Preface	xvii	2.2.8 Bacterial Metabolism	18
The Authors	xix	2.2.9 The Archaea	19
Contributing Authors	xxi	2.2.10 The Planctomycetes, Verrucomicrobia and Chlamydiae Superphylum	20
<b>Part I</b>			
<b>Review of Basic Microbiological Concepts</b>			
<hr/>			
<b>1 Introduction to Environmental Microbiology</b>			
<i>Ian L. Pepper, Charles P. Gerba and Terry J. Gentry</i>			
1.1 Environmental Microbiology as a Discipline	3	2.3 Eukaryotes	21
1.2 Microbial Influences on our Daily Lives	5	2.3.1 Fungi	21
1.2.1 Overall Health of the Planet	5	2.3.2 Protozoa	24
1.2.2 What Infects Us	5	2.3.3 Algae	26
1.2.3 What Heals Us	6	2.4 Viruses	27
1.2.4 What We Drink	6	2.4.1 Infective Nature of Viruses	28
1.2.5 What We Eat	7	2.4.2 Prokaryotic Viruses	30
1.2.6 What We Breathe	7	2.4.3 Eukaryotic Viruses	31
1.3 Environmental Microbiology in 2014	7	2.5 Other Biological Entities	32
Questions and Problems	8	2.5.1 Viroids	32
References and Recommended Reading	8	2.5.2 Prions	33
<b>2 Microorganisms Found in the Environment</b>			
<i>Ian L. Pepper and Terry J. Gentry</i>			
2.1 Classification of Organisms	9	Questions and Problems	34
2.2 Prokaryotes	10	References and Recommended Reading	34
2.2.1 Bacteria	10	<b>3 Bacterial Growth</b>	
2.2.2 Bacterial Cell Envelope	11	<i>Raina M. Maier and Ian L. Pepper</i>	
2.2.3 Bacterial Cytoplasm	14	3.1 Growth in Pure Culture in a Flask	38
2.2.4 Bacterial Glycocalyx	15	3.1.1 The Lag Phase	38
2.2.5 Bacterial Appendages	16	3.1.2 The Exponential Phase	39
2.2.6 Bacterial Endospores	17	3.1.3 The Stationary Phase	41
2.2.7 Genetic Information Transfer	17	3.1.4 The Death Phase	41
		3.1.5 Effect of Substrate Concentration on Growth	43
		3.2 Continuous Culture	44
		3.3 Growth in the Environment	46
		3.3.1 The Lag Phase	47
		3.3.2 The Exponential Phase	48
		3.3.3 The Stationary and Death Phases	48
		3.4 Mass Balance of Growth	50
		3.4.1 Aerobic Conditions	51
		3.4.2 Anaerobic Conditions	52
		Questions and Problems	52
		References and Recommended Reading	55

## Part II

# Microbial Environments

---

### 4 Earth Environments

*Ian L. Pepper and Terry J. Gentry*

4.1 Earth's Living Skin	59
4.2 Physicochemical Characteristics of the Earth Environment	60
4.2.1 Earth Environments	60
4.2.2 The Solid Phase	63
4.2.3 The Liquid Phase	70
4.2.4 Soil Atmosphere	73
4.3 Soil as a Microbial Environment	74
4.3.1 Biotic Stresses	74
4.3.2 Abiotic Stresses	74
4.4 Microorganisms in Surface Soils	76
4.4.1 Bacteria	77
4.4.2 Actinomycetes	78
4.4.3 Archaea	78
4.4.4 Fungi	79
4.4.5 Algae	80
4.4.6 Protozoa	82
4.5 Distribution of Microorganisms in Soil	82
4.6 Microorganisms in Subsurface Environments	83
4.6.1 Microorganisms in Shallow Subsurface Environments	84
4.6.2 Microorganisms in Deep Subsurface Environments	85
References and Recommended Reading	87

### 5 Aeromicrobiology

*Ian L. Pepper and Charles P. Gerba*

5.1 Introduction	89
5.2 Aerosols	89
5.3 Nature of Bioaerosols	90
5.4 Aeromicrobiological Pathway	91
5.4.1 Launching	91
5.4.2 Transport	92
5.4.3 Deposition	93
5.5 Microbial Survival in the Air	95
5.5.1 Relative Humidity	95
5.5.2 Temperature	95
5.5.3 Radiation	95
5.5.4 Oxygen, OAF and Ions	96
5.6 Extramural Aeromicrobiology	96
5.6.1 Aerosolization of Indigenous Soil Pathogens	96
5.6.2 Influenza Pandemics	97
5.6.3 Microbiology in the Clouds	98

5.6.4 Agriculture	98
5.6.5 Waste Disposal	100
5.6.6 Important Airborne Toxins	101
5.7 Intramural Aeromicrobiology	102
5.7.1 Buildings	102
5.7.2 Hospitals and Laboratories	103
5.8 Bioaerosol Control	104
5.8.1 Ventilation	104
5.8.2 Filtration	105
5.8.3 Biocidal Control	105
5.8.4 Isolation	105
5.9 Biosafety in the Laboratory	105
5.9.1 Biological Safety Cabinets	106
5.9.2 Biosafety Laboratories	108
5.9.3 Biological Agent Classification	109
Questions and Problems	109
References and Recommended Reading	109

### 6 Aquatic Environments

*Virginia I. Rich and Raina M. Maier*

6.1 Introduction	111
6.2 Microbial Habitats in the Aquatic Environment	111
6.2.1 Physical and Chemical Characteristics	111
6.2.2 Overview of Planktonic Microbes	114
6.2.3 Overview of Benthic Microbes	115
6.2.4 At the Interface: Biofilms and Microbial Mats	117
6.3 Microbial Lifestyles in Aquatic Environments	121
6.3.1 Primary Production	121
6.3.2 Secondary Production	122
6.4 Marine Environments	124
6.4.1 Marine Planktonic Communities	126
6.4.2 Marine Benthic Communities	130
6.5 Freshwater Environments	131
6.5.1 Springs, Streams and Rivers	131
6.5.2 Lakes	132
6.6 Other Notable Aquatic Environments	133
6.6.1 Brackish Waters	133
6.6.2 Hypersaline Waters	134
6.6.3 Subterranean Waters	134
6.6.4 Wetlands	134
Questions and Problems	136
References and Recommended Reading	136

### 7 Extreme Environments

*Raina M. Maier and Julia W. Neilson*

7.1 Low Temperature Environments	139
7.1.1 McMurdo Dry Valleys, Antarctica	139
7.2 High Temperature Environments	142

7.2.1 Geothermal Hot Springs	142
7.3 Desiccation and UV Stress	143
7.3.1 The Atacama Desert, Chile	143
7.4 Aphotic Environments Based on Chemolithoautotrophy	146
7.4.1 Deep-sea Hydrothermal Vents	146
7.4.2 An Acid Mine Drainage System	148
7.4.3 A Desert Carbonate Cave	149
Questions and Problems	152
References and Recommended Reading	152

## Part III

### Detection, Enumeration, and Identification

---

#### 8 Environmental Sample Collection and Processing

*Ian L. Pepper and Charles P. Gerba*

8.1 Soils and Sediments	157
8.1.1 Sampling Strategies and Methods for Surface Soils	157
8.1.2 Sampling Strategies and Methods for the Subsurface	159
8.1.3 Sample Processing and Storage	161
8.2 Water	164
8.2.1 Sampling Strategies and Methods for Water	164
8.2.2 Processing Water Samples for Virus Analysis	165
8.2.3 Processing Water Samples for Detection of Bacteria	169
8.2.4 Processing Water Samples for Detection of Protozoan Parasites	169
8.3 Air	170
8.3.1 Sampling Devices for the Collection of Air Samples	170
8.4 Detection of Microorganisms on Fomites	174
Questions and Problems	174
References and Recommended Reading	175

#### 9 Microscopic Techniques

*Timberley M. Roane and Ian L. Pepper*

9.1 History of Microscopy	177
9.2 Theory of Microscopy	177
9.3 Visible Light Microscopy	179
9.3.1 Types of Light Microscopy	179
9.3.2 Sample Preparation	183
9.4 Fluorescence Microscopy	184

9.4.1 Direct Counts	184
9.4.2 Fluorescent Immunolabeling	185
9.4.3 Fluorescence <i>In Situ</i> Hybridization	186
9.4.4 Confocal Laser Scanning Microscopy	187
9.4.5 Flow Cytometry	187
9.4.6 Developing Methods in Fluorescence Microscopy	188
9.5 Electron Microscopy	188
9.5.1 Scanning Electron Microscopy	188
9.5.2 Transmission Electron Microscopy	189
9.5.3 Elemental Analysis	191
9.6 Scanning Probe Microscopy	191
9.6.1 Atomic Force Microscopy	191
9.7 Imaging	191
Questions and Problems	192
References and Recommended Reading	192

#### 10 Cultural Methods

*Ian L. Pepper and Charles P. Gerba*

10.1 Introduction	195
10.2 Extraction and Isolation Techniques	195
10.2.1 Extraction of Cells from Soil	195
10.2.2 Extraction of Cells from Water Samples	196
10.3 Plating Methods	196
10.3.1 Unculturable Bacteria	196
10.3.2 Most Probable Number Technique	201
10.4 Culture Media for Bacteria	202
10.4.1 General Media Used for Culturing Bacteria	202
10.5 Cultural Methods for Fungi	207
10.6 Cultural Methods for Algae and Cyanobacteria	207
10.7 Cell Culture-Based Detection Methods for Viruses	208
Questions and Problems	211
References and Recommended Reading	212

#### 11 Physiological Methods

*Raina M. Maier and Terry J. Gentry*

11.1 Introduction	213
11.2 Measuring Microbial Activity in Pure Culture	214
11.2.1 Substrate Utilization	214
11.2.2 Terminal Electron Acceptors	217
11.2.3 Cell Mass	219
11.2.4 Carbon Dioxide Evolution	219
11.3 Choosing the Appropriate Activity Measurement for Environmental Samples	220

11.4	Carbon Respiration	221
11.4.1	Measurement of Respiratory Gases, CO <sub>2</sub> and O <sub>2</sub> , in Laboratory and Field Studies	221
11.4.2	The Application of Respiration Measurements in Environmental Microbiology	225
11.4.3	Tracer Studies to Determine Heterotrophic Potential	230
11.4.4	Anaerobic Respiration as an Indicator of Microbial Activity	233
11.5	Incorporation of Radiolabeled Tracers into Cellular Macromolecules	233
11.5.1	Incorporation of Thymidine into DNA	233
11.5.2	Incorporation of Leucine into Protein	234
11.6	Adenylate Energy Charge	234
11.7	Enzyme Assays	235
11.7.1	Dehydrogenase Assay	236
11.8	Stable Isotope Probing	239
	Questions and Problems	240
	References and Recommended Reading	240

## 12 Immunological Methods

*Hye-Weon Yu, Marilyn J. Halonen and Ian L. Pepper*

12.1	Introduction	245
12.2	What is an Antibody?	246
12.2.1	Antibody Diversity	247
12.2.2	Antibody Specificity	247
12.2.3	Antibody Affinity	248
12.2.4	Polyclonal and Monoclonal Antibodies	248
12.2.5	Antiglobulins	250
12.3	Immunoassays	251
12.3.1	Fluorescent Immunolabeling	252
12.3.2	Enzyme-Linked Immunosorbent Assays	253
12.3.3	Competitive ELISA	254
12.3.4	Immunomagnetic Separation Assays	255
12.3.5	Western Immunoblotting Assays	256
12.3.6	Immunoaffinity Chromatography Assays	257
12.3.7	Immunocytochemical Assays	259
12.3.8	Immunoprecipitation Assays	259
12.3.9	Lateral Flow Immunoassay	261
12.4	Immunosensors	263
12.4.1	Surface Plasmon Resonance-Based Immunosensor	266
	Questions and Problems	267
	References and Recommended Reading	267

## 13 Nucleic Acid-Based Methods of Analysis

*Emily B. Hollister, John P. Brooks and Terry J. Gentry*

13.1	Structure and Complementarity of Nucleic Acids	271
13.2	Obtaining Microbial Nucleic Acids from the Environment	273
13.3	Hybridization-Based Assays	274
13.3.1	Marker Selection	274
13.3.2	Probe Construction and Detection	275
13.3.3	Dot, Southern and Northern Blots	276
13.3.4	Microarrays	276
13.3.5	Fluorescence <i>In Situ</i> Hybridization (FISH)	280
13.4	Amplification-Based Assays	280
13.4.1	The Polymerase Chain Reaction (PCR)	280
13.4.2	The Steps of PCR	281
13.4.3	PCR Assays	283
13.4.4	PCR Target Sequences	284
13.4.5	RNA Amplification Using PCR	287
13.4.6	Detection of Live vs. Dead Microorganisms	288
13.4.7	Other Nucleic Acid Amplification Methods	290
13.4.8	Challenges for PCR-Based Amplification Methods	290
13.5	DNA Fingerprinting	290
13.5.1	Fingerprinting of Microbial Isolates	291
13.5.2	Fingerprinting of Microbial Communities	293
13.6	Recombinant DNA Techniques	294
13.6.1	Cloning	294
13.6.2	Metagenomics	295
13.6.3	Reporter Gene Systems	296
13.7	Sequence Analysis	300
13.8	Choosing the Appropriate Nucleic Acid-Based Method	302
	Questions and Problems	302
	References and Recommended Reading	303

## Part IV

# Microbial Communication, Activities, and Interactions with Environment and Nutrient Cycling

## 14 Microbial Source Tracking

*Channah Rock, Berenise Rivera and Charles P. Gerba*

14.1	Water Quality and Fecal Contamination	309
------	---------------------------------------	-----

14.2	Microbial Source Tracking Methods	309	16.3.3	Ammonia Assimilation (Immobilization) and Ammonification (Mineralization)	354
14.3	Common Bacteria Used in Source Tracking Studies: <i>Bacteroides</i>	314	16.3.4	Ammonium Oxidation	358
14.4	Application of Source Tracking	315	16.3.5	Nitrate Reduction	360
	Questions and Problems	315	16.4	Sulfur Cycle	363
	References and Recommended Reading	315	16.4.1	Sulfur Reservoirs	363
<b>15 Microbial Transport in the Subsurface</b>			16.4.2	Assimilatory Sulfate Reduction and Sulfur Mineralization	364
<i>Charles P. Gerba, Ian L. Pepper and Deborah T. Newby</i>			16.4.3	Sulfur Oxidation	366
15.1	Factors Affecting Microbial Transport	319	16.4.4	Sulfur Reduction	367
15.1.1	Microbial Filtration	320	16.5	Iron Cycle	368
15.1.2	Physiological State	320	16.5.1	Iron Reservoirs	368
15.1.3	Microbial Adhesion—The Influence of Cell Surface Properties	321	16.5.2	Iron in Soils and Sediments	368
15.1.4	Impact of pH on Microbial Transport	325	16.5.3	Iron in Marine Environments	369
15.1.5	Impact of Ionic Strength on Transport	325	16.5.4	Iron Oxidation	369
15.1.6	Cellular Appendages	327	16.5.5	Iron Reduction	371
15.1.7	Hydrogeological Factors	327		Questions and Problems	371
15.1.8	Persistence and Activity of Introduced Microbes	329		References and Recommended Reading	372
15.2	Factors Affecting Transport of DNA	329	<b>Part V</b>		
15.3	Novel Approaches to Facilitate Microbial Transport	330	<b>Remediation of Organic and Metal Pollutants</b>		
15.3.1	Ultramicrobacteria	330	<hr/>		
15.3.2	Surfactants	330	<b>17 Microorganisms and Organic Pollutants</b>		
15.3.3	Gene Transfer	331	<i>Raina M. Maier and Terry J. Gentry</i>		
15.4	Microbial Transport Studies	331	17.1	Introduction	377
15.4.1	Column Studies	331	17.2	Environmental Law	378
15.4.2	Field Studies	332	17.3	The Overall Process of Biodegradation	380
15.4.3	Tracers	332	17.4	Contaminant Structure, Toxicity and Biodegradability	383
15.5	Models for Microbial Transport	334	17.4.1	Genetic Potential	383
15.5.1	Advection—Dispersion Models	334	17.4.2	Toxicity	384
15.5.2	Filtration Models	335	17.4.3	Bioavailability	385
	Questions and Problems	336	17.4.4	Contaminant Structure	387
	References and Recommended Reading	336	17.5	Environmental Factors Affecting Biodegradation	387
<b>16 Biogeochemical Cycling</b>			17.5.1	Redox Conditions	387
<i>Raina M. Maier</i>			17.5.2	Organic Matter Content	388
16.1	Introduction	339	17.5.3	Nitrogen	388
16.1.1	Biogeochemical Cycles	339	17.5.4	Other Environmental Factors	389
16.1.2	Gaia Hypothesis	340	17.6	Biodegradation of Organic Pollutants	390
16.2	Carbon Cycle	342	17.6.1	Pollutant Sources and Types	390
16.2.1	Carbon Reservoirs	342	17.6.2	Aliphatics	390
16.2.2	Carbon Fixation and Energy Flow	343	17.6.3	Alicyclics	397
16.2.3	Carbon Respiration	343	17.6.4	Aromatics	399
16.3	Nitrogen Cycle	352	17.6.5	Dioxins and PCBs	402
16.3.1	Nitrogen Reservoirs	353	17.6.6	Heterocyclic Compounds	403
16.3.2	Nitrogen Fixation	353	17.6.7	Pesticides	404

17.7	Bioremediation	404	18.12	Microbial Approaches in the Remediation of Metal-Contaminated Aquatic Systems	435
17.7.1	Addition of Oxygen or Other Gases	407		Questions and Problems	437
17.7.2	Nutrient Addition	408		References and Recommended Reading	438
17.7.3	Sequential Anaerobic–Aerobic Degradation	408	<b>19 Microbial Diversity and Interactions in Natural Ecosystems</b>		
17.7.4	Addition of Surfactants	409	<i>Terry J. Gentry, Ian L. Pepper and Leland S. Pierson III</i>		
17.7.5	Addition of Microorganisms or DNA	409	19.1	Microbial Communities	441
	Questions and Problems	411	19.2	Microbial Diversity in Natural Systems	442
	References and Recommended Reading	411	19.2.1	What is a Microbial Community?	442
<b>18 Microorganisms and Metal Pollutants</b>			19.2.2	What is Microbial Diversity?	442
<i>Timberley M. Roane, Ian L. Pepper and Terry J. Gentry</i>			19.2.3	What is a Species?	443
18.1	Metals in the Environment	415	19.2.4	Microbial Diversity in Soil and Ocean Environments	444
18.2	Cause for Concern	416	19.2.5	Environmental Factors that Impact Microbial Diversity	445
18.3	Metals Defined	416	19.2.6	Functional Diversity and the Resilience of Microbial Communities	446
18.3.1	The Essential Metals	417	19.3	Microbial Interactions	450
18.3.2	The Toxic Metals	417	19.3.1	Microbe–Microbe Interactions	450
18.3.3	The Nontoxic Nonessential Metals	418	19.3.2	Microbial Megacommunities	452
18.4	Metal Sources	418	19.3.3	Microbial Interactions Impacting Animal and Human Pathogens	457
18.4.1	Anthropogenic Sources	418	19.4	Microbial Diversity and Natural Products	457
18.4.2	Natural Sources	418		Questions and Problems	458
18.5	Metal Solubility, Bioavailability and Speciation	419		References and Recommended Reading	458
18.5.1	Metal Chemistry	420	<b>20 Microbial Communication: Bacteria/ Bacteria and Bacteria/Host</b>		
18.5.2	Cation Exchange Capacity	420	<i>Leland S. Pierson III, Raina M. Maier and Ian L. Pepper</i>		
18.5.3	Redox Potential	421	20.1	Introduction	461
18.5.4	pH	421	20.2	Signaling Via Quorum Sensing in Gram-Negative Bacteria	462
18.6	Metal Toxicity Effects on the Microbial Cell	422	20.2.1	N-acyl Homoserine Lactones (AHLs)	462
18.7	Mechanisms of Microbial Metal Resistance and Detoxification	422	20.2.2	Interspecies Cross-Signaling	466
18.7.1	General Mechanisms of Metal Resistance	423	20.2.3	Quorum Sensing in <i>Agrobacterium tumefaciens</i> , a Ubiquitous Plant Pathogen	467
18.7.2	Metal-Dependent Mechanisms of Resistance	425	20.3	Signaling in Gram-Positive Bacteria	468
18.8	Methods for Studying Metal–Microbial Interactions	426	20.3.1	Gamma-Butyrolactones	468
18.8.1	Culture Medium	426	20.3.2	Peptide Signaling	470
18.8.2	Measurement of Total, Soluble and Bioavailable Metal	427	20.4	Other Types of Signaling	471
18.9	Microbial Metal Transformations	429	20.4.1	Universal Signals Autoinducer-2 and Autoinducer-3	471
18.9.1	Oxidation-Reduction	429			
18.9.2	Methylation	431			
18.10	Physicochemical Methods of Metal Remediation	431			
18.11	Microbial Approaches in the Remediation of Metal-Contaminated Soils and Sediments	433			

20.4.2	Bacterial Muropeptides	473	22.2.9	Blue–Green Algae	520
20.4.3	Eavesdropping on the Party Line	474	22.3	Parasitology	521
20.4.4	Quorum Quenching and Quorum Sensing Inhibition	475	22.3.1	Protozoa	522
20.4.5	Interkingdom Signaling: Sociobiology and the Concept of Holobionts	476	22.3.2	Nematodes	528
20.5	Summary and Core Concepts	478	22.3.3	Cestodes ( <i>Taenia saginata</i> )	531
	Questions and Problems	479	22.3.4	Trematodes ( <i>Schistosoma mansoni</i> )	532
	References and Recommended Reading	479	22.4	Viruses	534
			22.4.1	Enteric Viruses	534
			22.4.2	Respiratory Viruses	540
			22.5	Fate and Transport of Enteric Pathogens in the Environment	544
				Questions and Problems	546
				References and Recommended Reading	546

## 21 Bioinformation and 'Omic Approaches for Characterization of Environmental Microorganisms

*Emily B. Hollister, John P. Brooks and Terry J. Gentry*

21.1	Introduction	483
21.2	Genomics and Comparative Genomics	484
21.3	Metagenomics	485
21.4	Transcriptomics	488
21.5	Proteomics	489
21.6	Metabolomics	490
21.7	Bioinformation	492
21.7.1	Bioinformatics and Analysis of Marker Gene Data	492
21.7.2	Bioinformatics and Analysis of Genomic/Metagenomic Data	499
21.7.3	Integration of 'Omics Data	501
	Questions and Problems	502
	References and Recommended Reading	502

## Part VI

### Water- and Foodborne Pathogens

#### 22 Environmentally Transmitted Pathogens

*Charles P. Gerba*

22.1	Environmentally Transmitted Pathogens	509
22.2	Bacteria	511
22.2.1	<i>Salmonella</i>	511
22.2.2	<i>Escherichia coli</i> and <i>Shigella</i>	512
22.2.3	<i>Campylobacter</i>	514
22.2.4	<i>Yersinia</i>	515
22.2.5	<i>Vibrio</i>	515
22.2.6	<i>Helicobacter</i>	516
22.2.7	<i>Legionella</i>	517
22.2.8	Opportunistic Bacterial Pathogens	518

#### 23 Indicator Microorganisms

*Charles P. Gerba*

23.1	The Concept of Indicator Organisms	551
23.2	Total Coliforms	552
23.2.1	The Most Probable Number (MPN) Test	553
23.2.2	The Membrane Filter Test	553
23.2.3	The Presence–Absence (P–A) Test	555
23.3	Fecal Coliforms and <i>Escherichia Coli</i>	556
23.4	Fecal Streptococci ( <i>Enterococci</i> )	556
23.5	<i>Clostridium Perfringens</i>	557
23.6	<i>Bacteroides</i> and <i>Bifidobacterium</i>	557
23.7	Heterotrophic Plate Count	558
23.8	Bacteriophages	559
23.9	Other Potential Indicator Organisms	560
23.10	Standards and Criteria for Indicators	560
	Questions and Problems	563
	References and Recommended Reading	563

#### 24 Risk Assessment

*Charles P. Gerba*

24.1	The Concept of Risk Assessment	565
24.2	Elements of Risk Analysis	565
24.3	The Process of Risk Assessment	568
24.3.1	Hazard Identification	568
24.3.2	Exposure Assessment	568
24.3.3	Dose–Response Assessment	569
24.3.4	Risk Characterization	572
24.4	Microbial Risk Assessment	572
	Questions and Problems	577
	References and Recommended Reading	578

## Part VII

# Wastewater Treatment and Disinfection

---

### 25 Municipal Wastewater Treatment

*Charles P. Gerba and Ian L. Pepper*

25.1	The Nature of Wastewater (Sewage)	583
25.2	Conventional Wastewater Treatment	586
