## Section A Biomolecular Interfaces for Cell Modulations

<b>Chapter 1 Protein-based Biointerfaces to Control Stem Cell Differentiation</b>	<b>3</b>
<i>Jorge Alfredo Uquillas Paredes, Alessandro Polini and Wojciech Chrzanowski</i>	
1.1 Modification of Biomaterial Surfaces with Proteins	3
1.1.1 Introduction	4
1.1.2 Influence of Modified Surfaces on Cell Adhesion	5
1.1.3 Influence of Modified Surfaces on Cell Proliferation and Differentiation	9
1.2 Methods of Protein Immobilization	11
1.2.1 Surface Functionalization	11
1.2.2 Determination of Successful Functionalization of Proteins, Growth Factors or Peptides	16
A Appendix: Protocols for the Visualization and Immobilization of Proteins	17
A.1 Protocol for the Visualization of Protein on a Surface Using Atomic Force Microscopy	17
A.2 A Protocol to Determine the Degree of Functionalization of Growth Factors and Small Peptides in Naturally Derived Type I Collagen Hydrogels	20
A.3 A Protocol to Immobilize Growth Factors and Small Peptides by 'Classic' Physisorption	21

---

RSC Smart Materials No. 10

Biointerfaces: Where Material Meets Biology

Edited by Dietmar Hutmacher and Wojciech Chrzanowski

<b>Chapter 2</b>	<b>Additive Manufacturing and Surface Modification of Biomaterials using Self-assembled Monolayers</b>	<b>30</b>
	<i>Jayasheelan Vaithilingam, Ruth D. Goodridge, Steven D. R. Christie, Steve Edmondson and Richard J. M. Hague</i>	
2.1	Introduction	30
2.1.1	Issues with Current Biomedical Implants	31
2.1.2	Scope of this Chapter	33
2.2	Additive Manufacturing	34
2.2.1	Selective Laser Melting	35
2.3	Surface Modification	40
2.3.1	Issues with Current Surface Modification Techniques	40
2.3.2	Surface Modification Using Self-assembled Monolayers	41
2.3.3	Functionalisation of Self-assembled Monolayers	44
2.4	Case Study	46
2.4.1	Functionalisation of Selective Laser Melted Parts with Ciprofloxacin using Self-assembled Monolayers	46
2.4.2	Surface Functionalisation using Ciprofloxacin	46
2.5	Conclusion	51
	References	51
<b>Chapter 3</b>	<b>Probing Biointerfaces: Electrokinetics</b>	<b>55</b>
	<i>Ralf Zimmermann, Jérôme F. L. Duval and Carsten Werner</i>	
3.1	Introduction	55
3.2	Fundamental Principles and Theory	56
3.2.1	Streaming Current and Streaming Potential Measurements in Rectangular Microchannels	56
3.2.2	Surface Conductivity	60

3.3	Electrokinetic Analysis to Unravel Electrosurface Phenomena at Biointerfaces	61
3.3.1	Segment Distribution of Stimuli-responsive Soft Thin Films	61
3.3.2	Composition and Structure of Biohybrid Hydrogels	64
3.3.3	Fluidity Modulation in Phospholipid Bilayers by Electrolyte Ions	66
3.4	Summary	69
A	Appendix: Methods	70
A.1	Measurement of Streaming Current/Potential	70
A.2	Simulations of the Electro-Hydrodynamics at Diffuse Soft Interfaces	70
A.3	Thin Polymer Films for Streaming Current/Potential Measurements	71
	References	71
<b>Chapter 4</b>	<b>Growth Factor Delivery Systems for the Treatment of Cardiovascular Diseases</b>	<b>74</b>
	<i>Natalia Zapata, Elisa Garbayo, Maria J. Blanco-Prieto and Felipe Prosper</i>	
4.1	Introduction	74
4.2	Drug Delivery Systems for Growth Factors	77
4.2.1	Growth Factors	78
4.2.2	Biomaterials	79
4.3	Growth Factor Drug Delivery Systems for Cardiac Applications	86
4.3.1	Angiogenesis	86
4.3.2	Direct Effect on Cardiac Cell Proliferation, Remodeling, Tissue Protection and Differentiation	88
4.3.3	Other Proteins	90
4.3.4	Combined Therapies	91
4.4	Growth Factor Delivery Systems and Cell Therapy	93
4.5	Conclusions	94
	Acknowledgements	95
	References	95
	<b>Section B Structural Biointerfaces</b>	
<b>Chapter 5</b>	<b>Titanium Phosphate Glass Microspheres as Microcarriers for <i>In Vitro</i> Bone Cell Tissue Engineering</b>	<b>105</b>
	<i>Nilay J. Lakhkar, Carlotta Peticone, David De Silva-Thompson, Ivan B. Wall, Vehid Salih and Jonathan C. Knowles</i>	
5.1	Introduction	105

5.2	Production of Titanium Phosphate Glass	
	Microspheres by Flame Spheroidisation	107
5.2.1	Materials	109
5.2.2	Equipment	109
5.2.3	Calculations of the Precursor Amounts	110
5.2.4	Preparation of Glass Microparticles	111
5.2.5	Design of Flame Spheroidisation Apparatus	112
5.2.6	Preparation of Glass Microspheres	113
5.2.7	Expected Outcomes and Other Considerations	114
5.3	Visualisation and Quantification of Microsphere Degradation by Time-lapse Imaging	115
5.3.1	Materials	116
5.3.2	Equipment	116
5.3.3	Setting Up a Time-lapse Experiment	117
5.3.4	Expected Outcomes and Other Considerations	120
5.4	Cell Culture of Microspheres with Bone Cells	121
5.4.1	Materials and Reagents	123
5.4.2	Equipment	123
5.4.3	Seeding of MG63 Cells on Microspheres	124
5.4.4	Sample Preparation for Scanning Electron Microscopy	126
5.4.5	Expected Outcomes and Other Considerations	127
5.5	Summary: On-going Work and Future Directions	128
	References	129
<b>Chapter 6</b>	<b>Biointerfaces Between Cells and Substrates in Three Dimensions</b>	<b>133</b>
	<i>Adam S. Hayward, Neil R. Cameron and Stefan A. Przyborski</i>	
6.1	The Structural and Physiological Relevance of Three-dimensional Biointerfaces	133
6.2	Using Natural and Synthetic Materials to Create Three-dimensional Biointerfaces	134
6.2.1	Sandwiching Cells with Extracellular Matrix Proteins	135
6.2.2	Hydrogels	136
6.2.3	Electrospun Polymer Fibres	136
6.2.4	Three-dimensional Printed Scaffolds	137
6.2.5	Porous Polymeric Scaffolds	138
6.2.6	Emulsion Templating and Alvetex <sup>®</sup>	139
6.3	Methods to Examine Cell Behaviour in Three Dimensions: Alvetex <sup>®</sup> Case Study	141
6.3.1	Imaging of Live Cells	141

6.3.2	Histology and Immunocytochemistry	143
6.3.3	Electron Microscopy	145
6.3.4	Metabolic Assays and Other Functional Experiments	146
6.3.5	Genomics and Proteomics	147
6.3.6	Cell Retrieval	147
6.4	Future Direction of Biointerfaces in Three Dimensions	148
	References	149

### Section C Multi-functional Biointerfaces

<b>Chapter 7</b>	<b>Interfaces in Composite Materials</b>	<b>153</b>
	<i>Ensanya A. Abou Neel, Wojciech Chrzanowski and Anne M. Young</i>	
7.1	Introduction	153
7.1.1	Biomedical Applications of Composites	154
7.2	Composite Interfaces	155
7.2.1	Filler–Matrix	156
7.2.2	Composite-surrounding Environment	157
7.3	State-of-the-Art ‘Talking’ to Living Organisms	160
7.3.1	Smart Composites Based on Biomimetic Matrices	161
7.3.2	On-demand Responsive Composites	161
7.3.3	Composites Based on Smart Fillers	163
7.3.4	Functionalized Composites	163
7.4	Interfaces of Clinical Importance	164
7.4.1	The Osteochondral Interface	164
7.4.2	Neuromuscular Prosthesis–Tissue Interface	168
7.4.3	Composite–Dentin Interface	169
7.5	Step-by-Step Preparation of an Example of Smart Composites	171
7.5.1	Synthesis of Poly(lactide- <i>co</i> -propylene glycol- <i>co</i> -lactide) co-oligomer	171
7.5.2	Methacrylation of Poly(lactide- <i>co</i> -propylene glycol- <i>co</i> -lactide) co-oligomer	172
7.5.3	Preparation of the Composite	172
7.6	Advances and Challenges	172
	References	173
<b>Chapter 8</b>	<b>Bioactive Conducting Polymers for Optimising the Neural Interface</b>	<b>192</b>
	<i>Josef Goding, Rylie Green, Penny Martens and Laura Poole-Warren</i>	
8.1	Introduction	192

8.2	Conducting Polymers	193
8.2.1	Mechanism of Conduction	193
8.2.2	Fabrication	194
8.2.3	Characterisation	196
8.2.4	Biomedical Applications of Conducting Polymers	201
8.2.5	Limitations of Conducting Polymers in Neural Interfaces	206
8.3	Biofunctionalisation of Conducting Polymers	206
8.3.1	Incorporation of Bioactive Molecules	206
8.3.2	Conducting Polymers as Bioactive Surfaces	208
8.3.3	Conducting Polymers as Drug Delivery Devices	209
8.3.4	Limitations of Biofunctionalised Conducting Polymers	210
8.4	Modified Biofunctional Conducting Polymers for Neural Interfaces	211
8.4.1	Structured Conducting Polymers	211
8.4.2	Conducting Polymer Composites	212
8.5	Conclusion	215
A	Appendix: Methodologies and Practical Advice	215
A.1	Fabrication: Electrochemical Deposition	216
A.2	Characterisation	216
	References	218

## **Chapter 9 Polycaprolactone-based Scaffolds Fabricated Using Fused Deposition Modelling or Melt Extrusion Techniques for Bone Tissue Engineering** 221

*Patrina S. P. Poh, Michal Bartnikowski, Travis J. Klein, Giles T. S. Kirby and Maria A. Woodruff*

9.1	Introduction	221
9.1.1	Bone Tissue Engineering	221
9.1.2	Polymers Used in Bone Tissue Engineering	222
9.2	Scaffold Fabrication Techniques	223
9.2.1	Principles of Additive Manufacturing: Fused Deposition Modelling and Melt Extrusion	224
9.3	Polycaprolactone Scaffolds	227
9.3.1	Physical Characteristics of Polycaprolactone Scaffolds	227
9.3.2	Polycaprolactone Scaffold <i>In Vitro</i> Analysis	229
9.4	Polycaprolactone-based Composite Scaffolds	230
9.4.1	Polycaprolactone with Hydroxyapatite	230
9.4.2	Polycaprolactone with Tricalcium Phosphate	231

9.5	Surface Functionalisation of Polycaprolactone-based Scaffolds	237
9.5.1	Polycaprolactone with Bone Marrow Aspirate	237
9.5.2	Polycaprolactone with Heparin	237
9.5.3	Collagen-mimetic Peptide: The Peptide Sequence GFOGER	238
9.5.4	Plasma Modification and Fibronectin Coating	238
9.5.5	Hydroxyl Functionalisation	239
9.5.6	Carbonated Hydroxyapatite–Gelatin Composite	240
9.5.7	Phlorotannin Conjugations	240
9.6	Polycaprolactone-based Scaffolds as Drug Carriers	240
9.6.1	Antibiotics	240
9.6.2	Adeno-associated Virus Encoding Bone Morphogenetic Protein-2	241
9.6.3	Bone Morphogenetic Protein	242
9.7	Advanced Scaffold Architecture	246
9.7.1	Scaffolds with Vascular Channels	246
9.7.2	Hybrid Osteochondral Scaffolds	247
9.8	Clinical Studies	249
9.9	Conclusions	249
A	Appendix: Methods Section	250
A.1	Mixing Polycaprolactone with Bioactive Glass Particles by Fast Precipitation into Excess 100% Ethanol	250
A.2	Mathematical Derivation of Melt Extruded Scaffold Microfilament Diameter from Translational Velocity	251
	Acknowledgements	252
	References	252

## Section D Chemo-structural Biointerfaces

<b>Chapter 10</b>	<b>High Throughput Techniques for the Investigation of Cell–Material Interactions</b>	<b>259</b>
	<i>Lauren R. Clements, Helmut Thissen and Nicolas H. Voelcker</i>	
10.1	Introduction	259
10.1.1	Influence of Material Surface Chemistry and Topography on Cell Behaviour	260
10.1.2	Stem Cell–Material Surface Interactions	262
10.1.3	Screening of Cell–Surface Interactions: An Overview of High-throughput Techniques	265
10.2	Gradient Surfaces	267
10.2.1	Topography Gradients	269

10.2.2	Chemical Gradients	280
10.2.3	Biological Density Gradients	292
10.2.4	Two-dimensional Chemical Gradients	295
10.2.5	Topography: The Chemistry of Two-dimensional Gradients	296
10.2.6	Two-dimensional Topography Gradients	299
10.3	Conclusions	300
	References	301
<b>Chapter 11 Grafting of Functional Monomers on Biomaterials</b>		<b>312</b>
<i>Lisbeth Grøndahl and Jing Zhong Luk</i>		
11.1	Introduction	312
11.2	Methods for Grafting of Functional Monomers	313
11.2.1	Simultaneous Grafting	313
11.2.2	Peroxy/hydroxyl Grafting	318
11.2.3	Controlled Radical Polymerisation Grafting from a Surface	320
11.2.4	Plasma Polymerisation	322
11.2.5	Grafting of Functional Monomers to Porous Substrates	325
11.3	Characterisation of Grafted Materials	326
11.3.1	Chemical Characterisation of Surfaces	328
11.3.2	Physical Characterisation of Surfaces	332
11.3.3	Characterisation of Grafted Chains	332
11.3.4	Lateral Distribution of Grafted Chains	333
11.3.5	Penetration Depth of Grafted Chains	335
11.4	Concluding Remarks	337
	Acknowledgements	337
	References	337
<b>Chapter 12 Design of Mobile Supramolecular Biointerfaces for Regulation of Biological Responses</b>		<b>343</b>
<i>Ji-Hun Seo and Nobuhiko Yui</i>		
12.1	Introduction	343
12.2	Hydrated Viscoelastic Factor of Polymeric Biomaterials	346
12.3	Designing Dynamic Surface for Regulation of Hydrated Viscoelastic Factor	348
12.4	Biological Responses on the Dynamic Surfaces	350
12.4.1	The Effect of Hydrated Viscoelastic Properties on Fibrinogen Adsorption	350
12.4.2	Platelet Responses on the Dynamic Surfaces	354

12.4.3	Adsorption and Adhesion Behavior of Fibronectin and Human Umbilical Vein Endothelial Cell on the Dynamic Surfaces	355
12.4.4	The Effect of Hydrated Viscoelastic Properties on the Adhering Morphology of the Fibroblasts	358

## Section E Interfaces that Control Bacterial Responses

<b>Chapter 13</b>	<b>Bacterial Adhesion and Interaction with Biomaterial Surfaces</b>	<b>365</b>
	<i>Li-Chong Xu and Christopher A. Siedlecki</i>	
13.1	Introduction	365
13.2	Bacterial Adhesion and Biofilm Formation on Biomaterial Surfaces	367
13.2.1	Adherence of Planktonic Bacterial Cells to Surfaces	367
13.2.2	Accumulation and Proliferation of Bacterial Cells	368
13.2.3	Maturation and Dispersal of Biofilm	369
13.3	Factors Influencing Bacterial Adhesion and Interaction with Biomaterial Surfaces	371
13.3.1	Biomaterial Surface Properties Affect Bacterial Adhesion	371
13.3.2	Effect of Plasma Proteins on Bacterial Adhesion on Biomaterial Surface	372
13.3.3	Interaction of Bacteria and Platelets on Biomaterial Surfaces	374
13.4	Inhibition of Bacterial Adhesion by Textured Biomaterial Surfaces	378
13.4.1	Background	378
13.4.2	Principles of the Inhibition of Bacterial Adhesion by Textured Surfaces	379
13.4.3	Bacterial Adhesion and Biofilm Formation on Textured Surfaces	380
13.5	Bacterial Adhesion Assay Methods and Techniques Used in Studying Bacteria–Material Interactions	382
13.5.1	Static Fluid Bacterial Adhesion Assay	383
13.5.2	Dynamic Fluid Bacterial Adhesion Assay	383
13.5.3	Atomic Force Microscopy	385
13.6	Summary	387

A	Appendix: Methods	388
A.1	Typical Parameters for AFM Imaging of Microphase Separation Structure in Polyurethane Biomaterial Surfaces in Solution	388
A.2	Immobilization of Bacterial Cells on an AFM Probe	389
A.3	Functionalization of an AFM Probe with Antibodies	389
	Acknowledgements	390
	References	390
<b>Chapter 14</b>	<b>Antimicrobial Interfaces</b>	<b>399</b>
	<i>Sabeel P. Valappil</i>	
14.1	Introduction	399
14.2	Bacterial Interfaces	400
	14.2.1 Quorum Sensing	401
	14.2.2 Production of Biofilm Matrix	402
	14.2.3 Biofilm Dispersion	403
14.3	Biofilm Infection	404
14.4	Biofilm Antimicrobial Surface Interfaces	405
14.5	Challenges of Antimicrobial Material Design	406
	14.5.1 Anti-adhesive surfaces	406
	14.5.2 Contact-active Materials	409
	14.5.3 Controlled-drug Delivery Agents	410
14.6	The Interface Between Veterinary and Human Antibiotic Use	411
14.7	Strategies to Control Antimicrobial Resistance	411
	14.7.1 Role of Antibacterial Metal Ions	412
14.8	Future Directions	412
	Acknowledgements	416
