Contents

	Preface	*page* ix
1	**Introduction**	
1.1	The background	1
1.2	Some thumbnail sketches	3
1.3	Substitution of risks	7
1.4	Risk and probability	7
1.5	Decision analysis	8
1.6	An illustrative example	10
1.7	Structure re-examined	13
1.8	The plan of the book	14
2	**The determination of probabilities**	
2.1	Introduction	16
2.2	The enumeration approach	16
2.3	The relative-frequency approach	18
2.4	Mixed collectives	20
2.5	The life table	24
2.6	English life table no. 12	25
2.7	Appropriate actuarial collectives	28
2.8	Other life tables	30
3	**Subjective risk determination**	
3.1	Risk and uncertainty	33
3.2	Assessment by words	35
3.3	Need for scale	36
3.4	Discrete and continuous variables	39
3.5	The EQU method	40
3.6	CDF assessments	41
3.7	Components of risk	43
3.8	Group assessments	44
3.9	Further illustrations	45

4 Calibration and training
4.1 Introduction 49
4.2 Availability of information 49
4.3 Over-confidence of estimators 50
4.4 Some experimental results 52
4.5 Value of additional information 54
4.6 Insensitivity to sample size 56
4.7 Anchoring 57
4.8 Importance of training 60

5 The concept of utility
5.1 Introduction 63
5.2 Background to utility 64
5.3 Measuring utility 66
5.4 Utility and insurance 68
5.5 Multi-attribute utility 71
5.6 Use of hypothetical gambles 74
5.7 The group utility function 75
5.8 Delegation 76

6 Project investment risks
6.1 Basic assessment 80
6.2 Environmental risk 82
6.3 Project diversification 85
6.4 Risk profile 86
6.5 A legal decision 87
6.6 Effects of incrementalism 88
6.7 Small-business risks 89
6.8 High-risk projects 91
6.9 The creaming process 94
6.10 International political risks 95

7 Risk and financial institutions
7.1 Types of financial institution 97
7.2 Clearing banks 98
7.3 Judgemental gates 100
7.4 Insurance and pension funds 102
7.5 Stock markets 104
7.6 High-risk finance 106
7.7 Small-business finance 108
7.8 Loan guarantees 110
7.9 Index-linked bonds 112

8 Risk and portfolio investment
8.1 Introduction 116
8.2 Share variability 116

8.3 Portfolio diversification 118
8.4 Portfolio risk 120
8.5 Portfolio theory 122
8.6 Capital assets pricing model 124
8.7 Some empirical verification 126
8.8 International investment 127
8.9 Commentary 128

9 Gambling and speculation
9.1 Gambling scenarios 130
9.2 Gambling systems 133
9.3 Skill and probabilities 135
9.4 Insider trading 137
9.5 Gambling and insurance 138
9.6 Gambling, investment and speculation 140
9.7 Investment versus speculation 143

10 Physical risk and its perception
10.1 Introduction 147
10.2 Degree of exposure 149
10.3 Incidence and consequence 150
10.4 Perceived risk 151
10.5 Travel fatalities 154
10.6 Risk in physical systems 156
10.7 Catastrophes 158
10.8 Cost/benefit ratio for risk reduction 160

11 Morbidity and medicine
11.1 Introduction 163
11.2 The total risk concept 163
11.3 Comparisons of energy risks 165
11.4 Medical risks 166
11.5 The smoking controversy 169
11.6 A clinical decision 173
11.7 Life expectancy criterion 174

12 Risk in public policy
12.1 Introduction 178
12.2 Social policies 179
12.3 Accidental deaths 181
12.4 The smoking story 183
12.5 Total safety 184
12.6 The cost of safety 185
12.7 The *Concorde* saga 188
12.8 The decision to prosecute 191
12.9 The political angle 192

Appendix A: Handling probabilities

A.1 Introduction 196
A.2 Addition of probabilities 196
A.3 Multiplication of probabilities 197
A.4 Combination of rules 199
A.5 Fault analysis 200
A.6 Bayes' approach 201
A.7 Bayes' theorem 202
A.8 Expectation 204

Appendix B: Decision-making procedures

B.1 Introduction 205
B.2 Problem solving 205
B.3 Choice of action 206
B.4 Comparison of methods 211

Appendix C: Reduction of risks

C.1 Introduction 214
C.2 Minimum risk choice 215
C.3 Reducing project risk 217
C.4 Pooling risks 218

Exercises 221

Bibliography 234

Index 241
