Preface	ix
1 Basic concepts and results	1
1.1 Some basic concepts	1
1.2 Graph theory	6
2 Models of computation	17
2.1 Random access machines	17
2.2 Time and space complexity	22
2.3 Problems and languages	26
3 Data structures	31
3.1 Array and record	31
3.2 Lists	34
3.3 Rooted trees	40
3.4 Sets	42
3.5 Search trees	46
3.6 Balancing binary trees	50
3.7 Heap	55
3.8 Factor set	58
3.9 Representation of graphs	61
4 Graph searching	64
4.1 Searching a rooted tree	64
4.2 Graph searching	68
4.3 Backtracking and the method of branches and bounds	73
5 Sorting	77
5.1 Sorting in time $O(n \log n)$	77
5.2 Quicksort	79

5.3 Lower bounds	82
5.4 Sorting by distribution	84
6 Problems solvable in polynomial time	91
6.1 Paths in graphs	91
6.2 Minimum spanning tree of a graph	99
6.3 Flows in networks	105
6.4 Maximum matching	120
6.5 Components of graphs	128
6.6 Isomorphism of trees	134
6.7 Planarity testing of graphs	139
6.8 Isomorphism of planar graphs	147
7 NP-complete problems	159
7.1 Introduction	159
7.2 Problems solvable in polynomial-bounded time	163
7.3 Problems solvable non-deterministically in polynomial- bounded time	165
7.4 NP-complete problems	169
7.5 Graph colouring	177
7.6 Searching an independent set	181
7.7 Coverings of sets	184
7.8 Integer problems	187
7.9 The travelling salesman problem	191
7.10 Further NP-complete problems	194
8 Classes of difficult problems	200
8.1 Properties of the class NP	200
8.2 Space complexity	204
8.3 PSPACE-completeness	206
9 Heuristic methods	214
9.1 Graph colouring	214
9.2 Hamiltonian path and circuit	220
9.3 The travelling salesman problem	223
9.4 Isomorphism of graphs	230
10 Probabilistic analysis of algorithms	234
10.1 Introduction	234
10.2 Sorting	236
10.3 Searching in dictionaries	239

Contents

vii

10.4 Random graphs	243
10.5 Algorithms and random graphs	248
10.6 Primality	251
Bibliography	253
Index	267
