification and Quantification of Natural Plant Products	62
1.3.2	Biological Activity	67
1.3.3	Biotechnological Production of Natural Compounds	68
2	Function of Natural Substances in Plants	81
2.1	Secondary Compounds in Primary Metabolism	81
2.2	Development	83
2.2.1	Vegetative Growth	85
2.2.1.1	Structural Polymers	87

2.2.1.2	Flavonoids and Auxin Transport	88
2.2.1.3	Glucosinolates and the Biosynthesis of IAA	90
2.2.1.4	Polar Growth	91
2.2.1.5	Cytoskeleton and Cell Cycle	91
2.2.1.6	Alkaloids and Growth	93
2.2.1.7	Senescence	95
2.2.2	Reproduction: Male Fertility	95
2.2.3	Flower Biology: Pollination	98
2.2.3.1	Nutrients	98
2.2.3.2	Aroma Volatiles	99
2.2.3.3	Color	105
2.2.4	Fruit and Seeds	109
2.2.4.1	Fruit Development	109
2.2.4.2	Seed Formation	112
2.2.4.3	Seed Dispersal	112
2.2.4.4	Seed Dormancy	113
2.3	Abiotic Stress	115
2.3.1	Antioxidative Properties in Plants	116
2.3.2	Light and UV Irradiation	118
2.3.3	High Temperatures	120
2.3.4	Cold, Salt, and Drought Stress	122
2.3.5	Nutrient Deficiency	122
2.3.6	Environmental Pollution	123
2.3.6.1	Heavy Metal Stress	123
2.3.6.2	Air Pollution	124
2.4	Symbioses	124
2.4.1	Rhizobia	125
2.4.2	Mycorrhiza	127
2.4.3	Endophytic Fungi	131
2.4.4	Lichens	131
2.5	Defense	132
2.5.1	Pathogens	134
2.5.1.1	Preformed Defense Response	136
2.5.1.2	Induced-Defense Response	143
2.5.1.3	Systemic Acquired Resistance	153
2.5.2	Antimicrobial Potential in Plant Protection (Biofumigation)	154
2.5.3	Invertebrate Herbivores	154
2.5.3.1	Insects	155
2.5.3.2	Phytopathogenic Fungi Alter the Chemical Defense of Plants Against Insects	163
2.5.3.3	Biological Plant Protection Against Insects with Secondary Metabolites	164
2.5.3.4	Nematodes	164
2.5.3.5	Snails/Slugs	166
2.5.4	Parasitic Plants	166
2.6	Allelopathy	170

3	Biological Effects on Microorganisms and Animals	175
3.1	Coevolution	175
3.1.1	Adaptation Mechanisms of Microbes and Herbivores	179
3.1.1.1	Fungi	182
3.1.1.2	Insects	182
3.1.1.3	Vertebrates	187
3.1.2	Attraction of Insects	189
3.2	Effects on Vertebrates: An Overview	198
3.2.1	Structural and Functional Diversity of Natural Substances: Challenges and Promises	198
3.2.2	Molecular Interactions with Cellular Components	201
3.2.2.1	Protein Targets	201
3.2.2.2	Interaction with Nucleic Acids	206
3.2.2.3	Interaction with Lipids	206
3.2.2.4	Interaction with Carbohydrates	206
3.2.2.5	Metal Chelators	207
3.2.3	Visualization of Natural Substances in Living Cells	209
4	Metabolism and Toxicity of Natural Substances in Mammals	213
4.1	Metabolism of Natural Substances in Mammals	213
4.1.1	Principles of Pharmacokinetics	213
4.1.1.1	Absorption, Distribution, Metabolism, and Excretion	216
4.1.2	Case Studies of Selected Natural Compounds	221
4.1.2.1	Quercetin	221
4.1.2.2	Catechins and Proanthocyanidins	224
4.1.2.3	Resveratrol	224
4.1.2.4	Morphine	226
4.1.2.5	Nicotine	227
4.1.3	Metabolic Bioactivation	229
4.1.4	Effects on Enzymes Controlling Biotransformation and Bioavailability	232
4.1.4.1	Medical Importance	233
4.1.5	Genetic Polymorphisms	235
4.1.5.1	Genetic Polymorphisms of Key Metabolic Enzymes	235
4.1.5.2	Caffeine	237
4.1.5.3	Nicotine	238
4.1.5.4	Codeine and Morphine	238
4.1.5.5	Pharmacogenomics and Personalized Medicine	239
4.2	Toxicity	240
4.2.1	Basic Toxicology	240
4.2.1.1	Cytotoxicity	242
4.2.2	Toxicity of Selected Natural Substances	246
4.2.2.1	Animal Poisons	246
4.2.2.2	Poisons in Plants, Fungi, and Bacteria	247
4.2.2.3	Taxus Alkaloids	250

- 4.2.2.4 Phallotoxins and Amatoxins 250
- 4.2.2.5 Ricin 250
- 4.2.2.6 Bacterial Toxins 252
- 4.2.3 Strategies and Difficulties in Toxicological Evaluations 253
- 4.2.3.1 Mutagenicity and Cancerogenicity 254
- 4.2.3.2 Reprotoxicity and Developmental Toxicity 256
- 4.2.3.3 Experimental Variables and Limitations of Test Systems 257

- 5 Examples of Physiological Effects of Natural Substances Present in Food and in Medicinal Plants 261**
- 5.1 Are Antioxidants Good for Health? 261
- 5.1.1 Generation and Homeostatic Control of Reactive Oxygen and Nitrogen Species 261
- 5.1.2 Function of ROS/RNS as Signaling Molecules for Cellular Functions 268
- 5.1.3 Oxidative Stress in Human Diseases and in Aging 271
- 5.1.4 Natural Substances Affecting Redox Homeostasis 273
- 5.1.4.1 Reduction of ROS in a Redox Reaction 273
- 5.1.4.2 Formation of Chelates with Metals 274
- 5.1.4.3 Inhibition of Enzymes Involved in Stress Defense 275
- 5.1.4.4 Initiation of an Adaptive Response 276
- 5.1.5 Hormesis and the Benefits of Temporary Mild Oxidative Stress 278
- 5.2 Endocrine Effects of Natural Substances 280
- 5.2.1 Are Endocrine Disruptors a Threat to Animal and Human Health? 280
- 5.2.2 How Do Phytoestrogens Interfere with the Endocrine System? 285
- 5.2.2.1 The Estradiol Receptor is a Target of Natural Substances 287
- 5.2.2.2 Natural Compounds Affecting Steroid Biosynthesis 290
- 5.2.2.3 Other Activities of Phytoestrogens 292
- 5.2.3 Evaluation of Risks and Benefits of Phytoestrogens to Treat Common Diseases 292
- 5.2.3.1 Phytoestrogens and Reproductive Functions 293
- 5.2.3.2 Do Phytoestrogens Protect Against Breast Cancer? 296
- 5.2.3.3 Hormone Replacement Therapy 297
- 5.2.3.4 Other Physiological Effects of Phytoestrogens 298
- 5.2.3.5 Phytoestrogens Illustrate the Experimental Challenge of a Mechanistic Analysis 299
- 5.2.4 Transgeneration Effects 299
- 5.2.5 Natural Substances Interfering with Nonsteroidal Signaling 304
- 5.3 Interference with Neural Functions 307
- 5.3.1 Basic Features of the Nervous System and Synaptic Transmission 307
- 5.3.2 Bioactivity of Cannabinoids 314
- 5.3.2.1 Effects of Phytocannabinoids on Neural Functions 318
- 5.3.2.2 Medical Applications of Phytoestrogens 320
- 5.3.3 Discovery and Bioactivity of Opioids 322

- 5.3.4 Analgesic Properties of Opioids and Cannabinoids 324
- 5.3.4.1 Analgesic Effects of Opioids 326
- 5.3.4.2 Analgesic Activity of Cannabinoids 327
- 5.3.5 The Hallucinogenic Drugs Psilocin, Psilocybin, and Mescaline 328
- 5.3.6 Natural Substances Affecting Cholinergic Signaling 330
- 5.3.6.1 The Cholinergic Synapse 330
- 5.3.6.2 Cholinergic Signaling is a Target for Natural Substances 332
- 5.3.6.3 Inhibitors of AChE 333
- 5.3.6.4 Medical Applications of AChE Inhibitors 336
- 5.3.7 Sympathomimetic Substances 337

6 Nature's Drugstore for a Healthy Life 341

- 6.1 Biologically Active Food and Food Components 341
- 6.1.1 The Quantity of Food Intake Affects Life Expectancy 343
- 6.1.2 Resveratrol: Longevity and Health with Grapes? 347
- 6.1.3 Food with Health-Promoting Bioactive Substances 351
- 6.1.3.1 Grapes (Resveratrol) 351
- 6.1.3.2 Broccoli (Sulforaphane) 353
- 6.1.3.3 Hops (Xanthohumol) 354
- 6.1.3.4 Green Tea (Epigallocatechin 3-Gallate) 355
- 6.1.3.5 Garlic (Allicin) 356
- 6.1.3.6 Other Polyphenol-Rich Foods 356
- 6.1.3.7 Is There a General Mechanistic Principle for Health-Promoting Substances in Food? 357
- 6.1.4 Functional Food: Does it Hold the Promise? 359
- 6.2 Natural Compounds in Pharmacological Research 360
- 6.2.1 Mining for Bioactive Compounds in Marine and Terrestrial Organisms 360
- 6.2.2 Medicinal Chemistry Inspired by Natural Products 364
- 6.2.2.1 Lessons from Natural Substances About Relevant Targets 365
- 6.2.2.2 Natural Chemical Scaffolds and their Pharmacological Optimization 365
- 6.2.2.3 Systematic Computational Analysis of Natural Scaffolds and Peptide Motifs 368
- 6.3 The Problem of Complexity: Analysis and Consequences 370
- 6.3.1 Many Targets: A Problem? 370
- 6.3.2 From Pharmacology to Polypharmacology 371
- 6.3.3 Reverse Pharmacology Inspired by Traditional Medicine 375

Further Reading 379
