<b>Preface</b>	<b>vii</b>
<b>1 Historical background</b>	<b>1</b>
1.1 Early hypotheses	1
1.2 Studies of hydrocarbon combustion, 1930s to mid-1950s	10
1.3 Summary and conclusions	22
1.4 References	29
<b>2 Analytical–phenomenological studies of overall hydrocarbon combustion</b>	<b>32</b>
2.1 Introduction	32
2.2 Alkanes	33
2.3 Alkenes	60
2.4 Cycloalkanes and aromatic compounds	63
2.5 References	68
<b>3 Study of elementary reactions involved in hydrocarbon combustion</b>	<b>74</b>
3.1 Conventional indirect methods	75
3.2 Specialized indirect techniques	96
3.3 Direct methods involving production and monitoring of specific atoms or radicals	108
3.4 References	120
<b>4 Some elementary species (other than those containing carbon) involved in combustion</b>	<b>129</b>
4.1 Introduction	129
4.2 Hydroxyl (OH) radicals	130
4.3 Hydroperoxy (HO <sub>2</sub> ) radicals	157
4.4 Oxygen (O) atoms	176
4.5 Hydrogen (H) atoms	210
4.6 References	237
<b>5 Elementary carbon-containing species in combustion</b>	<b>261</b>
5.1 Alkyl radicals	261
5.2 Alkylperoxy radicals	286
5.3 Alkoxy radicals	295
5.4 Acyl and acylperoxy radicals	304
5.5 Other hydrocarbon radicals	307
5.6 References	315

<b>6</b>	<b>Pyrolytic reactions of hydrocarbons</b>	<b>327</b>
6.1	Introduction	327
6.2	Pyrolysis of alkanes	328
6.3	Pyrolysis of alkenes and dialkenes	335
6.4	Pyrolysis of alkynes	342
6.5	Pyrolysis of cycloalkanes and aromatic compounds	346
6.6	Coke and carbon formation	349
6.7	References	370
<b>7</b>	<b>Prediction of the behaviour of combustion systems: modelling</b>	<b>378</b>
7.1	Introduction	378
7.2	Stoichiometric/semikinetiic models	379
7.3	Models based on detailed mechanisms	380
7.4	References	392
	<b>Index</b>	<b>395</b>
