

# CONTENTS

Preface	11
List of symbols	13
<b>Chapter 1. Complexes and their Properties</b>	17
1.1. Elements of the chemistry of complexes	17
1.2. Equilibria	22
1.2.1. Complex-formation equilibria	22
1.2.1.1. Equilibria of mononuclear complexes	25
1.2.1.2. Equilibria of polynuclear complexes	31
1.2.2. Equilibria of acid–base reactions: protonation of the ligand	34
1.2.3. Equilibria of redox reactions	39
1.2.4. Practical instructions for equilibrium calculations	43
1.2.5. Worked examples	46
1.3. Conditional equilibrium constants	51
1.3.1. Role of the hydrogen ion concentration in complex formation	59
1.3.2. Worked examples	63
1.4. Factors affecting complex formation	67
1.4.1. The nature of the central ion	69
1.4.2. The properties of the ligand	70
1.5. Kinetics of the reactions of complexes	74
1.6. Energy changes involved in complex formation reactions	77
1.6.1. Calculation of equilibrium constants from thermodynamic data	78
1.6.2. Temperature dependence of the equilibrium constant	79
1.6.3. Worked examples	81
1.7. Dependence of equilibrium constants on the solvent	86
<b>Chapter 2. Determination of Equilibrium Constants</b>	89
2.1. Determination of protonation constants	89
2.1.1. Potentiometric methods	89
2.1.1.1. Practical instructions	98
2.1.2. Spectrophotometric methods	101
2.1.2.1. Practical advice	104

2.1.3. Worked examples	105
2.2. Determination of the stability constants of mononuclear complexes	111
2.2.1. Potentiometric methods	112
2.2.1.1. Direct methods	112
2.2.1.2. Methods based on measurement of pH	116
2.2.1.3. Worked examples	127
2.2.2. Spectrophotometric methods	137
2.2.2.1. Method of continuous variation	137
2.2.2.2. The mole-ratio method	140
2.2.2.3. Bjerrum's method	141
2.2.2.4. Other methods	143
2.2.2.5. Worked examples	143
2.2.3. Polarographic methods	147
2.2.3.1. Practical aspects	151
2.2.3.2. Worked examples	153
2.2.4. Extraction methods	155
2.2.4.1. Worked example	164
2.2.5. Ion-exchange methods	165
2.2.5.1. Worked example	170
2.2.6. Determination of the stability constant of mixed-ligand complexes	174
2.2.6.1. Worked example	177
2.3. Determination of the stability constants of polynuclear complexes	181
 Chapter 3. Analytical Applications	182
3.1. Gravimetric analysis	182
3.1.1. Worked examples	187
3.2. Acid-base titrations	194
3.2.1. Calculation of the hydrogen ion concentration	194
3.2.2. Determination of acids and bases	199
3.2.3. Indirect determination of complex-forming ions by acid-base titration	207
3.2.4. Worked examples	208
3.3. Precipitation titrations	213
3.3.1. Electrodes of the second kind and membrane electrodes	216
3.3.2. Worked examples	218
3.4. Complexometric titrations	219
3.4.1. Theory of complexometric titrations using chelating agent as titrant	220
3.4.2. End-point detection	224
3.4.3. Analysis of mixtures of metals	227

Contents	9
3.4.4. Worked examples	229
3.5. Redox titrations	232
3.5.1. Worked examples	240
3.6. Polarography	247
3.6.1. Worked examples	249
3.7. Spectrophotometry	252
3.7.1. Worked examples	255
3.8. Liquid-liquid extraction	258
3.8.1. Extraction equilibrium for simple or ion-association complexes	259
3.8.2. Extraction equilibrium for chelates	260
3.8.3. Selectivity and degree of extraction	264
3.8.4. Worked examples	266
3.9. Ion-exchange separations	270
3.9.1. Cation-exchange equilibria	270
3.9.1.1. Chromatographic separation of metal ions on cation-exchange columns	273
3.9.1.2. Chromatographic separation of organic bases on cation-exchange columns	278
3.9.2. Anion-exchange equilibria	281
3.9.2.1. Separation of anions and organic acids on anion-exchange resin columns	283
3.9.2.2. Chromatographic separation of metal ions on anion-exchange resin columns	284
3.9.3. Separation of more than two similarly charged ions	285
3.9.3.1. Separation by a stepwise change in eluent	286
3.9.3.2. Separation by gradient elution	286
3.9.4. Extraction with liquid ion-exchangers	289
3.9.4.1. Cation-exchange equilibria	290
3.9.4.2. Anion-exchange equilibria	291
3.9.5. Ion-exchange paper chromatography	296
3.9.6. Worked examples	297
3.10. Electrophoresis	313
<b>Chapter 4. Tables of Equilibrium Constants</b>	<b>317</b>
4.1. Protonation and complex formation equilibrium constants	317
4.2. Precipitate formation constants	369
4.3. Redox equilibrium constants	375
4.4. Extraction constants	379
4.5. Ion-exchange equilibrium constants	384
References	387
Index	408
