Editor's Statement	xv
Section Editor's Foreword	xvii
Preface	xix
1. Measurement Theory	xix
2. Other Books on the Subject	xx
3. Use as a Textbook	xx
4. Acknowledgments	xxi
References	xxii
<b>Introduction</b>	<b>1</b>
1. Measurement	1
2. The Measurement Literature	5
3. Decisionmaking	5
4. Utility	6
5. Mathematics	8
6. Organization of the Book	9
References	11
<b>Chapter 1. Relations</b>	<b>13</b>
1.1 Notation and Terminology	13
1.2 Definition of a Relation	13
1.3 Properties of Relations	19
1.4 Equivalence Relations	25
1.5 Weak Orders and Simple Orders	28
1.6 Partial Orders	36
1.7 Functions and Operations	41
1.8 Relational Systems and the Notion of Reduction	44
References	46

<b>Chapter 2. Fundamental Measurement, Derived Measurement, and the Uniqueness Problem</b>	<b>49</b>
2.1 The Theory of Fundamental Measurement	49
2.1.1 Formalization of Measurement	49
2.1.2 Homomorphisms of Relational Systems	51
2.1.3 The Representation and Uniqueness Problems	54
2.2 Regular Scales	57
2.2.1 Definition of Regularity	57
2.2.2 Reduction and Regularity	60
2.3 Scale Type	64
2.4 Examples of Meaningful and Meaningless Statements	71
2.5 Derived Measurement	76
2.6 Some Applications of the Theory of Meaningfulness: Energy Use, Air Pollution, and the Consumer Price Index	81
2.6.1 Energy Use; Arithmetic and Geometric Means	81
2.6.2 Consumer Price Index	84
2.6.3 Measurement of Air Pollution	87
References	98
<b>Chapter 3. Three Representation Problems: Ordinal, Extensive, and Difference Measurement</b>	<b>101</b>
3.1 Ordinal Measurement	101
3.1.1 Representation Theorem in the Finite Case	101
3.1.2 The Uniqueness Theorem	108
3.1.3 The Countable Case	109
3.1.4 The Birkhoff-Milgram Theorem	111
3.2 Extensive Measurement	122
3.2.1 Hölder's Theorem	122
3.2.2 Necessary and Sufficient Conditions for Extensive Measurement	126
3.2.3 Uniqueness	129
3.2.4 Additivity	131
3.3 Difference Measurement	134
3.3.1 Algebraic Difference Structures	134
3.3.2 Necessary and Sufficient Conditions	139
3.3.3 Uniqueness	141
References	146
<b>Chapter 4. Applications to Psychophysical Scaling</b>	<b>149</b>
4.1 The Psychophysical Problem	149
4.1.1 Loudness	149
4.1.2 The Psychophysical Function	150

4.2	The Possible Psychophysical Laws	158
4.2.1	Excursis: Solution of the Cauchy Equations	159
4.2.2	Derivation of the Possible Psychophysical Laws	164
4.3	The Power Law	179
4.3.1	Magnitude Estimation	179
4.3.2	Consequences of the Power Law	181
4.3.3	Cross-Modality Matching	182
4.3.4	Attitude Scaling	184
4.4	A Measurement Axiomatization for Magnitude Estimation and Cross-Modality Matching	186
4.4.1	Consistency Conditions	186
4.4.2	Cross-Modality Ordering	188
4.4.3	Magnitude Estimation as a Ratio Scale	189
	References	193
<b>Chapter 5.</b>	<b>Product Structures</b>	<b>197</b>
5.1	Obtaining a Product Structure	197
5.2	Calculating Ordinal Utility Functions by Reducing the Dimensionality	203
5.3	Ordinal Utility Functions over Commodity Bundles	206
5.4	Conjoint Measurement	210
5.4.1	Additivity	210
5.4.2	Conjoint Measurement and the Balance of Trade	214
5.4.3	The Luce-Tukey Theorem	215
5.4.4	Conjoint Measurement under Equal Spacing	222
5.4.5	Scott's Theorem	224
5.5	Nonadditive Representations	232
5.5.1	Decomposability and Polynomial Conjoint Measurement	232
5.5.2	Nondecomposable Representations	235
5.6	Joint Scales of Individuals and Alternatives	238
5.6.1	Guttman Scales	238
5.6.2	Unfolding	239
	References	243
<b>Chapter 6.</b>	<b>Nontransitive Indifference, Probabilistic Consistency, and Measurement without Numbers</b>	<b>247</b>
6.1	Semiororders and Interval Orders	247
6.1.1	Nontransitivity of Indifference	247
6.1.2	The Scott-Suppes Theorem	250
6.1.3	Uniqueness	252
6.1.4	Interval Orders and Measurement without Numbers	253

6.1.5	Compatibility between a Weak Order and a Semiorde	255
6.1.6	Uniqueness Revisited	258
6.1.7	Proof of the Scott-Suppes Theorem	260
6.1.8	Semiorde	264
6.2	The Theory of Probabilistic Consistency	272
6.2.1	Pair Comparison Systems	272
6.2.2	Probabilistic Utility Models	273
6.2.2.1	The Weak Utility Model	273
6.2.2.2	The Strong Utility Model	275
6.2.2.3	The Fechnerian Utility Model	277
6.2.2.4	The Strict Utility Model	280
6.2.3	Transitivity Conditions	283
6.2.4	Homogeneous Families of Semiorde	287
6.2.5	Beyond Binary Choices	290
	References	299
<b>Chapter 7.</b>	<b>Decisionmaking under Risk or Uncertainty</b>	<b>305</b>
7.1	The Expected Utility Rule and the Expected Utility Hypothesis	305
7.2	Use of the EU Rule and Hypothesis in Decisionmaking	312
7.2.1	Lotteries	312
7.2.2	Utility from Expected Utility	317
7.2.3	A Basic Reference Lottery Ticket	322
7.2.4	The Utility of Money	325
7.2.5	The Allais Paradox	327
7.2.6	The Public Health Problem: The Value of a Life	329
7.3	Multidimensional Alternatives	336
7.3.1	Reducing Number of Dimensions	336
7.3.2	Additive Utility Functions	337
7.3.3	Quasi-additive Utility Functions	340
7.4	Mixture Spaces	352
7.5	Subjective Probability	364
	References	365
<b>Chapter 8.</b>	<b>Subjective Probability</b>	<b>369</b>
8.1	Objective Probability	369
8.2	Subjective Probability	371
8.3	Direct Estimation of Subjective Probability	374
8.4	Subjective Probability from Preferences among Lotteries: The SEU Hypothesis	379

8.4.1	If Utility Is Known	379
8.4.2	If Utility Is Not Known	380
8.4.3	The Savage Axioms for Expected Utility	382
8.5	The Existence of a Measure of Subjective Probability	386
8.5.1	The de Finetti Axioms	386
8.5.2	Insufficiency of the de Finetti Axioms	388
8.5.3	Conditions Sufficient for a Subjective Probability Measure	390
8.5.4	Necessary and Sufficient Conditions for a Subjective Probability Measure in the Finite Case	392
8.5.5	Necessary and Sufficient Conditions for a Subjective Probability Measure in the General Case	394
	References	400
	Author Index	405
	Subject Index	411
