

# CONTENTS

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
<b>1. Design of Transcription Regulating Riboswitches</b>	<b>1</b>
Sven Findeiß, Manja Wachsmuth, Mario Mörl, and Peter F. Stadler	
1. Introduction	2
2. Computational Design of RNA Structures	5
3. Experimental Evaluation of Designed RNA Structures	15
4. Concluding Remarks	18
References	19
<b>2. Ligand-Dependent Exponential Amplification of Self-Replicating RNA Enzymes</b>	<b>23</b>
Charles Olea Jr. and Gerald F. Joyce	
1. Introduction	24
2. Exponential Amplification of RNA Enzymes	25
3. Ligand-Dependent Exponential Amplification	28
4. Nuclease-Resistant Autocatalytic Aptazymes	35
5. Real-Time Fluorescence Assays	36
6. Conclusions	38
Acknowledgments	38
References	38
<b>3. Design of Modular “Plug-and-Play” Expression Platforms Derived from Natural Riboswitches for Engineering Novel Genetically Encodable RNA Regulatory Devices</b>	<b>41</b>
Jeremiah J. Trausch and Robert T. Batey	
1. Introduction	42
2. Design of Riboswitch Modules	46
3. Analysis of Riboswitch Activity Using an <i>In Vitro</i> Single-Turnover Transcription Assay	56
4. Cell-Based GFP Reporter Assay	62
5. Concluding Remarks	67
Acknowledgment	68
References	68

---

<b>4. Integrating and Amplifying Signal from Riboswitch Biosensors</b>	<b>73</b>
Michael S. Goodson, Svetlana V. Harbaugh, Yaroslav G. Chushak, and Nancy Kelley-Loughnane	
1. Introduction	74
2. Riboswitch Signal Integration	76
3. Riboswitch Signal Amplification Using Biological Circuitry	82
Acknowledgments	89
References	89
<b>5. Simple Identification of Two Causes of Noise in an Aptazyme System by Monitoring Cell-Free Transcription</b>	<b>93</b>
Norikazu Ichihashi, Shungo Kobori, and Tetsuya Yomo	
1. Theory	94
2. Equipment	96
3. Materials	96
4. Solutions and Buffers	97
5. Protocol	98
6. Step 1: Cell-Free Transcription–Translation and Fluorescence Monitoring	99
7. Step 2: Data Analysis	101
8. Step 3: (Optional) Quantification of the Intermediate RNAs	104
References	107
<b>6. Engineering of Ribosomal Shunt-Modulating Eukaryotic ON Riboswitches by Using a Cell-Free Translation System</b>	<b>109</b>
Atsushi Ogawa	
1. Introduction	110
2. A Eukaryotic Translation Mechanism Requiring a Rigid mRNA Structure for Ribosomal Progression	112
3. Choice of a Translation System for Engineering Artificial Riboswitches	114
4. <i>In Vitro</i> -Selected Aptamer for Ribosomal Shunt-Modulating Riboswitches	115
5. How to Implant the Selected Aptamer into mRNA	116
6. General Design of mRNAs with Ribosomal Shunt-Modulating Riboswitches	119
7. Experiments	121
8. Conclusion	125
Acknowledgments	126
References	126

---

<b>7. Live-Cell Imaging of Mammalian RNAs with Spinach2</b>	<b>129</b>
Rita L. Strack and Samie R. Jaffrey	
1. Introduction	129
2. Developing Spinach, an RNA Mimic of GFP	132
3. Imaging with Spinach2, a Superfolding Variant of Spinach	134
4. Fluorescence Imaging of Spinach2-Tagged RNAs	140
5. Imaging Other RNAs Using Spinach2	144
Acknowledgments	144
References	144
<b>8. In Vitro Analysis of Riboswitch–Spinach Aptamer Fusions as Metabolite-Sensing Fluorescent Biosensors</b>	<b>147</b>
Colleen A. Kellenberger and Ming C. Hammond	
1. Introduction	148
2. Design and Preparation of an RNA-Based Fluorescent Biosensor	151
3. Determination of Ligand Selectivity and Affinity of Biosensor by Fluorescence Activation	160
4. Determination of Binding Kinetics of Biosensor	165
References	171
<b>9. Using Spinach Aptamer to Correlate mRNA and Protein Levels in <i>Escherichia coli</i></b>	<b>173</b>
Georgios Pothoulakis and Tom Ellis	
1. Introduction	174
2. Parts Selection and Plasmid Construction	175
3. <i>E. coli</i> Strain Selection	176
4. Culturing and Inducing <i>E. coli</i> Cells	178
5. Correlating mRNA and Protein Production Using Flow Cytometry	178
6. Correlating mRNA and Protein Production Using Fluorescence Microscopy	180
7. Summary	184
Acknowledgments	185
References	185
<b>10. Monitoring mRNA and Protein Levels in Bulk and in Model Vesicle-Based Artificial Cells</b>	<b>187</b>
Pauline van Nies, Alicia Soler Canton, Zohreh Nourian, and Christophe Danelon	
1. Introduction	188
2. The “Spinach Technology” for Combined Detection of mRNA and Protein in Cell-Free Expression Systems	190

3. Quantifying the Levels of mRNA and Protein Synthesized in PURE System	
Bulk Reactions	198
4. Detecting Gene Expression Inside Semipermeable Liposomes	207
5. Conclusion and Outlook	211
Acknowledgments	212
References	212
<b>11. Design, Synthesis, and Application of Spinach Molecular Beacons Triggered by Strand Displacement</b>	<b>215</b>
Sanchita Bhadra and Andrew D. Ellington	
1. Introduction	216
2. How to Engineer Spinach Molecular Beacons Triggered by Toehold-Mediated Strand Displacement	218
3. How to Synthesize Spinach.ST Molecular Beacons Enzymatically	233
4. How to Perform Functional Assays of Spinach.ST Molecular Beacons	234
5. Application: Real-Time Spinach.ST-Based Detection of NASBA	237
6. Conclusions	244
Acknowledgments	245
References	245
<b>12. Using Riboswitches to Regulate Gene Expression and Define Gene Function in Mycobacteria</b>	<b>251</b>
Erik R. Van Vlack and Jessica C. Seeliger	
1. Introduction	252
2. Riboswitch Reporter Assays	253
3. Construction of Recombinant Strains with Riboswitch-Regulated Genes	262
4. Induction of Mycobacterial Genes in Infected Host Cells	263
Acknowledgments	264
References	264
<b>13. Controlling Expression of Genes in the Unicellular Alga <i>Chlamydomonas reinhardtii</i> with a Vitamin-Repressible Riboswitch</b>	<b>267</b>
Silvia Ramundo and Jean-David Rochaix	
1. Introduction	268
2. Design of the Repressible Riboswitch System Acting on Chloroplast Genes	269
3. Methods	274
4. Conclusions and Perspectives	278
Acknowledgments	279
References	279

---

<b>14. Conditional Control of Gene Expression by Synthetic Riboswitches in <i>Streptomyces coelicolor</i></b>	<b>283</b>
Martin M. Rudolph, Michael-Paul Vockenhuber, and Beatrix Suess	
1. Introduction	284
2. Construction of Riboswitch-Controlled Expression Systems	286
3. Measurement of Riboswitch Activity	289
4. Characterization of Riboswitch-Controlled Gene Expression	290
5. Conclusion	296
Acknowledgments	297
References	298
<b>15. Engineering of Ribozyme-Based Aminoglycoside Switches of Gene Expression by <i>In Vivo</i> Genetic Selection in <i>Saccharomyces cerevisiae</i></b>	<b>301</b>
Benedikt Klauser, Charlotte Rehm, Daniel Summerer, and Jörg S. Hartig	
1. Theory	302
2. Equipment and Material	306
3. Protocol	310
References	318
<b>16. Kinetic Folding Design of Aptazyme-Regulated Expression Devices as Riboswitches for Metabolic Engineering</b>	<b>321</b>
David Sparkman-Yager, Rodrigo A. Correa-Rojas, and James M. Carothers	
1. Introduction	322
2. <i>In Vitro</i> Characterization	324
3. <i>In Silico</i> Transcript Design	331
4. <i>In Vivo</i> Validation	336
5. Future Directions	338
Acknowledgment	339
References	339
<b>17. Riboselector: Riboswitch-Based Synthetic Selection Device to Expedite Evolution of Metabolite-Producing Microorganisms</b>	<b>341</b>
Sungho Jang, Jina Yang, Sang Woo Seo, and Gyoo Yeol Jung	
1. Introduction	342
2. Materials	344
3. Construction and Validation of Riboselector: Riboswitch-Based Synthetic Selection Devices	344

---

4. Application of Riboselector for Pathway Engineering	355
5. Concluding Remarks	360
Acknowledgments	360
References	361
<b>18. Fluorescence Assays for Monitoring RNA–Ligand Interactions and Riboswitch-Targeted Drug Discovery Screening</b>	<b>363</b>
J. Liu, C. Zeng, S. Zhou, J.A. Means, and J.V. Hines	
1. Introduction	364
2. General Considerations	369
3. Example Protocols	373
4. Conclusions	381
Acknowledgments	381
References	381
<b>19. Monitoring Ribosomal Frameshifting as a Platform to Screen Anti-Riboswitch Drug Candidates</b>	<b>385</b>
Chien-Hung Yu and René C.L. Olsthoorn	
1. Introduction	386
2. Materials	387
3. Methods	390
4. Notes	392
References	393
