Chapter 1

Roles of Vitamins as Coenzymes

William Shive and Edwin M. Lansford, Jr.

1. Introduction	1
2. Biotin	2
3. Nicotinic Acid	5
4. Pantothenic Acid	12
5. Vitamin B ₆	19
5.1. Decarboxylation	21
5.2. Side-Chain Cleavage	21
5.3. Loss of an α -Hydrogen	22
6. Thiamine	26
7. Lipoic Acid	30
8. Folic Acid	33
9. Vitamin B ₁₂	39
9.1. Transfer and Reactions of Methyl Groups	40
9.2. Rearrangements	42
10. Riboflavin	46
11. Coenzyme Q	52
12. Other Vitamin Cofactors	54
12.1. Vitamin K	54
12.2. Ascorbic Acid	55
13. References	55

Chapter 2

Vitamin C

Robert Edgar Hodges

1. The Lure of Vitamin C	73
2. Discovery of Vitamin C	74
3. Biochemistry and Physiology	77
4. Metabolic Functions of Vitamin C	78
4.1. Excretion of Ascorbic Acid and Its Metabolites	79

5. Minimal Daily Requirement and Recommended Allowance	80
6. Scurvy in Experimental Animals	81
7. Clinical Scurvy	82
8. Human Scurvy	82
9. Food Sources of Vitamin C	84
10. Pharmacologic Doses	87
11. Toxicity of Vitamin C	89
12. Summary	92
13. References	93

Chapter 3

Vitamin A

George Wolf

1. Historical Introduction	97
2. Nomenclature, Chemical Structures, and Chemical Properties	100
3. Absorption	103
3.1. Absorption of Carotenes and Their Conversion to Retinol	103
3.2. Absorption of Preformed Vitamin A	106
4. Storage	108
5. Transport of Vitamin A	111
6. Vitamin A Deficiency and the Function of Vitamin A	120
6.1. Vision	120
6.2. Bone and Nerves (Including Cerebrospinal Fluid)	129
6.3. Reproduction	132
6.4. Epithelial Growth and Differentiation	136
6.5. Vitamin A Deficiency and Growth	144
6.6. Vitamin A Deficiency in Man	146
6.7. Production of Vitamin A Deficiency in Experimental Animals	150
7. Biochemical Mechanisms of Vitamin A Function	152
7.1. Enzymes	152
7.2. Cofactors and Substrates	153
7.3. Serum Proteins	154
7.4. An Approach through Molecular Biology	154
8. The Metabolism of Vitamin A	162
8.1. Conversion to Active Forms	163
8.2. Conversion to Excreted Forms	168
8.3. Turnover, Half-Life, and Body Pool of Vitamin A	171
9. The Retinoids	175
10. Hypervitaminosis A and Vitamin A Toxicity	178
10.1. Effects on Bone and Cartilage	178
10.2. Congenital Malformations	180
10.3. Hemorrhages	181

10.4. Other Effects	181
10.5. Vitamin A Requirement and Toxicity in Man	181
11. Vitamin A Pharmacology	184
11.1. Vitamin A and Cancer	184
11.2. Vitamin A and Skin Diseases	189
11.3. Vitamin A and Detoxication	190
11.4. Vitamin A and Oral Contraceptive Agents	190
11.5. Vitamin A and the Immune Response (to Infection and Cancer)	191
12. References	193

Chapter 4

Vitamin D

Hector F. DeLuca

1. Introduction	205
2. History	206
3. Deficiency Diseases	207
4. The D Vitamins and Their Precursors	208
5. Metabolism of Vitamin D	211
5.1. Absorption and Transport	211
5.2. Excretion of Vitamin D	212
5.3. Production of Vitamin D ₃ in Skin	212
5.4. Metabolism of Vitamin D to Its Metabolically Active Form(s)	213
5.5. Vitamin D ₂	216
6. Regulation of Vitamin D Metabolism	216
6.1. Role of Vitamin D and Its Metabolites	216
6.2. Regulation of Vitamin D Metabolism by Calcium	217
6.3. Regulation by Parathyroid Hormone	218
6.4. Regulation of Vitamin D Metabolism by Phosphate	218
6.5. Molecular Mechanism of Regulation of the Renal Hydroxylases of 25-OH-D ₃	219
7. The Interaction between Vitamin D and Parathyroid Hormone	220
8. Regulation of the Renal Vitamin D Hydroxylases by the Sex Hormones	222
9. Mechanism of Vitamin D Action	224
9.1. Overall Physiologic Function of Vitamin D	224
9.2. Intestinal Calcium Transport	225
9.3. Intestinal Phosphate Transport	228
9.4. Bone Calcium Mobilization System	228
9.5. Metabolites and Analogs of Vitamin D and Their Effects on Intestine and Bone	229
10. Diseases of Bone as a Consequence of Defects in Vitamin D Metabolism	231

10.1.	Renal Osteodystrophy	231
10.2.	Hypoparathyroidism and Pseudohypoparathyroidism	232
10.3.	Autosomal Recessive Vitamin-D-Dependency-Resistant Rickets	232
10.4.	Hypophosphatemic Vitamin-D-Resistant Rickets	232
10.5.	Dilantin- and Phenobarbital-Induced Bone Disease	233
10.6.	Osteoporosis: Steroid-Induced and Postmenopausal	233
10.7.	Summary of Clinical Uses of Vitamin D Metabolites	233
11.	Vitamin D Toxicity	234
12.	Conclusion	235
13.	References	236

Chapter 5

Vitamin E

L. J. Machlin and M. Brin

1.	History	245
2.	Chemistry and Nomenclature	246
3.	Deficiency Symptoms	247
4.	Biopotency	248
5.	Food Sources	249
6.	Metabolism	251
6.1.	Absorption, Transport, and Tissue Deposition	251
6.2.	Metabolism	252
7.	Biochemical Function	253
7.1.	Interrelationship with Polyunsaturated Fatty Acids (PUFA), Antioxidant Role, and Membrane Function	253
7.2.	Nucleic Acid and Protein Metabolism	256
7.3.	Mitochondrial Function	257
7.4.	Relationship to Hormones	257
7.5.	Interrelationship with Selenium and Sulfur Amino Acids	257
8.	Nutritional Role	258
8.1.	Deficiency States in Man	258
8.2.	Protection against Oxygen, Ozone, and Nitrogen Dioxide	260
8.3.	Protection against Nitrosamines, Lead, and Mercury	261
8.4.	Drug Interrelationships	261
8.5.	Influence on Disease Resistance	261
8.6.	Relationship to Aging	261
8.7.	Nutritional Requirements	262
9.	Pharmacological Effects	263
10.	Safety	264
11.	References	265

Chapter 6
Vitamin K
Robert E. Olsen

1. Introduction	267
2. Early History	267
3. Chemistry of the K Vitamins	268
4. Nomenclature	269
5. Principles of the Determination of Vitamin(s) K	270
5.1. Physicochemical Methods	270
5.2. Biological Methods	270
6. Vitamin K Content of Foods	272
7. Absorption, Distribution, and Metabolism of Vitamin K	273
8. Physiological Function of Vitamin K	274
9. Bone and Kidney Proteins Containing γ -Carboxyglutamate	277
10. Coumarin Anticoagulant Drugs	278
11. Vitamin K Deficiency	279
12. Nutritional Requirements for Vitamin K	280
13. References	281

Chapter 7
Iron-Hemoglobin
Hilda S. White

1. Introduction	287
2. Iron Balance	287
3. Distribution and Function of Body Iron	288
3.1. Functional Iron	288
3.2. Storage Iron	288
4. Iron Losses	289
5. Assessment of Iron Status	290
5.1. Functional Iron	290
5.2. Iron Stores	292
6. Iron Absorption	297
6.1. Intraluminal Factors	297
6.2. Corporeal and Mucosal Factors	299
6.3. Heme Iron Absorption	301
6.4. Measurement of Iron Absorption	301
6.5. Food Iron Absorption	301
7. Pathology of Iron Deficiency and Anemia	304
7.1. Iron Deficiency without Anemia	304
7.2. Iron-Deficiency Anemia	305
7.3. Iron Deficiency, Infection, and Immunity	306

8. Iron Requirements—Dietary Iron	307
8.1. Recommended Iron Intakes	307
8.2. Iron Fortification of Foods	309
9. Conclusion	311
10. References	312

Chapter 8

Trace Elements

Susanne K. Czarnecki and David Kritchevsky

1. Introduction	319
2. Calcium	319
3. Phosphorus	321
4. Magnesium	322
5. Sodium and Potassium	323
6. Iron	326
7. Zinc	327
8. Copper	328
9. Selenium	332
10. Cobalt	333
11. Silicon	333
12. Chromium	334
13. Vanadium	335
14. Nickel	336
15. Manganese	337
16. Fluoride	338
17. Tin	339
18. Conclusion	339
19. References	340

Chapter 9

Drug-Nutrient Interrelationships

John F. Mueller

1. Introduction	351
2. The Effects of Drugs on Nutritional Status	352
2.1. Effects on Taste, Appetite, and Gastrointestinal Symptomatology	352
2.2. Morphologic and Physiologic Aberrations	352
3. The Effects of Nutritional Status on Drug Metabolism	355
4. Summation	362
5. References	362

Chapter 10

Oral Contraceptives and Nutrient Requirements

Lilla Aftergood and Roslyn B. Alfin-Slater

1. Introduction	367
2. Effect of OCs on Nutrient Metabolism and Requirements	368
2.1. Vitamins	368
2.2. Minerals	378
2.3. Proteins	380
2.4. Lipids	382
2.5. Carbohydrates	385
3. Conclusion	387
4. References	388

Chapter 11

Nutrition of the Elderly

E. Neige Todhunter

1. Introduction	397
2. Changes Associated with Aging	398
3. Influence of Nutrition on Longevity	399
4. Nutrient Requirements of the Elderly	400
4.1. Energy	400
4.2. Protein and Amino Acids	401
4.3. Minerals	402
4.4. Fat-Soluble Vitamins	404
4.5. Water-Soluble Vitamins	405
4.6. Fluid Intake	406
4.7. Dietary Fiber	407
5. Assessment of Nutritional Status of the Elderly	407
5.1. Dietary Studies	407
5.2. Biochemical Determinations	409
5.3. Sex Differences in Nutritional Response	410
6. Nutrition-Related Diseases of the Elderly	411
7. Food Attitudes, Beliefs, and Practices of the Elderly	413
8. References	414

<i>Index</i>	419
---------------------------	-----

Chapter 10

Oral Contraceptives and Nutrient Requirements

Lilla Aftergood and Roslyn B. Alfin-Slater

1. Introduction	367
2. Effect of OCs on Nutrient Metabolism and Requirements	368
2.1. Vitamins	368
2.2. Minerals	378
2.3. Proteins	380
2.4. Lipids	382
2.5. Carbohydrates	385
3. Conclusion	387
4. References	388

Chapter 11

Nutrition of the Elderly

E. Neige Todhunter

1. Introduction	397
2. Changes Associated with Aging	398
3. Influence of Nutrition on Longevity	399
4. Nutrient Requirements of the Elderly	400
4.1. Energy	400
4.2. Protein and Amino Acids	401
4.3. Minerals	402
4.4. Fat-Soluble Vitamins	404
4.5. Water-Soluble Vitamins	405
4.6. Fluid Intake	406
4.7. Dietary Fiber	407
5. Assessment of Nutritional Status of the Elderly	407
5.1. Dietary Studies	407
5.2. Biochemical Determinations	409
5.3. Sex Differences in Nutritional Response	410
6. Nutrition-Related Diseases of the Elderly	411
7. Food Attitudes, Beliefs, and Practices of the Elderly	413
8. References	414
