Contents

1. Introduction 1

2. Models 4
   2.1 The Purpose and Nature of Models 4
   2.2 Enzyme-Catalyzed Reactions and the Michaelis-Menten Kinetics 6
   2.3 Transport Across Membranes: A Black-Box Approach 9
   2.4 Excitation of the Nervous Membrane: Hodgkin-Huxley Equations 13
   2.5 A Cooperative Model for Nerve Excitation 17
   2.6 The Volterra-Lotka Model 20
   2.7 A Model for the Control of Metabolic Reaction Chains 24

3. Thermodynamics 30
   3.1 Thermodynamics Systems 30
   3.2 The First Law of Thermodynamics 31
   3.3 The Second Law of Thermodynamics 34
   3.4 Temperature and Transfer of Heat 36
   3.5 Chemical Potential and the Transfer of Matter 41
   3.6 Chemical Reactions 43
   3.7 Some Basic Relations of Equilibrium Thermodynamics 45
   3.8 Perfect Gases and Ideal Mixtures 48
   3.9 Linear Irreversible Thermodynamics 50

4. Networks 55
   4.1 Network Language and Its Processes 55
   4.2 Storage Elements: Generalized Capacitances 56
   4.3 Kirchhoff's Current Law and the 0-Junction 59
   4.4 Unimolecular Reactions 60
   4.5 Higher-Order Reactions, Kirchhoff's Voltage Law and the 1-Junction 62
   4.6 Diffusion 65

5. Networks for Transport Across Membranes 69
5.1 Pore Models 69
5.2 Pore Blocking 71
5.3 Self-Blocking of Pores 76
5.4 Carrier Models 80
5.5 Active Transport 82
5.6 Hodgkin-Huxley Equations and the Coupling of Material and Electric Flux 85
5.7 Nernst-Planck Equations 89
5.8 The Photoreceptor Potential 95

6. Feedback Networks 99
6.1 Autocatalytic Feedback Loops 99
6.2 An Autocatalytic Excitation Model 103
6.3 Networks of A1-Elements 106
6.4 Limit Cycle Networks 109

7. Stability 115
7.1 Capacitances as Thermodynamic Equilibrium Systems 115
7.2 Stability of the Equilibrium State 120
7.3 Tellegen's Theorem and Liapunov Stability of the Equilibrium 123
7.4 Glansdorff-Prigogine Criterion for the Stability of Nonequilibrium Steady States 126
7.5 Uniqueness of Steady States 129
7.6 Globally and Asymptotically Stable Networks 133
7.7 Global Stability Techniques 136
