

CHAPTER 1	INTRODUCTION	CONTENTS
1.1	Set Notation	1
1.2	Real Numbers	4
1.3	Inequalities	7
1.4	Rectangular Coordinates	12
1.5	The Straight Line	18
1.6	Intersecting Lines	28
1.7	Linear Inequalities	33
	Chapter Review	42
	Bibliography	44
CHAPTER 2	FUNCTIONS	
2.1	The Concept of a Function	45
2.2	Some Useful Functions	53
	Chapter Review	61
	Bibliography	62
CHAPTER 3	MATHEMATICAL MODELS	
3.1	Introduction	63
3.2	Models from Business	63
3.3	Linear Business Models; Break-Even Analysis; Straight-Line Depreciation	69
3.4	Quadratic Business Models	77
	Chapter Review	82
	Bibliography	83
CHAPTER 4	INTRODUCTION TO LINEAR PROGRAMMING	
4.1	Introduction	85
4.2	A Geometric Approach to Linear Programming Problems	87
	Chapter Review	102
CHAPTER 5	INTRODUCTION TO MATRIX ALGEBRA WITH APPLICATIONS	
5.1	Preliminary Remarks	103
5.2	Addition of Matrices	108
5.3	Matrix Multiplication	113
5.4	Systems of Equations	126
5.5	Inverse of a Matrix	143
5.6	Applications to Economics, Demography, and Accounting; Leontief Input-Output Model	147
	Chapter Review	156
	Bibliography	160

CHAPTER 6	AN ALGEBRAIC APPROACH TO LINEAR PROGRAMMING: THE SIMPLEX METHOD	
	6.1 Introduction	163
	6.2 The Pivot Operation	165
	6.3 The Simplex Method for Maximizing a Linear Programming Problem	168
	6.4 The Simplex Method for Minimizing a Linear Programming Problem	173
	6.5 Applications	178
	Chapter Review	191
	Bibliography	192
CHAPTER 7	LIMIT AND CONTINUITY	
	7.1 Introduction	193
	7.2 The Limit: Two Intuitive Approaches	193
	7.3 Algebraic Techniques for Evaluating Limits	204
	7.4 Continuous Functions	210
	Chapter Review	218
	Bibliography	220
CHAPTER 8	THE DERIVATIVE	
	8.1 Introduction	221
	8.2 Average Rate of Change	221
	8.3 Instantaneous Rate of Change; the Derivative	230
	8.4 The Derivative of Some Useful Functions	241
	8.5 General Formulas for Differentiation	245
	8.6 Composite Functions; The Power Rule	252
	8.7 Higher Order Derivatives	256
	Chapter Review	258
	Bibliography	259
CHAPTER 9	APPLICATIONS OF THE DERIVATIVE	
	9.1 Introduction	261
	9.2 Relative Maxima and Relative Minima	262
	9.3 Absolute Maximum and Absolute Minimum	273
	9.4 Concavity	276
	9.5 Applied Problems	283
	9.6 Marginal Analysis	291
	9.7 Business Models	
	Optimization of Tax Revenue	297
	Optimal Trade-in Time	298
	Minimizing Storage Cost	299
	Chapter Review	301
	Bibliography	303

CHAPTER 10	THE EXPONENTIAL AND LOGARITHM FUNCTIONS	
10.1	Introduction	305
10.2	The Exponential Function	306
10.3	The Logarithm Function	313
10.4	The Derivative of the Exponential and Logarithm Functions	318
10.5	Logistic Curves	325
	Chapter Review	329
	Bibliography	329
CHAPTER 11	THE INVERSE OF DIFFERENTIATION	
11.1	Introduction	331
11.2	Antiderivatives	332
11.3	The Indefinite Integral	337
11.4	A Technique of Integration: The Power Rule	341
11.5	The Indefinite Integral of e^x and $1/x$	344
11.6	Integration by Parts	346
	Chapter Review	349
	Bibliography	350
CHAPTER 12	THE DEFINITE INTEGRAL AND APPLICATIONS	
12.1	Introduction	351
12.2	The Definite Integral	351
12.3	The Area under a Curve	357
12.4	Business Applications of the Definite Integral	
	The Learning Curve	369
	Consumer's Surplus	371
	Maximizing Profit over Time	374
	Chapter Review	377
	Bibliography	378
CHAPTER 13	INTRODUCTION TO THE THEORY OF SETS; COUNTING TECHNIQUES	
13.1	Introduction	379
13.2	Relations Between Sets	380
13.3	Operations with Sets; Venn Diagrams	384
13.4	Counting	390
13.5	Application of the Techniques of Counting to Survey Analysis	393
13.6	Permutations	396
13.7	Combinations	405
	Chapter Review	411
	Bibliography	415

CHAPTER 14	INTRODUCTION TO PROBABILITY	
14.1	Introduction	417
14.2	Sample Spaces and Assignment of Probabilities	422
14.3	Properties of the Probability of an Event	432
14.4	Probability for Equally Likely Events	440
14.5	Conditional Probability	445
14.6	Independent Events	451
14.7	Bayes' Formula	457
14.8	The Binomial Probability Model	466
	Chapter Review	473
	Bibliography	476
CHAPTER 15	EXPECTATION AND DECISION MAKING	
15.1	Expectation	477
15.2	Applications to Operations Research	484
15.3	Applications to Games of Strategy	
	Introduction	489
	Mixed Strategies	493
	Determination of Optimal Strategy in Two-Person Zero Sum Games with 2×2 Matrices	498
	Determination of Optimal Strategy in Other Two-Person Zero Sum Games Using Geometric Methods	503
	Chapter Review	515
	Bibliography	517
CHAPTER 16	PROBABILITY AND CALCULUS	
16.1	Introduction	519
16.2	Random Variable	520
16.3	Discrete Probability Distributions	522
16.4	Continuous Random Variables	527
16.5	Expectation, Variance, and Standard Deviation	534
16.6	The Normal Distribution	537
	Chapter Review	547
	Bibliography	548
CHAPTER 17	MATHEMATICS OF FINANCE	
17.1	Simple and Compound Interest	549
17.2	Annuity	557
17.3	Amortization and Sinking Funds	562
	Chapter Review	565
	Bibliography	567

APPENDIX I: A REVIEW OF ALGEBRA

A.1 Exponents	569
A.2 Factoring	572
A.3 Solving Equations	574
A.4 Complex Fractions	576
A.5 Absolute Value	577

**Appendix II: THE DEFINITE INTEGRAL AS THE
LIMIT OF A SUM**
