

CONTENTS

Master Symbol List, xiii

Chapter 1. Introduction

- 1.1 Historical Perspective, 2
- 1.2 The Profusion of Separation Methods, 3
- 1.3 About the Book, 5

PART ONE FUNDAMENTALS

Chapter 2. Separation Equilibria

- 2.1 Thermodynamics of Separation, 12
- 2.2 The Molecular Basis of Equilibrium Separations, 33

Chapter 3. Diffusion and Mass Transport

- 3.1 Introduction, 63
- 3.2 Diffusion, 64
- 3.3 Diffusion Rates in Various Media, 73
- 3.4 Thermal Diffusion, 82
- 3.5 Mass Transfer through Interfaces, 83
- 3.6 Fluid Flow, 85

Chapter 4. Operational Aspects of Separation

- 4.1 Terminology and Classification, 97
- 4.2 Single-Contact (Cocurrent) Processes, 100

- 4.3 Differential Processes, 101
- 4.4 Crosscurrent Processes, 102
- 4.5 Countercurrent Processes, 103
- 4.6 Countercurrent Processes with Reflux, 104
- 4.7 Differential Migration Methods, 106
- 4.8 Craig Distribution and Chromatography, 110
- 4.9 Zone Melting, 118

Chapter 5. Chromatography

- 5.1 Introduction, 121
- 5.2 Retention and Equilibrium, 129
- 5.3 The Origin and Importance of Band Spreading, 135
- 5.4 Resolution, 146
- 5.5 Multicomponent Separations, 155

Chapter 6. Characteristics of Individual Separation Methods

- 6.1 Adaptability, 170
- 6.2 Load Capacity, 171
- 6.3 Fraction Capacity, 171
- 6.4 Selectivity, 174
- 6.5 Speed and Convenience of Separation, 178

PART TWO METHODS BASED ON PHASE AND
DISTRIBUTION EQUILIBRIA

Chapter 7. Distillation (R. H. McCormick)

- 7.1 Introduction, 181
- 7.2 Theory, 183
- 7.3 Experimental Techniques, 192
- 7.4 Other Types of Distillation, 199

Chapter 8. Gas-Liquid Chromatography

- 8.1 Theory, 212
- 8.2 Experimental Gas-Liquid Chromatography, 229
- 8.3 Typical Applications, 239

Chapter 9. Solvent Extraction (H. Freiser)

- 9.1 Introduction, 247
- 9.2 Process of Extraction, 248

- 9.3 Classification of Inorganic Extraction Systems, 250
- 9.4 Fundamental Extraction Parameters, 255
- 9.5 Methods of Extraction, 256
- 9.6 Quantitative Treatment of Extraction Equilibria, 257

Chapter 10. Liquid-Liquid Chromatography

- 10.1 Theory, 268
- 10.2 Column Chromatography, 285
- 10.3 Paper Chromatography, 290
- 10.4 Some Related Methods, 294
- 10.5 Applications, 296

Chapter 11. Crystallization (W. R. Wilcox)

- 11.1 Introduction, 303
- 11.2 Crystallization Phenomena, 306
- 11.3 Separation by Crystallization, 311
- 11.4 Phenomena Influencing Separation, 318
- 11.5 Related Processes, 333

**Chapter 12. Ion-Exchange Separation Processes
(H. L. Rothbart)**

- 12.1 Introduction, 337
- 12.2 Structure, 338
- 12.3 Properties of Ion Exchangers, 341
- 12.4 Applications, 351
- 12.5 Chromatography, 353

Chapter 13. Liquid-Solid Adsorption Chromatography

- 13.1 Theory, 378
- 13.2 Experimental Aspects, 395
- 13.3 Some Related Methods, 400
- 13.4 Affinity Chromatography, 402
- 13.5 Applications, 406

Chapter 14. Other Interfacial Processes

- 14.1 Gas-Solid Adsorption, 411
- 14.2 Adsorption Bubble Separation Processes, 423

Chapter 15. Exclusion Processes (J. Y. Chuang and J. F. Johnson)

- 15.1 Adsorption on Molecular Sieves (Zeolites), 437
- 15.2 Gel Chromatography, 444
- 15.3 Clathration, 461

PART THREE OTHER SEPARATION METHODS**Chapter 16. Barrier Separation Processes (R. A. Cross and H. Strathmann)**

- 16.1 Introduction, 469
- 16.2 Structure and Transport Properties of Semipermeable Membranes, 470
- 16.3 Fluxes and Driving Forces in Membrane Separation Processes, 471
- 16.4 Theory and Practice of Selected Membrane Separation Processes, 472

Chapter 17. Electrophoresis (M. Bier)

- 17.1 Introduction, 497
- 17.2 Theory, 501
- 17.3 Techniques, 505

Chapter 18. Miscellaneous Separation Processes

- 18.1 Ultracentrifugation, 527
- 18.2 Particle Classification by Size, 539
- 18.3 Electromagnetic Separation (Mass Spectrometry), 548
- 18.4 Thermal Diffusion, 551
- 18.5 The Use of Enzymes for Separation, 552

Chapter 19. Multistep Separation Schemes for Complex Samples

- 19.1 Designing a Multistep Scheme, 557
- 19.2 Some Examples of Separation Schemes, 565
- 19.3 Conclusion, 577
