

Contents

IX. Recursive constructions	608
§1. Product constructions	608
§2. Use of pairwise balanced designs	617
§3. Applications of divisible designs	621
§4. Applications of Hanani's lemmas	627
§5. Block designs of block size three and four	636
§6. Solution of Kirkman's schoolgirl problem	641
§7. The basis of a closed set	644
§8. Block designs with block size five	651
§9. Divisible designs with small block sizes	660
§10. Steiner quadruple systems	664
§11. Embedding theorems for designs and partial designs	673
§12. Concluding remarks	681
X. Transversal designs and nets	690
§1. A recursive construction	690
§2. Transversal designs with $\lambda > 1$	693
§3. A construction of Wilson	696
§4. Six and more mutually orthogonal Latin squares	703
§5. The theorem of Chowla, Erdős and Straus	706
§6. Further bounds for transversal designs and orthogonal arrays	708
§7. Completion theorems for Bruck nets	713
§8. Maximal nets with large deficiency	725
§9. Translation nets and maximal nets with small deficiency	731

§10. Completion results for $\mu > 1$	749
§11. Extending symmetric nets	758
§12. Complete mappings, difference matrices and maximal nets . . .	761
§13. Tarry's theorem	772
§14. Codes of Bruck nets	778
XI. Asymptotic existence theory	781
§1. Preliminaries	781
§2. The existence of Steiner systems with v in given residue classes	783
§3. The main theorem for Steiner systems $S(2, k; v)$	787
§4. The eventual periodicity of closed sets	790
§5. The main theorem for $\lambda = 1$	793
§6. The main theorem for $\lambda > 1$	796
§7. An existence theorem for resolvable block designs	801
§8. Some results for $t \geq 3$	805
XII. Characterisations of classical designs	806
§1. Projective and affine spaces as linear spaces	806
§2. Characterisations of projective spaces	808
§3. Characterisation of affine spaces	821
§4. Locally projective linear spaces	828
§5. Good blocks	833
§6. Concluding remarks	841
XIII. Applications of designs	852
§1. Introduction	852
§2. Design of experiments	856
§3. Experiments with Latin squares and orthogonal arrays	874
§4. Application of designs in optics	880
§5. Codes and designs	892
§6. Discrete tomography	926
§7. Designs in data structures and computer algorithms	930
§8. Designs in hardware	937
§9. Difference sets rule matter and waves	946
§10. No waves, no rules, but security	956
Appendix. Tables	971
§1. Block designs	971
§2. Symmetric designs	981

§3. Abelian difference sets	990
§4. Small Steiner systems	997
§5. Infinite series of Steiner systems	999
§6. Remark on t -designs with $t \geq 3$	1001
§7. Orthogonal Latin squares	1002
Notation and symbols	1005
Bibliography	1013
Index	1093
