Editor's Statement		
Chapter 0	Elements of Functional Analysis	
1	Banach and Hilbert Spaces. Bounded Operators. Integration of Vector-Valued Functions	
2	Linear Functionals: The Dual Space. Vector-Valued Analytic Functions	
3	Unbounded Operators; the Resolvent. Closed Operators6	
4	Adjoints	
5	Generalized Sequences. Weak Convergence	
6	Normal, Symmetric, Self-Adjoint, and Unitary	
	Operators in Hilbert Space	
7	Some Special Spaces and Their Duals	
8	Convolution and Mollifiers. Sobolev Spaces	
Chapter 1	The Cauchy Problem for Some Equations of Mathematical Physics: The Abstract Cauchy Problem26	
1.1 1.2	The Heat Equation in a Square	

1.3	The Diffusion Equation in a Square
1.4	The Schrödinger Equation
1.5	The Cauchy Problem in $(-\infty, \infty)$
1.6	The Maxwell Equations
1.7	Miscellaneous Notes
Chapter 2	Properly Posed Cauchy Problems: General Theory
2.1	The Cauchy Problem in $t \ge 0$
2.2	The Cauchy Problem in $-\infty < t < \infty$. The Adjoint
	Equation
2.3	Semigroup Theory
2.4	The Inhomogeneous Equation
2.5	Miscellaneous Comments
Chapter 3	Dissipative Operators and Applications
3.1	Dissipative Operators
3.2	Ordinary Differential Operators in the Whole Line 125
3.3	Ordinary Differential Operators in a Closed Interval.
	Semi-Infinite Intervals
3.4	Ordinary Differential Operators in a Compact Interval 142
3.5	Symmetric Hyperbolic Systems in the Whole Space146
3.6	Isometric Propagators and Conservative Operators.
	Dissipative Operators in Hilbert Space
3.7	Differential Equations in Banach Lattices. Positive
	Solutions. Dispersive Operators
3.8	Miscellaneous Comments
Chapter 4	Abstract Parabolic Equations: Applications to
	Second Order Parabolic Equations
4.1	Abstract Parabolic Equations
4.2	Abstract Parabolic Equations; Analytic Propagators 179
4.3	Applications to Ordinary Differential Operators
4.4	Second Order Partial Differential Operators.
	Dissipativity
4.5	Second Order Partial Differential Operators.
	Assignation of Boundary Conditions
4.6	Second Order Partial Differential Operators.
	Construction of <i>m</i> -Dissipative Extensions in L^2
4.7	Regularity Theorems
4.8	Construction of <i>m</i> -Dissipative Extensions in $L^{p}(\Omega)$ and
	$C(\overline{\Omega})$
4.9	Analyticity of Solution Operators

4.10	Positivity and Compactness of Solution Operators
4.11	Miscellaneous Comments
Chapter 5	Perturbation and Approximation of Abstract Differential
	Equations
5.1	A Perturbation Result
5.2	The Neutron Transport Equation
5.3	Perturbation Results for Operators in $\mathcal{C}(1,0)$ and in \mathcal{C} 286
5.4	Perturbation Results for the Schrödinger and Dirac
	Equations
5.5	Second Order Differential Operators
5.6	Symmetric Hyperbolic Systems in Sobolev Spaces
5.7	Approximation of Abstract Differential Equations
5.8	Approximation of Abstract Differential Equations by
5.0	Miscellancous Commente
5.9	
Chapter 6	Some Improperly Posed Cauchy Problems
6.1	Improperly Posed Problems
6.2	The Reversed Cauchy Problem for Abstract
	Parabolic Equations
6.3	Fractional Powers of Certain Unbounded Operators 357
6.4	Fractional Powers of Certain Unbounded Operators
	(Continuation)
6.5	An Application: The Incomplete Cauchy Problem
6.6	Miscellaneous Comments
Chapter 7	The Abstract Cauchy Problem for Time-Dependent
	Equations
7.1	The Abstract Cauchy Problem for Time-Dependent
	Equations
7.2	Abstract Parabolic Equations
7.3	Abstract Parabolic Equations: Weak Solutions
7.4	Abstract Parabolic Equations: The Analytic Case 409
7.5	The Inhomogeneous Equation
7.6	Parabolic Equations with Time-Dependent Coefficients
/./	The General Case
/.8	in the Whole Space
7.0	The Case where $D(A(t))$ is Independent of t
1.9	The Inhomogeneous Equation 451
7.10	Miscellaneous Comments

Chapter 8	The Cauchy Problem in the Sense of Vector-Valued Distributions
8.1	Vector-Valued Distributions. Supports, Convergence,
	Structure Results
8.2	Vector-Valued Distributions. Convolution, Tempered
	Distributions, Laplace Transforms
8.3	Convolution and Translation Invariant Operators.
	Systems: The State Equation
8.4	The Cauchy Problem in the Sense of Distributions
8.5	The Abstract Parabolic Case
8.6	Applications: Extensions of the Notion of
	Properly Posed Cauchy Problem
8.7	Miscellaneous Comments
