

CONTENTS

Introduction	1
PART I—Preliminary Stages	5
1. X-Rays	7
1.1. Origin	7
1.2. Absorption and Filtering	9
1.3. Selection of Radiation	11
1.4. X-Ray Tubes: Construction and Geometry	12
1.5. Synchrotron Radiation	14
1.6. Safety	15
2. Diffraction of X-Rays	18
2.1. Lattices, Planes, and Indices	18
2.2. X-Ray Diffraction	23
2.3. The Reciprocal Lattice	26
2.4. Bragg's Law in Reciprocal Space	33
3. Crystals, Symmetry, and Space Groups	41
3.1. Crystal Systems and Symmetry	41
3.2. Nonprimitive Lattices	50
3.3. Point Groups	53
	ix

3.4. Space Groups	56
3.5. Matrix Representation of Symmetry	67
3.6. Intensity-Weighted Reciprocal Lattice	71
4. Crystals and Their Properties	74
4.1. Crystallization	74
4.2. Growing Crystals	75
4.3. Choosing a Crystal	78
4.4. Crystal Mounting	83
4.5. Optical Alignment	87
4.6. Measurement of Crystal Properties	89
5. Geometric Data Collection	93
5.1. Rotation and Oscillation Theory	94
5.2. Rotation and Oscillation Practice	96
5.3. Rotation and Oscillation Uses	101
Alignment	101
Measurement of Axial Length	104
5.4. Zero-Level Weissenberg Theory	107
5.5. Upper-Level Weissenberg Theory	113
5.6. Weissenberg Practice	117
5.7. Weissenberg Uses	118
Alignment	118
Cell Constants	120
5.8. Precession Theory	121
5.9. Precession Practice	125
Geometry	125
Alignment	127
5.10. Diffractometer Theory	132
5.11. Diffractometer Practice	137
5.12. Symmetry Determination	140
6. Intensity Data Collection	154
6.1. Fundamentals	155
Unique Data	159
Use of Equivalent Reflections	162
Selection of Data	163
Accuracy	165
6.2. Film Methods for Intensity Measurement	165

6.3. Counter Methods for Intensity Measurement	167
Single Detector	167
Area Detector	173
6.4. Integrated Intensities	175
7. Data Reduction	178
7.1. Theory of Lorenz and Polarization Corrections	178
7.2. Data Reduction in Practice	182
Absorption	182
Deterioration	183
Scaling	184
7.3. Interpretation of Intensity Data	186
Uncertainties and Unobserved Reflections	186
Absolute Scaling and Temperature Factors	188
Symmetry	191
8. Theory of Structure Factors and Fourier Syntheses	196
8.1. Simple Harmonic Motion	196
8.2. Waves, Vectors, and Complex Numbers	197
8.3. Superposition of Waves	199
8.4. The Structure Factor	201
8.5. Friedel's Law	203
8.6. The Structure Factor in Exponential Form	203
8.7. The Structure Factor in Vector Form	204
8.8. The Generalized Structure Factor	205
8.9. Fourier Syntheses	206
8.10. Structure Factor and Fourier Example	210
8.11. Special Structure Factor Expressions	214
8.12. Fast Fourier Transform	217
8.13. Anomalous Scattering and Its Effects	218
9. Calculation of Structure Factors and Fourier Syntheses	223
9.1. Structure Factors	223
9.2. Fourier Synthesis	231
9.3. Other Coefficients	239
PART II—The Phase Problem	243
10. The Phase Problem	245

11. Direct Methods	248
11.1. Inequalities	249
11.2. <i>F</i> 's, <i>U</i> 's, and <i>E</i> 's	250
11.3. Structure Invariants and Seminvariants	255
11.4. Probability Methods	256
Centrosymmetric Methods	257
Noncentrosymmetric Methods	260
11.5. Modern Extensions	262
Determinantal Forms	262
Quartets and Higher Products	264
11.6. Phase Determination in Practice	265
Symbolic Addition	265
Multiple Solution Methods	274
Random Phase Methods	275
Getting a Model	276
12. Patterson Methods	279
12.1. The Patterson Function	279
12.2. Patterson Symmetry	283
12.3. Atom Finding in Practice	285
13. Heavy Atom Methods	292
13.1. Heavy Atom Phases	292
13.2. Other Heavy Atom Methods	296
13.3. Anomalous Scattering Methods	300
14. Search Methods	309
14.1. Trial-and-Error Methods	311
14.2. The Rotation Search	312
14.3. The Translation Search	315
Computerized Trial and Error	315
Limited Data	317
The <i>R</i> Criterion	317
Superposition Methods	318
14.4. The No-Model Problem	324
15. Completing the Structure	328
15.1. F_o Synthesis	328

Selection of Data	329
Interpretation of Results	330
15.2. ΔF Synthesis	331
Introduction and Selection of Data	331
Interpretation of Results	335
15.3. Other Fourier Syntheses	337
15.4. Structure Completion in Practice	337
PART III—Refinement and Results	341
16. Refinement of Crystal Structures	343
16.1. Introduction to Weighting	343
16.2. Refinement by Fourier Syntheses	344
F_o Syntheses	344
Differential Syntheses	345
Series Termination Error	348
Refinement by ΔF Syntheses	349
Differential ΔF Syntheses	354
Rejection Test	355
Double Shifts	355
16.3. Locating Hydrogen Atoms	355
16.4. Identification of Atom Types	356
16.5. Refinement by Least Squares	358
The Method of Least Squares	358
Refinement against $ F_o ^2$	362
Weighting Functions	363
16.6. Goodness-of-Fit Parameter	363
16.7. Least Squares and Matrices	364
Matrix Equations	364
Correlation Coefficients and the Correlation Matrix	365
Modified Matrix Least Squares	366
16.8. Modified Least Squares Refinements	368
Rigid-Body Least Squares Refinement	368
Least Squares with Subsidiary Conditions	370
Least Squares with Energy Minimization	370
Refinement by Simulated Annealing	371
16.9. Relationship between Fourier and Least Squares Methods	371
16.10. Practical Considerations in Least Squares Refinement	372

17. Random and Systematic Errors	379
17.1. Random Errors	379
17.2. Normal and Half-Normal Probability Plots	382
17.3. Estimated Standard Deviations from Fourier Refinement	384
17.4. Estimated Standard Deviations from Least Squares	386
17.5. Standard Deviations and the Model	387
17.6. Systematic Errors	389
Absorption	389
Extinction	390
Diffuse Scattering	394
Errors in Scattering Factors	395
Rotary Oscillation	397
18. Derived Results	400
18.1. Bond Lengths	400
18.2. Standard Deviations in Bond Lengths	401
18.3. Bond Angles	403
18.4. Standard Deviations in Bond Angles	403
18.5. Comparison of Bond Lengths and Angles	404
18.6. Averaging Bond Lengths and Angles	406
18.7. Least Squares Planes	409
18.8. Absolute Configuration	410
18.9. Thermal Motion	412
19. Ambiguities and Uncertainties	415
19.1. Experimental Data	415
19.2. Crystal Symmetry	417
19.3. Standard Deviations	418
19.4. Final Thoughts	419
Appendixes	421
A. Bragg's Law	421
B. The General Temperature Factor Expression	424
C. Matrix Operations	427
D. Structure Factor Graphs and Fourier Transforms	430

E. Weighting Functions	435
Photographic Observations	436
Counter Data	437
Index	441
