LIST OF CONTRIBUTORS TO PART I .....	v
PREFACE .....	vii
CONDENSED TABLE OF CONTENTS OF PARTS I-III .....	xiii
Introduction, Parts I-III .....	1
<b>O. SINANOĞLU</b>	

## Section I. A. Saturated Compounds

<b>1. Present Status of the Theory of Electronic Structure of Molecules</b>	
<b>ROBERT G. PARR</b>	
1. The Problem .....	5
2. One- and Two-Electron Cases .....	6
3. Preliminaries for Many-Electron Cases .....	9
4. Many-Electron Cases .....	10
5. Implementation .....	13
6. Conclusion .....	14
<b>2. Chemical Predictions by MO Theory: The Rare Gas Halides</b>	
<b>JOSHUA JORTNER and STUART A. RICE</b>	
1. Introduction .....	15
2. The Electron-Correlation Model .....	16
3. The Molecular Orbital Model .....	18
4. The Valence Bond Model .....	25
5. Interpretation of Physical Properties .....	28
6. Excited Electron States .....	33
7. Discussion of the Theoretical Models .....	43
References .....	45
<b>3. Sigma Molecular Orbital Theory and Chemical Reactivity</b>	
<b>KENICHI FUKUI</b>	
1. Introduction .....	49
2. Sigma Molecular Orbital .....	49
3. Chemical Reactivity Theory .....	59
4. Electron Delocalization at the Transition State .....	63
5. Simple Interpretation of Reactivity of Saturated Compounds .....	70
6. Conclusion .....	81
References .....	83

## 4. Localized Self-Consistent Field Orbitals in Atoms and Molecules

KLAUS RUEDENBERG

1. Introduction .....	85
2. Arbitrariness of Hartree-Fock Orbitals .....	86
3. Fixation of Hartree-Fock Orbitals .....	88
4. Canonical SCF Orbitals .....	89
5. Externally Localized SCF Orbitals .....	89
6. Intrinsically Localized SCF Orbitals .....	90
7. Choice of Separation Function $f(r_{12})$ .....	92
8. Construction of Localized Orbitals from an Arbitrary Set of SCF Orbitals .....	93
9. Localized Orbitals and Molecular Symmetry .....	93
10. Localized Orbitals in the Absence of Symmetry .....	95
11. Localized Molecular Orbitals in Delocalized Electronic Systems .....	98
References .....	99

## 5. Integral Hellmann-Feynman Theorem, Barriers to Internal Rotations, and Isoelectronic Processes

ROBERT G. PARR

1. Integral Hellmann-Feynman Theorem .....	101
2. Barriers to Internal Rotation .....	102
3. Isoelectronic Processes .....	104
References .....	105

## Section I. B. Pi-Electron Systems

## 1. General Survey of Pi-Electron Methods and Problems

ROBERT G. PARR

1. Pi-Electron Approximation .....	107
2. Pi-Electron Methods .....	109
3. Pi-Electron Problems .....	110
References .....	112

## 2. Three-Dimensional and One-Dimensional Free-Electron Molecular Orbitals

RICHARD L. HUMMEL and KLAUS RUEDENBERG

1. Introduction .....	113
2. General Solution .....	114
3. Determination of Eigenvalues as Functions of $\Delta$ .....	116
4. One-Dimensional Model .....	118
5. Comparison of Energies .....	119
6. Comparison of Wavefunctions .....	120
7. Conclusion .....	121
Appendix .....	122
References .....	123

<b>3. Self-Consistent Field Theory of Nonclosed Shell Systems with Application to Pi-Electron Systems</b>	
<b>R. LEFEBVRE</b>	
1. Introduction .....	125
2. Self-Consistent Field Equations for a Closed Shell System. The Brillouin Theorem .....	126
3. Self-Consistent Conditions for a Doublet State with One Nonclosed Shell .....	128
4. Self-Consistent Conditions for a Triplet State with Two Nonclosed Shells .....	131
5. The Lowest Triplet Excitation Energies of Some Even Alternant Hydrocarbons Calculated to Various Degrees of Self-Consistency ....	132
Summary .....	134
References .....	134
<b>4. Charge Transfer and Radical Ions</b>	
<b>L. J. OOSTERHOFF</b>	
1. Introduction .....	137
2. Formulae .....	139
3. Loosely Bound and Semi-Ionic Complexes: Benzene-Iodine and Trimethylamine-Iodine .....	142
4. Ionic Compounds: Sodium Iodide .....	145
5. The Organic Chemist's View of the Problem .....	148
6. Radical Ions .....	151
7. Photoionization .....	152
References .....	154
<b>5. Some Properties of Pi-Ions and Triplets</b>	
<b>A. T. AMOS</b>	
1. Introduction .....	157
2. Restricted Hartree-Fock .....	157
3. Unrestricted Hartree-Fock .....	158
4. Energies and Charge Densities .....	159
5. The Transformation Properties of the Orbitals .....	161
6. Spin Properties of $\Psi_{U.H.F.}$ .....	164
7. Zero-Field Splitting in Triplet States .....	167
8. Conclusion .....	169
References .....	169
<b>6. Critical Examination of Pi-Electron Theories</b>	
<b>a. Applicability of the Hückel and Pariser-Parr-Type Methods</b>	
<b>J. KOUTECKÝ</b>	
Text .....	171
References .....	182

<b>b. Orbital Basis of Zero Differential Overlap</b>	
<b>INGA FISCHER-HJALMARS</b>	
1. Introduction .....	185
2. Expansion Method .....	187
3. Applications to the Fock Operator .....	189
4. Reformulation of the ZDO Assumption .....	192
References .....	193
<b>c. Electron Distribution in Heteromolecules</b>	
<b>R. DAUDEL</b>	
1. Importance of the Notion of Charge .....	195
2. Pariser, Parr, and Hückel (or Pauling and Wheland)	
Approximations .....	195
3. The Nature of the Pariser and Parr Approximations .....	196
4. Effect of the Introduction of OAO's on the $\pi$ -Electron	
Distribution .....	197
5. Comparison between Pariser, Parr, and Pople Method and	
Hückel Method .....	199
References .....	202
<b>d. Semiempirical Parameters in MO Theory</b>	
<b>INGA FISCHER-HJALMARS</b>	
1. Introduction .....	203
2. One-Center Integrals .....	203
3. Two-Center Integrals .....	210
References .....	213
<b>e. Extended CI Calculation on Benzene</b>	
<b>J. KOUTECKÝ</b>	
Text .....	215
References .....	220
<b>f. The Pi-Electron Approximation and Coulomb Repulsion Parameters</b>	
<b>O. SINANOGLU and M. K. ORLOFF</b>	
1. The Pi-Electron Approximation .....	221
2. Coulomb Repulsion Parameters .....	225
References .....	231
AUTHOR INDEX .....	233
SUBJECT INDEX .....	239
