

CONTENTS

Preface xi

1 Introduction 1

- 1-1* Role of Groundwater in Water Resource Systems and Their Management 2
- 1-2* Management of Groundwater Resources 10
- 1-3* Scope and Organization of Book 13

2 Groundwater and Aquifers 19

- 2-1* Definitions 19
- 2-2* Moisture Distribution in a Vertical Profile 22
- 2-3* Classification of Aquifers 24
- 2-4* Hydraulic Approach to Flow in Aquifers 26
- 2-5* Continuum Approach to Flow Through Porous Media 28
- 2-6* Inhomogeneity and Anisotropy 31

3 Groundwater Balance 34

- 3-1* Groundwater Flow and Leakage 35
- 3-2* Natural Replenishment from Precipitation 37
- 3-3* Return Flow from Irrigation and Sewage 41
- 3-4* Artificial Recharge 42
- 3-5* River–Aquifer Interrelationships 51
- 3-6* Springs 53
- 3-7* Evapotranspiration 57
- 3-8* Pumpage and Drainage 58
- 3-9* Change in Storage 59
- 3-10* Regional Groundwater Balance 59

4 Groundwater Motion 60

- 4-1 Darcy's Law 60
- 4-2 Hydraulic Conductivity 66
- 4-3 Aquifer Transmissivity 69
- 4-4 Flow in Anisotropic Aquifers 71
- 4-5 Dupuit Assumptions for a Phreatic Aquifer 74

5 Mathematical Statement of the Groundwater Forecasting Problem 83

- 5-1 Aquifer Storativity 84
- 5-2 Basic Continuity Equation 89
- 5-3 Initial and Boundary Conditions 94
- 5-4 Fundamental Equations for Flow in Aquifers 103
- 5-5 Complete Mathematical Statement of a Groundwater Flow Problem 116
- 5-6 Methods for Solving Groundwater Flow Problems 124
- 5-7 Superposition 152
- 5-8 Hydrologic Maps and Flow Nets 160
- 5-9 Relationships between Flows in Isotropic and Anisotropic Aquifers 169
- 5-10 Analytical Solutions of One-Dimensional Steady Flows in Aquifers 176
- 5-11 Land Subsidence 184

6 Flow in the Unsaturated Zone 190

- 6-1 Capillary Pressure and Retention Curves 191
- 6-2 The Motion Equation 206
- 6-3 Relative Permeability 209
- 6-4 The Continuity Equations 213
- 6-5 Mathematical Statement of Unsaturated Flow 218
- 6-6 Methods of Solution 221

7 Groundwater Quality Problem (Hydrodynamic Dispersion) 225

- 7-1 Dispersion Phenomena 227
- 7-2 Occurrence of Dispersion Phenomena 231
- 7-3 Coefficients of Dispersion 231
- 7-4 The Equation of Hydrodynamic Dispersion 239
- 7-5 Initial and Boundary Conditions 248
- 7-6 Mathematical Statement of a Groundwater Pollution Problem 250
- 7-7 Aquifer Dispersion Equation and Parameters 252
- 7-8 Methods of Solution 259
- 7-9 Some Simple Analytic Solutions 263
- 7-10 Movement of Water Bodies Injected into Aquifers 276

- 8 Hydraulics of Pumping and Recharging Wells 300**
- 8-1 Introduction 301
 - 8-2 Steady Flow to a Well in a Confined Aquifer 304
 - 8-3 Steady Flow to a Well in a Phreatic Aquifer 308
 - 8-4 Steady Flow to a Well in a Leaky Confined Aquifer 312
 - 8-5 Unsteady Flow to a Well in a Confined Aquifer 318
 - 8-6 Unsteady Flow to a Well in a Phreatic Aquifer 331
 - 8-7 Unsteady Flow to a Well in a Leaky Confined Aquifer 339
 - 8-8 Partially Penetrating Wells 344
 - 8-9 Multiple Well Systems 350
 - 8-10 Wells Near Boundaries Treated by the Method of Images 357
 - 8-11 Recharging and Pumping Wells in Uniform Flow 367
 - 8-12 Well Losses and Specific Well Discharge 374
 - 8-13 Hydraulics of Recharging Wells 377
- 9 Fresh Water–Salt Water Interface in Coastal Aquifers 379**
- 9-1 Occurrence 379
 - 9-2 Exact Mathematical Statement of the Problem 381
 - 9-3 The Ghyben–Herzberg Approximation 384
 - 9-4 Continuity Equation Based on the Dupuit Assumption 386
 - 9-5 Stationary Interface 393
 - 9-6 Approximate Solutions for a Moving Interface 406
 - 9-7 Upconing Below a Well Pumping Above an Interface 414
 - 9-8 Transition Zone 433
- 10 Modeling of Aquifer Systems 436**
- 10-1 The Need for Aquifer Models 437
 - 10-2 Model Calibration 439
 - 10-3 Classification of Aquifer Models 440
 - 10-4 Single Cell Models 442
 - 10-5 Multiple Cell Models 447
 - 10-6 Two Examples of Water Quality Models 455
- 11 Identification of Aquifer Parameters 463**
- 11-1 Statement of the Inverse Problem 463
 - 11-2 Pumping Tests 465
 - 11-3 Inverse Methods for Determining Regional Aquifer Parameters 482
- 12 Use of Linear Programming in Aquifer Management 491**
- 12-1 Brief Review of Linear Programming 492
 - 12-2 Application of Linear Programming to Aquifer Management 495
 - 12-3 Examples 501

Appendix A Derivation of the Basic Transport Equation by Averaging 513

Appendix B Averaging Along the Vertical 521

Problems (selected chapters) 523

Bibliography 541
