

# Contents

<b>1. Quantum Mechanics and Atomic Theory</b> . . . . .	1
A. Elements of Quantum Mechanics . . . . .	3
a) The Hydrogen Atom . . . . .	4
b) Spin and Perturbation Theory . . . . .	13
c) Summary . . . . .	15
B. The Use of Symmetry . . . . .	16
a) Representations . . . . .	16
b) Irreducible Representations . . . . .	18
c) Direct Products . . . . .	19
d) Application to Quantum Chemistry . . . . .	20
e) Transition Probabilities . . . . .	20
f) Degeneracy . . . . .	22
g) Summary . . . . .	23
C. Polyelectronic Atoms . . . . .	23
a) A Perturbation Treatment of Electron Repulsion . . . . .	26
b) Atomic Spectra . . . . .	28
c) *Correlation Effects . . . . .	29
d) Ionisation Energies and Electron Affinities . . . . .	31
e) *Theoretical Calculations of Atomic Structure . . . . .	35
f) Summary . . . . .	36
Bibliography . . . . .	37
Problems . . . . .	37
<b>2. Simple Molecular Orbital Theory</b> . . . . .	39
A. Molecular Orbitals . . . . .	39
B. Heteronuclear Diatomic Molecules . . . . .	45
C. Further Applications of M.O. Theory . . . . .	49
D. Multiple Bonds . . . . .	56
E. *Electron Repulsion . . . . .	60
F. *Methods of Calculation . . . . .	62

---

Sections marked with an asterisk may be omitted at the first reading.

Bibliography . . . . .	64
Problems . . . . .	64
<b>3. Structural Applications of Molecular Orbital Theory . . . . .</b>	<b>66</b>
A. Simple Polyatomic Species . . . . .	66
B. Transition Metal Compounds. . . . .	73
C. Organometallic Compounds. . . . .	84
D. Electron Deficiency . . . . .	93
E. The Electronic Structure of Solids . . . . .	102
F. Metal-Metal Bonds. . . . .	120
G. Intermolecular Attractions . . . . .	123
Bibliography. . . . .	128
Problems . . . . .	129
<b>4. Electronic Spectra and Magnetic Properties of Inorganic Compounds . . . . .</b>	<b>132</b>
A. Electronic Spectra . . . . .	132
a) d-d Transitions . . . . .	132
b) Charge Transfer Spectra . . . . .	140
c) Electronic Spectra of Lanthanides and Actinides . . . . .	142
d) Electronic Spectra of Compounds of Main Group Elements . . . . .	144
e) Optical Activity . . . . .	144
f) Polarisation of Absorption Spectra . . . . .	146
g) Mixed Valence Spectra . . . . .	147
B. Magnetic Properties . . . . .	148
a) Orbital Angular Momentum. . . . .	149
b) Spin Angular Momentum . . . . .	150
c) Spin Orbit Coupling. . . . .	151
d) Calculation of Paramagnetic Properties . . . . .	152
e) Magnetic Exchange . . . . .	154
f) Spin Crossover Complexes. . . . .	155
Bibliography. . . . .	156
Problems . . . . .	157
<b>5. Alternative Methods and Concepts . . . . .</b>	<b>159</b>
A. Alternative Models of Chemical Bonding . . . . .	159
a) *X- $\alpha$ Methods . . . . .	159
b) Valence Bond Theory. . . . .	161
c) The Ionic Model . . . . .	165
d) Valence Shell Electron Pair Repulsion . . . . .	171
B. The Use of Thermodynamics in Inorganic Chemistry . . . . .	176

C. Useful Concepts in Inorganic Chemistry . . . . .	184
a) Electronegativity . . . . .	184
b) Acids and Bases . . . . .	189
c) Hardness and Softness . . . . .	190
d) Oxidation Numbers and Oxidation States . . . . .	195
e) Conclusions . . . . .	197
Bibliography . . . . .	198
Problems . . . . .	199
<b>6. Mechanism and Reactivity . . . . .</b>	<b>202</b>
A. A General Approach to Reactivity . . . . .	202
B. Analysis of Reaction Mechanisms . . . . .	212
C. Selected Reactions and Topics . . . . .	223
a) Reactions Showing the Importance of Orbital Symmetry . . . . .	223
b) Solvent Effects . . . . .	228
c) Catalysis . . . . .	230
d) Steric Effects and Stereochemistry . . . . .	234
e) Solid State Reactions . . . . .	237
f) Photochemistry . . . . .	240
Bibliography . . . . .	247
Problems . . . . .	248
<b>7. Descriptive Chemistry . . . . .</b>	<b>250</b>
A. Orbital Energy . . . . .	250
B. Overlap . . . . .	253
C. Main Group Elements . . . . .	255
D. The Transition Elements . . . . .	266
E. The Lanthanides . . . . .	274
F. The Actinides . . . . .	275
G. Conclusions . . . . .	277
Bibliography . . . . .	278
Problems . . . . .	279
<b>8. Physical and Spectroscopic Methods . . . . .</b>	<b>282</b>
A. Diffraction Methods . . . . .	282
B. Electron Spectroscopy . . . . .	284
C. X-Ray Spectroscopy . . . . .	286
D. Vibrational Spectroscopy . . . . .	286
E. Microwave Spectroscopy . . . . .	288
F. Nuclear Magnetic Resonance Spectroscopy . . . . .	288
G. N.Q.R. Spectroscopy . . . . .	290
H. Mössbauer Spectroscopy . . . . .	292

I. Electron Spin Resonance (E.S.R.) Spectroscopy . . . . .	293
J. Mass Spectroscopy. . . . .	296
K. Conclusions . . . . .	296
Bibliography. . . . .	299
Problems . . . . .	300
<b>Appendix I: Tables for Group Theory . . . . .</b>	<b>301</b>
<b>Appendix II: Abbreviations, Symbols, and Energy Units. . . . .</b>	<b>308</b>
<b>Subject Index . . . . .</b>	<b>311</b>
