1	Some Basic Remarks	1
1.1	Motivation	1
1.2	Rounding Errors	6
1.3	Methodological Errors	8
1.4	Stability	9
1.5	Concluding Remarks	12
	References	13
 Part I Deterministic Methods		
2	Numerical Differentiation	17
2.1	Introduction	17
2.2	Finite Differences	18
2.3	Finite Difference Derivatives	20
2.4	A Systematic Approach: The Operator Technique	22
2.5	Concluding Discussion	25
	Summary	27
	Problems	28
	References	28
3	Numerical Integration	29
3.1	Introduction	29
3.2	Rectangular Rule	30
3.3	Trapezoidal Rule	33
3.4	The SIMPSON Rule	35
3.5	General Formulation: The NEWTON-COTES Rules	36
3.6	GAUSS-LEGENDRE Quadrature	38
3.7	An Example	44
3.8	Concluding Discussion	45
	Summary	47
	Problems	48
	References	49

4	The KEPLER Problem	51
4.1	Introduction	51
4.2	The Problem	52
4.3	Numerical Treatment	54
	Summary	59
	References	59
5	Ordinary Differential Equations: Initial Value Problems	61
5.1	Introduction	61
5.2	Simple Integrators	62
5.3	RUNGE-KUTTA Methods	66
5.4	Hamiltonian Systems: Symplectic Integrators.	71
5.5	An Example: The KEPLER Problem, Revisited	73
	Summary	78
	Problems.	79
	References	79
6	The Double Pendulum	81
6.1	HAMILTON's Equations	81
6.2	Numerical Solution.	85
6.3	Numerical Analysis of Chaos.	88
	Summary	95
	Problems.	95
	References	96
7	Molecular Dynamics	97
7.1	Introduction	97
7.2	Classical Molecular Dynamics	97
7.3	Numerical Implementation.	102
	Summary	107
	Problems.	108
	References	109
8	Numerics of Ordinary Differential Equations:	
	Boundary Value Problems	111
8.1	Introduction	111
8.2	Finite Difference Approach	113
8.3	Shooting Methods.	118
	Summary	121
	References	122
9	The One-Dimensional Stationary Heat Equation	123
9.1	Introduction	123
9.2	Finite Differences	124

9.3	A Second Scenario	126
	Summary	128
	Problems.	129
	Reference	129
10	The One-Dimensional Stationary SCHRÖDINGER Equation	131
10.1	Introduction	131
10.2	A Simple Example: The Particle in a Box	134
10.3	Numerical Solution.	139
10.4	Another Case	142
	Summary	145
	Problems.	146
	References	146
11	Partial Differential Equations	147
11.1	Introduction	147
11.2	The POISSON Equation	148
11.3	The Time-Dependent Heat Equation	151
11.4	The Wave Equation	157
11.5	The Time-Dependent SCHRÖDINGER Equation	160
	Summary	167
	Problems.	167
	References	168
 Part II Stochastic Methods		
12	Pseudo Random Number Generators	171
12.1	Introduction	171
12.2	Different Approaches	174
12.3	Quality Tests	178
	Summary	182
	Problems.	182
	References	183
13	Random Sampling Methods	185
13.1	Introduction	185
13.2	Inverse Transformation Method	187
13.3	Rejection Method	190
13.4	Probability Mixing	193
	Summary	195
	Problems.	195

14	A Brief Introduction to Monte-Carlo Methods	197
	14.1 Introduction	197
	14.2 Monte-Carlo Integration	198
	14.3 The METROPOLIS Algorithm: An Introduction	205
	Summary	208
	References	208
15	The ISING Model	209
	15.1 The Model	209
	15.2 Numerics	218
	15.3 Selected Results	223
	Summary	227
	Problems	228
	References	228
16	Some Basics of Stochastic Processes	229
	16.1 Introduction	229
	16.2 Stochastic Processes	230
	16.3 MARKOV Processes	233
	16.4 MARKOV-Chains	241
	16.5 Continuous-Time MARKOV-Chains	247
	Summary	249
	Problems	250
	References	250
17	The Random Walk and Diffusion Theory	251
	17.1 Introduction	251
	17.2 The Random Walk	253
	17.3 The WIENER Process and Brownian Motion	259
	17.4 Generalized Diffusion Models	265
	Summary	272
	Problems	272
	References	273
18	MARKOV-Chain Monte Carlo and the POTTS Model	275
	18.1 Introduction	275
	18.2 MARKOV-Chain Monte Carlo Methods	276
	18.3 The POTTS Model	279
	18.4 Advanced Algorithms for the POTTS Model	284
	Summary	285
	Problems	286
	References	286

19 Data Analysis	287
19.1 Introduction	287
19.2 Calculation of Errors.	287
19.3 Auto-Correlations	291
19.4 The Histogram Technique	295
Summary	296
Problems.	297
Reference	297
20 Stochastic Optimization	299
20.1 Introduction	299
20.2 Hill Climbing.	301
20.3 Simulated Annealing.	303
20.4 Genetic Algorithms.	310
20.5 Some Further Methods	312
Summary	313
Problems.	314
References	314
Appendix A: The Two-Body Problem	315
Appendix B: Solving Non-Linear Equations: The NEWTON Method	321
Appendix C: Numerical Solution of Linear Systems of Equations	323
Appendix D: Basics of Probability Theory	331
Appendix E: Phase Transitions	345
Appendix F: Fractional Integrals and Derivatives in 1D	349
Appendix G: Least Squares Fit	351
Appendix H: Deterministic Optimization	357
