

TABLE OF CONTENTS

Editorial Preface	vii
Constructive and Axiomatic Method. An Essay by P. Lorenzen	ix
Preface to the Second Edition	xxi
Preface to the Third Edition	xxv

CHAPTER I / ON THE PROBLEM OF CHRONOMETRY IN THE PRESENT-DAY THEORY OF SCIENCE

1. Introduction: Establishment of a Reference to Known Positions in the Theory of Science	1
2. Affirmative Theory of Science and the Language of Physics	
2.a. M. Bunge's Affirmative Protophysics	13
3. The Affirmative Theory of Measurement	14
4. Affirmative Explanations of the Choice of the Time Standard	23

CHAPTER II / ON THE METHOD OF PHYSICS

1. Preliminary Remarks	30
2. Method as a Validity Criterion. On the Foundational Theory of Hugo Dingler	30
2.1. H. Dingler and Protophysics	30
2.2. H. Dingler's Foundational Theory	35
3. Logic and Protophysics. On the Foundational Theory of Paul Lorenzen	51
4. On the Method of Physics	62
4.1. Physics, Natural or Experimental Science?	62
4.2. The Claim to Scientific Nature (<i>Wissenschaftlichkeit</i>)	66
4.3. Methodology of Measurement	69
5. On the Criticism of Protophysics	82

CHAPTER III / CHRONOMETRY

1. What Purpose Shall Time-Measurement Serve?	87
---	----

2.	Moved Bodies	101
3.	Comparisons of Motion	108
	3.1. Theorems on Similarity	113
	3.2. Continuity of Changes of Velocity	124
4.	Forms of Motion	135
	4.1. Introduction: Objections to Periodicity as a Protophysical Basic Concept	135
	4.2. Uniform Motion	142
	4.3. The Uniqueness of Clock Definition	153
	4.4. Outlook and Consequences	160
CHAPTER IV / ON A HISTORY OF CHRONOMETRY		
1.	Preliminary Remarks: Terminological Distinction of Practical and Theoretical Chronometry	165
2.	The Development of Chronology	166
3.	Short History of the Water Clock	168
4.	Short History of Mechanical Escapement Clocks	170
5.	The Principles of Clock Construction	184
6.	Time Theories	187
	6.1. Aristotle's Theory of Time	187
	6.2. Augustine's Theory of Time	199
	6.3. Transition to Classical Physics	210
	Notes	214
	References	225
	Name Index	231
	Subject Index	234
