1	Second Language Acquisition <i>Facit Saltus</i> ('Takes a Leap')	1
1.1	Preview of the Volume: Second Language Acquisition in Adulthood is a Discontinuous Process	1
1.2	The Term 'Discontinuity' and its Meaning for SLA	3
1.3	The Core Idea of the Discontinuity Hypothesis	5
1.4	'Gemination' of the Same Twice-learned Items in a Learner's Competence	8
1.5	Second Language Acquisition is 'Quantized'	9
1.6	Falsifiability Criteria for the Discontinuity Hypothesis	11
1.7	Increasing Amount of Exposure to Input Cannot Explain All Developmental Transition States	15
1.8	Discontinuity is Neither Automatization Nor Restructuring	17
1.9	Discontinuity Does Not Mirror the Lexicon/Grammar Distinction	19
1.10	Discontinuity Operationalizes Two Different Kinds of L2 Grammar	20
1.11	Discontinuity Differs From Developmental Theories of 'Incrementalism'	22
1.12	Diagnostics of Discontinuity	24
1.13	Discontinuity and Individual Differences	28
1.14	Credits	31
1.15	Breakdown of the Volume	39
2	Discontinuity as Chunks Feed into Grammar	43
2.1	Chapter Preview: Frequency Takes the Floor	43
2.2	Three Aspects of the 'Frequency Factor' in Language Processing and Language Acquisition	44
2.3	Chunks, Not Formulas, Are the Building Blocks of SL	45

2.4	Chunks Feed into L2 Grammar	48
2.5	Chunks Feed into L2 Constructions	51
2.6	One Example of Geminatio of TL Representation in L2 Italian	52
2.7	How Much Grammar Can Be Found in Chunks and Constructions?	58
2.8	Chunking (and SL) Operates on Sociolinguistic Variants as Well	60
2.9	To Sum Up: Some Language Properties Are Not a Property of Input	62
3	Discontinuity in the <i>Maturing</i> and in the <i>Adapting</i> Brain	64
3.1	Chapter Preview: Discontinuity Across a Learner's Age	64
3.2	Beyond the 'Fundamental Difference' Versus 'Full Access' Debate	66
3.3	Learning by Patches is Typical of Adult SLA	68
3.4	Discontinuity in Brain Maturation and Brain Adaptation	69
3.5	The Difference Between a 'Sensitive' and a 'Critical' Period for Language Acquisition	70
3.6	Discontinuity in the Maturing Brain	72
3.7	Lifelong Effects of the Early Acquisition of Additional Languages	78
3.8	Discontinuity and an Adult's Brain Adaptation	80
3.9	The Critical Period Hypothesis Revised	81
3.10	Specific Features of SLA in Adulthood	84
3.11	To Sum Up: The Balance Between Loss and Compensation in Late SLA	93
4	Discontinuity and the Neurocognition of Second Language	96
4.1	Chapter Preview: Discontinuity Fits a Divergence Model of L1–L2 Acquisition	96
4.2	The Notion of Convergence and the Single-network Hypothesis	97
4.3	The Notion of Divergence and the Declarative/ Procedural Model	98
4.4	The Declarative/Procedural Model	99
4.5	Problems with the DPM (and Possible Integrations)	108
4.6	Discontinuity and L2 Neurocognition: Experimental Studies	114
4.7	Studies Questioning the Developmental Relevance of the N400/P600 Dichotomy	123

4.8	What is Learned at Discrete Stages of Learning is Just Combinatorial Grammar	124
4.9	The N400–P600 Dichotomy Could Reveal L1–L2 Common Processing Strategies	128
4.10	A Different View of the N400–P600 ‘Biphasic Pattern’: Neural Cues of Geminata in L2 Processing and Representations	129
4.11	To Sum Up: SL and GL Divide the Labor of SLA in Adulthood	131
5	Statistical Learning of a Second Language	135
5.1	Chapter Preview: What Parts of the L2 Are Affected by SL?	135
5.2	The Distinction Between Combinatorial and Non-combinatorial Grammar	136
5.3	Second Language Acquisition as a Form of Supervised SL	138
5.4	Did the SL Approach Change the Problem of Language Acquisition?	139
5.5	Is Probabilistic Information also Relevant to the Structural Properties of the Language?	140
5.6	Syntax that Can Be Learned Statistically (in a Miniature Artificial Grammar)	143
5.7	The Potential Contribution of SL for the Acquisition of L2 Syntax	146
5.8	On Syntax as ‘Structural Integration’: P600 Effects also Signal Identical Violations in Non-linguistic Domains	151
5.9	Are the Patterns that Statistical Learners Extract from the Input Actually ‘Syntactic Structures’?	154
5.10	Adjacency, Non-adjacency and SL	158
5.11	Non-adjacent Dependencies in SL Correspond to What We Have Previously Labeled as Combinatorial Grammar	161
5.12	Neural Correlates of the Processing of Supra-regular (Phrase-Structures) Versus Regular (Finite State) Grammars	166
5.13	What ‘L2 Chunks Feed Into Grammar’ Means in the Perspective of SL	172
5.14	To Sum Up: The Distinctive Features of SL and Discontinuity in SLA	175

6	Parts of L2 Grammar That Resist Statistical Learning	178
6.1	Chapter Preview: Two Kinds of Grammar, Two Kinds of Learning	178
6.2	The Discontinuity from Statistical ‘Counting’ to Grammatical ‘Computation’	179
6.3	The Switch Between Concatenation and ‘External Merge’	180
6.4	Discontinuity and Downstream, Top-down L2 Processing	188
6.5	The Benefits of Frequency Do Not Extend to Displaced Items (‘Internal Merge’) and to Empty Categories	190
6.6	There are Parts of the Second Language that Cannot Be Learned like a Song	196
6.7	Non-combinatorial Grammar and Non-adjacency of Items in a Sentence	197
6.8	Non-combinatorial Grammar and Long-distance Dependencies: The Shallow Structure Hypothesis	198
6.9	Non-combinatorial Grammar at the Interfaces	204
6.10	Non-combinatorial Grammar and Uninterpretable Features	213
6.11	Non-combinatorial Grammar and Functional Morphology: The ‘Bottleneck’ Hypothesis	215
6.12	Is Non-combinatorial Grammar Important for SLA?	216
6.13	To Sum Up: Whether Something Can Be Learned or Not Depends on How it Can Be Learned	218
	Conclusions	220
