

CONTENTS

Series Editor's Introduction	v
Acknowledgments	vii
1. Introduction	1
2. Sample Design and Survey Data	3
Types of Sampling	4
The Nature of Survey Data	7
A Different View of Survey Data*	9
3. Complexity of Analyzing Survey Data	11
Adjusting for Differential Representation: The Weight	11
Developing the Weight by Poststratification	14
Adjusting the Weight in a Follow-Up Survey	17
Assessing the Loss or Gain in Precision: The Design Effect	18
The Use of Sample Weights for Survey Data Analysis*	20
4. Strategies for Variance Estimation	22
Replicated Sampling: A General Approach	23
Balanced Repeated Replication	26
Jackknife Repeated Replication	29
The Bootstrap Method	35
The Taylor Series Method (Linearization)	36
5. Preparing for Survey Data Analysis	39
Data Requirements for Survey Analysis	39
Importance of Preliminary Analysis	41
Choices of Method for Variance Estimation	43
Available Computing Resources	44
Creating Replicate Weights	47
Searching for Appropriate Models for Survey Data Analysis*	49
6. Conducting Survey Data Analysis	49
A Strategy for Conducting Preliminary Analysis	50
Conducting Descriptive Analysis	52
Conducting Linear Regression Analysis	57

Conducting Contingency Table Analysis	61
Conducting Logistic Regression Analysis	65
Other Logistic Regression Models	69
Design-Based and Model-Based Analyses*	74
7. Concluding Remarks	78
Notes	80
References	83
Index	88
About the Authors	91
