

Contents

Preface ix

Acknowledgements xi

1. The Biology of the Cell

- 1.1 Organisms' Composition 2
- 1.2 Deoxyribonucleic Acid, Genes, and Chromosomes 4
- 1.3 How the Amount of Messenger Ribonucleic Acid is Regulated 11
- 1.4 From Messenger Ribonucleic Acid to a Functional Protein 14
- 1.5 From Deoxyribonucleic Acid and Proteins to a Cell
with a Specific Function 15
- 1.6 Deoxyribonucleic Acid Differences Between Genomes 20
- 1.7 Diseases Due to Variations and Genome Mutations 21
- 1.8 Dominant or Recessive 22
- 1.9 Deoxyribonucleic Acid Outside the Nucleus: Bacterial Remains 22
- 1.10 Cell Lines and Cell Culture 27

2. Embryonic Development

- 2.1 Fertilization and Early Embryo Development 43
- 2.2 Sex Cells and Germ Cell Tumors 50

3. What Are Stem Cells?

- 3.1 What are the Properties of Stem Cells That Make Them Different
from Other Cells? 54
- 3.2 Totipotency and Pluripotency, and Embryonic Stem Cells 57
- 3.3 Multipotency, Unipotency, and Adult Stem Cells 62
- 3.4 Cell Division and Aging: The Role of Telomerase 63
- 3.5 The Relationship Between Cell Division and Differentiation: Epigenetics 63
- 3.6 Epigenetics in Stem Cells 66

4. Of Mice and Men: The History of Embryonic Stem Cells

- 4.1 How it All Began: Pluripotent Cells in Early Embryos 70
- 4.2 Mouse Embryonal Carcinoma Cell Lines 73
- 4.3 Pluripotent Cells in an Early Embryo 77
- 4.4 Mouse Embryonic Stem Cell Lines 79
- 4.5 Toward Human Embryonic Stem Cells 83

-
- 4.6 On the Road to Stem Cell Therapy 90
 - 4.7 Biased Interpretation 92
 - 4.8 The Future: Stem Cell Transplantation as a Clinical Treatment 93
 - 4.9 Breakthrough of the Decade in the Twenty-First Century: Induced Pluripotent Stem Cells 94

 - 5. Origins and Types of Stem Cells: What's in a Name?
 - 5.1 Pluripotent Stem Cells 102
 - 5.2 Multipotent Stem Cells 121

 - 6. Cloning: History and Current Applications
 - 6.1 Before Dolly 132
 - 6.2 Cloning Pets: Snuppy, Missy, and Copycat 148
 - 6.3 Just Imagine What Could Be 152
 - 6.4 Cloning Domestic Livestock 157
 - 6.5 Cloning Challenges 158

 - 7. Regenerative Medicine: Clinical Applications of Stem Cells
 - 7.1 Therapeutic Cell Transplantation 169
 - 7.2 Number of Cells Needed for Cell Transplantation 172
 - 7.3 Why Some Diseases will be Treatable with Stem Cells in the Future and Others Not 174
 - 7.4 The Best Stem Cells for Transplantation 189
 - 7.5 Combining Gene Therapy with Stem Cell Transplantation 193
 - 7.6 Where to Transplant Stem Cells and Their Effect 196
 - 7.7 Cell Types Available for Cell Transplantation 201
 - 7.8 Transplantation of Stem Cells: Where We Stand 206
 - 7.9 Risks Associated with a Stem Cell Transplantation 211
 - 7.10 Stem Cells Rejected After Transplantation 214
 - 7.11 Tissue Engineering 226

 - 8. Stem Cells in Veterinary Medicine
 - 8.1 Treatment of Family Pets 237

 - 9. Cardiomyocytes from Stem Cells: What Can We Do with Them?
 - 9.1 The Heart and Cardiac Repair 251
 - 9.2 From Pluripotent Stem Cells to Cardiomyocytes 263

 - 10. Adult Stem Cells: Generation of Self-Organizing Mini-Organs in a Dish
 - 10.1 Adult Stem Cells in Internal Organs 280
 - 10.2 Adult Stem Cells in the Intestine 283

- 10.3 Adult Stem Cells in Muscle Tissue 286
- 10.4 What We Have Learnt About Adult Stem Cells 288
- 10.5 The Future: Organoids to Repair Tissues and Organs 289

11. Stem Cell Tourism

- 11.1 Definition of Stem Cell Tourism 292
- 11.2 What's the Difference Between Trials and Treatment? 298
- 11.3 Perspective of the International Society for Stem Cell Research 313

12. Cancer Stem Cells: Where Do They Come From and Where Are They Going?

- 12.1 Cancer: Observations and Questions 316
- 12.2 Introduction to Stem Cells and Cancer 317
- 12.3 The Behavior of Cancer Cells: Not All Tumors and Not All Cells Within a Tumor Look the Same 321
- 12.4 Colon Adenoma: A Case in Point for the Role of an Adult Stem Cell as the Stem Cell of Origin 323
- 12.5 How to Become a Cancer Stem Cell: Epithelial Mesenchymal Transition 334
- 12.6 How Developmental Signal Transduction Pathways Become Active in Cancer Cells 335
- 12.7 Cancer Stem Cells as Circulating Tumor Cells 337
- 12.8 The Final Step: Initiation of Metastatic Growth 337
- 12.9 A Cancer Stem Cell: Can it Differentiate to Another Cell Type? 338
- 12.10 Cancer Stem Cells: Development of New Drugs to Treat Cancer 339
- 12.11 Conclusions and Research Challenges 341

13. Human Stem Cells for Organs-on-Chips: Clinical Trials Without Patients?

- 13.1 Introduction 344
- 13.2 Organs-on-Chips 345
- 13.3 Why We Need Human Organ and Disease-on-Chip Models 348
- 13.4 Human Organ-on-a-Chip Models for Certain Diseases 351
- 13.5 Human Disease Models as Organs-on-Chips: Challenges 352
- 13.6 Where We are Now with Organ-on-a-Chip Technology 352
- 13.7 Applications of Organs-on-Chips 358
- 13.8 Conclusion 360

14. Stem Cells for Discovery of Effective and Safe New Drugs

- 14.1 Drug Discovery: A Short Historical Perspective 364
- 14.2 Modern Drug Discovery 367
- 14.3 Challenges and Opportunities in Drug Discovery 369
- 14.4 How the Safety of New Drugs is Secured 375
- Acknowledgments 377

15. Patents, Opportunities, and Challenges: Legal
and Intellectual Property Issues Associated
with Stem Cells

- 15.1 Companies and Alliances 384
- 15.2 Patent Issues: Current Intellectual Property Landscape 385
 - 15.3 Europe Versus the United States 387
 - 15.4 More Legal and Ethical Issues 393
- Acknowledgments 395
- Further Reading 395

16. Stem Cell Perspectives: A Vision of the Future

- 16.1 Combining Technologies: New Human Disease Models
for Drug Discovery 402
- 16.2 Personalized Medicine and Safer Drugs 404
- 16.3 Final Note 406

Glossary 409
