

Contents

| | |
|--|----|
| 1. Preface and objectives | 1 |
| 2. Introduction to the subject area | 5 |
| 2.1. The comparison of small and large blast furnaces..... | 7 |
| 2.2. Thermal and chemical reserve zones in BF..... | 12 |
| 2.3. Temperature, gas composition and burden layer profile in BF..... | 16 |
| 2.4. The lowering of TRZ temperature in BF by using of SRP..... | 23 |
| 2.5. Hardening processes of iron ore agglomerate..... | 29 |
| 2.5.1. Fire-hardening..... | 30 |
| 2.5.2. Cement-bonded curing process..... | 30 |
| 3. Theoretical analysis | 33 |
| 3.1. Reduction kinetics of the conventional iron ore pellet..... | 33 |
| 3.2. Literature review on self-reducing pellet (SRP)..... | 34 |
| 3.2.1. Reduction mechanism and behavior of SRP..... | 34 |
| 3.2.2. Reduction kinetics of SRP under inert atmosphere..... | 37 |
| 3.2.3. Reaction model of SRP for blast furnace condition..... | 43 |
| 3.2.4. Volume change of SRP during reduction..... | 46 |
| 3.2.5. Cement bonded SRP and the strength requirement aspect of BF charging material..... | 47 |
| 3.2.6. SRP with embedded charcoal as the biomass charge in BF | 53 |
| 3.3. Modeling of the reduction kinetics of SRP..... | 54 |
| 4. Methodology of investigation | 59 |
| 4.1. The preparation of self-reducing pellet samples..... | 61 |
| 4.2. Experimental setup and the results analysis methods..... | 64 |
| 5. Experimental results and discussion | 72 |
| 5.1. Reduction behaviors of SRP under TRZ related conditions..... | 72 |
| 5.1.1. Isothermal reduction in the Tammann furnace..... | 72 |
| 5.1.2. Non-isothermal reduction in the Tammann furnace..... | 83 |
| 5.1.3. TG/DTA tests and the starting temperature of the Boudouard reaction..... | 86 |
| 5.2. Hardening and strength of SRP..... | 97 |

Contents

| | |
|--|------------|
| 5.2.1. Strength after fire-hardening process..... | 97 |
| 5.2.2. Strength after cement- bonded curing..... | 99 |
| 6. Modeling and calculation..... | 101 |
| 6.1. Calculation of the reduction kinetics model..... | 101 |
| 6.2. Calculation works based on the RIST diagram: the decreasing of reducing agent rate, after lowering TRZ temperature | 108 |
| 6.2.1. An initial simplified mathematical description for mass- and heat-balance | 109 |
| 6.2.2. A fully predictive mathematical description for mass- and heat-balance based on RIST's model | 116 |
| 6.2.3. Environmental aspects and resource efficiency | 126 |
| 7. Summarizing discussion and outlook..... | 129 |
| 8. Conclusions..... | 137 |
| 9. References..... | 139 |
| Appendix..... | 153 |
| Curriculum vitae..... | 172 |
| Abstract..... | 173 |
