

# Contents

<b>1. Introduction</b>	<b>1</b>
1.1 Chemical Conversions	3
<i>Combustion and Partial Combustion, Hydrogenation, Indirect Hydrogenation, the Coal-Steam Reaction, Direct Conversion, Catalysis</i>	
1.2 Reacting Systems	9
<i>Fixed Versus Suspended Beds</i>	
1.3 State of the Technology	11
1.4 Trends in Research and Development	15
<i>Energy Conversion</i>	
Supplement:	
Miscellaneous Coal Liquefaction and Gasification Processes	24
<b>2. Physical and Chemical Changes in Coals</b>	<b>47</b>
2.2 The Characteristics of Coal	48
<i>Analysis, Rank, Petrography, Physical and Thermodynamic Properties</i>	
2.2 Moisture in Coals	58
<i>Analysis, Drying</i>	
2.3 The Action of Solvents	60
2.4 Pyrolysis	64
<i>Carbonization, Effects During Firing, Effect of Moisture</i>	
2.5 Addition and Substitution Reactions	73
<i>Hydrolysis, Alkalies, Organic Solvents, Other Effects</i>	

<b>3. Reactions with Air or Oxygen (Combustion)</b>	<b>81</b>
3.1 Influence of Coal Quality	84
2.3 Low-Temperature Reactions <i>Atmospheric Oxidation, Moisture, Pyrites, Spontaneous Combustion</i>	85
3.3 The Energetics of Combustion <i>Heat Balance, Soot Formation, Convection and Radiation, Fouling, Excess Air</i>	90
3.4 Combustion Mechanisms <i>Stages of Reaction, Homogeneous Behavior and Ignition, Surface Effects, Combustion Rates, Coal/Air Transport, Additives and Catalysis; Experimental Systems</i>	102
3.5 Effects of Moisture on Combustion <i>Steam-Carbon Reaction, CO Oxidation, Furnace Performance</i>	119
3.6 Coal/Water Systems <i>Transport of Coal/Water Suspensions, Combustion of Coal/Water Slurries, Integrated Systems, Conclusions</i>	126
3.7 Combustion Systems <i>Fixed or Slowly-Moving Beds, Fluidized Combustion, Entrained Systems</i>	133
<b>4. Partial Combustion</b>	<b>153</b>
4.1 Reactions Producing Carbon Monoxide <i>Reaction Times, The Boudouard Reaction</i>	154
4.2 Producer Gas <i>Variables, Sulfur</i>	169
4.3 <i>In Situ</i> Gasification <i>Fracture, Problems of In Situ Gasification, Conversion</i>	173

<b>5. Reactions with Hydrogen</b>	183
5.1 Hydrogenation Without Carrier	185
5.2 Liquid-Phase Hydrogenation	189
5.3 Vapor-Phase Hydrogenation	194
5.4 Mild Hydrogenation	195
<i>Bitumens, Reaction Conditions, The Makeup and Properties of Synthetic Bitumens</i>	
5.5 Dehydration	200
<b>6. Reactions with Steam</b>	205
6.1 Water-Gas Reactions	205
6.2 Catalytic Effects	208
<i>Process Applications</i>	
6.3 Endothermicity	213
6.4 Steam-Gasification Systems	214
<b>7. Reactions of Carbon Monoxide and Hydrogen</b>	223
7.1 Products and Conditions	224
7.2 Catalyst Compositions and Properties	233
7.3 Catalyst Preparation and Activity	238
7.4 Effects of Operating Variables	245
<i>Temperature, Pressure, Reaction Time, Composition</i>	
7.5 Experimental Studies	251
<b>8. Catalysis and Heterogeneous Reactions</b>	265
8.1 Catalyst Activation and Regeneration	272
<i>Activation and Reaction, The Surface Reaction</i>	
8.2 The Premise of Direct Conversion	277

8.3	The Hoffman Process <i>Description of Reactions, Experimental Systems, Catalyst Behavior, Experimental Results, Other Factors</i>	280
9.	The Production of Hydrogen and Carbon Monoxide as Fuels and Reaction Intermediates	287
9.1	Hydrogen From Coal-Steam Systems	288
9.2	Carbon Monoxides Properties and Sources <i>Properties</i>	292
9.3	Generation of Carbon Monoxide <i>Gas Producers, Novel Gasification Schemes, Car- bon Monoxide from Basic Oxygen Furnaces (BOF), Hot-Gas Cleanup, Conversion of Carbon Dioxide to Carbon Monoxide, Other Methods for the Produc- tion of Carbon Monoxide</i>	294
9.4	Maximizing Carbon Monoxide Production	315
9.5	Separation and Recovery of Carbon Monoxide <i>Copper Aluminum Chloride, Low Concentrations of Carbon Monoxide, Low Temperature Separation of Carbon Monoxide</i>	317
10.	Ancillary Considerations	329
10.1	Water Requirements for Coal Conversion <i>Other Figures</i>	331
10.2	Removal of Sulfur Oxides and Particulates	338
10.3	Acid Gas Absorption Systems <i>Alkalies, Hot Potassium Carbonate Solutions, Solvents, Amines, Selective Absorption, Heats of Solution, Thermal Input, Adsorptive Methods, Novel Methods for CO<sub>2</sub> Removal and Recovery, NO<sub>x</sub> Absorption</i>	345
10.4	Conversion of Hydrogen Sulfide	358
10.5	Drying and Compression	359
10.6	Other Compounds	360

APPENDIX.	The Determination of Net Energy Efficiencies for Coal Conversion Processes <i>Net Energy Analysis</i>	365
I.	Comparison of Reaction Sequences For the Production of High-Btu Gas (Methane) <i>Direct Methanation, Indirect Methanation, Direct Hydrogenation</i>	371
II.	Stoichiometry Based on Coal Analysis <i>Analysis of the Conversion, Conversion to Benzene, Conversion to Oxygenated Compounds, Pyrolysis</i>	375
III.	Carbon Balances and Heats of Reaction <i>Direct Methanation, Indirect Methanation (O-BPG), Indirect Methanation (External Combustion), Direct Methanation</i>	383
	Supplement to Section III	391
IV.	Thermodynamic Efficiencies for Methane Production <i>Conversion, Efficiency, Feed Carbon, Total Actual Carbon Requirement, Oxygen, Latent Heat, Reaction Heat Requirements, Size Reduction, Acid Gas Removal and Recovery, Compression Requirements, Additional Plant Energy Requirements, Results</i>	395
V.	Production of Low- or Medium-Btu Gas <i>Assumptions, Reaction Stoichiometry, Energy Inputs for Oxygen or Air, Expansion, Additional Requirements, Results, Combustion of Hot Gas</i>	425
	SUBJECT INDEX	451
