

Contents

Chapter I. Introduction	1
Literature cited	12
Chapter II. Theoretical Concepts of the Role of Electrical Phenomena in the Breakdown of Adhesion and the Fracture of Solids	15
§1. General remarks on the problem of adhesion.	15
§2. Principal conclusions from theory of elec- trostatic component of adhesion	22
§3. Role of electrostatic forces in adhesion phenomena, and the relation between elec- trostatic interaction and the chemical nature of the contacting bodies	24
§4. Analysis of macroscopic approximation in calculating the force of adhesion	26
§5. Critical review of earlier studies	31
Literature cited	38
Chapter III. Experimental Investigation of Electroadhesion and Electrocohe- sion Phenomena in the Breakdown of Adhesive Contact of Solids and the Fracture of Crystals	39
§1. Introduction	39

§2. Neutralization of electrical double layer charges by gas discharge in the process of detachment	43
Gas discharge phenomena in the process of detachment	44
Emission of radio waves in breakdown of adhesion	57
Residual surface charges after detachment	59
§3. Relationships for polymer film detachment in liquid media	61
§4. Effect of ionizing radiation on adhesion.	63
§5. Obtaining adhesive contact by the action of an external electric field	65
§6. Gas discharge phenomena during fracture of crystals.	66
§7. Exoelectron emission	74
§8. Emission of fast electrons in adhesive contact breaking or crystal cleavage	77
Topography of emitting surface and influence of mechanical working on emission	84
Velocity of emitted electrons and adhesion	85
Emission intensity and adhesion	86
§9. Influence of chemical nature of contacting surfaces on intensity of fast-electron emission	92
Emission of fast electrons in fracture of crystals.	99
Electron emission in deformation and abrasion of polymers	100
§10. Properties of surfaces freshly formed by breaking an adhesive bond or by mechanical breakdown of polymers.	104
§11. Radiation effect of fast electrons.	109
Literature cited.	114
 Chapter IV. Theory of the Electrostatic Component of Adhesion	 119
§1. The electrical double layer caused by donor-acceptor bonding at boundaries between amorphous solids, and its role in adhesion phenomena.	119

§2. Investigation of general relationships in behavior of electrostatic component in contact of a metal and a semiconductor with an arbitrary spectrum of surface states	129
§3. Role of surface properties in double-layer formation and adhesion phenomena	139
Calculation of electrostatic component of adhesive force at the contact of a metal and a semiconductor with surface states of two types	139
Statement and solution of the problem . . .	141
§4. Determination of specific force of adhesion (sticking pressure) upon contact of a metal with a semiconductor film	146
§5. Study of adhesive force with semiconductor interlayer between two metals, and correlation of results	151
§6. Role of tunneling in breakdown of double layer. .	166
Literature cited	175

Chapter V. Electroadhesion Phenomena on Semiconductors	177
§1. Introduction.	177
§2. The space-charge layer.	179
§3. Surface recombination velocity	182
§4. Surface states of semiconductors	184
§5. Methods of investigating semiconductor surfaces with formation of an adhesive contact.	186
Dc field-effect method.	186
Photoconductivity decay method and determination of minority carrier lifetime	188
Combination field-effect method with large sinusoidal signals and steady-state photoconductivity	189
Monitoring the operation of semiconductor devices	192
Method for determining contact potential difference	193

Method for determining electrophysical parameters of polymer/semiconductor surface and adhesion in vacuum	194
Specimen preparation	198
Etching germanium specimens	199
Application of polymeric films to semiconductor surfaces	200
§6. Investigation of changes in electrophysical properties of germanium surface when an adhesive bond is formed	202
§7. Electrical phenomena in breaking adhesive bonds between semiconductors and polymers.	211
§8. Comparison with theory.	219
§9. Methods of protecting germanium surfaces by application of varnishes and treatment with organosilicon compounds	221
Literature cited	227
 Chapter VI. Adhesion of Dielectrics	 229
§1. Introduction.	229
§2. Interfacial chemical interactions of polymers and functional groups	231
§3. Investigation of contact surface by IR spectroscopy	234
§4. Relation between electroadhesion phenomena and the chemical structure of interfacial compounds	239
§5. Methods of regulating adhesion properties	246
§6. Chemistry of adhesion interactions	253
Literature cited	254
 Chapter VII. Sticking of Polymers	 257
§1. Introduction.	257
§2. Factors in strength of adhesive bonding between polymers	258
§3. Role of polymer chain diffusion in mechanism of sticking and self-sticking of polymers	263
Literature cited	277

Chapter VIII. Sticking and Adhesion of Convex Solid Bodies and Powders.	279
§1. Introduction.	279
§2. Thermodynamic theory of adhesion at "convex" contact.	282
Influence of forces of adhesion on contact deformation	288
§3. Sticking and adhesion of particles in liquid media	295
§4. Study of the sticking and adhesion of surfaces in liquid media	298
Modeling the interaction of colloidal particles	298
Crossed-fiber method.	300
Simulation of colloidal particle interaction on the basis of the crossed-fiber method	302
§5. Influence of liquid medium on particle sticking .	310
Adhesion of spherical particles in a liquid	311
Interaction of particles in the presence of capillary-condensed liquid	313
Influence of liquid bridge	317
Influence of relative vapor pressure on particle adhesion.	320
§6. Sticking and adhesion of particles in a dry atmosphere.	322
§7. Kinetic adhesion and tack.	343
Literature cited.	355
 Chapter IX. Influence of Adhesion on Friction.	359
§1. Influence of electrical double layer on rolling friction.	359
Electrical component of rolling friction . .	359
§2. Investigation of the velocity dependence of rolling friction as a method of studying adhesion.	374
§3. Influence of adhesion on external sliding friction	380
Literature cited.	386
 Conclusion	389

Appendix	391
A. Methods of adhesiometry	391
Pendulum adhesiometer of Deryagin	391
Bifilar adhesiometer of Deryagin	393
Three-roll adhesiometer of Deryagin	395
Rotating-plate method of Deryagin and Krotova	396
Determination of adhesion of nonwetting liquid to solid surface under nonequilib- rium conditions	397
Methods of measuring adhesion in liquid media	400
Roll adhesiometer	401
Vacuum roll adhesiometers	404
Adhesiometers with present detachment velocity	405
Adhesiometer with periodic detachment	408
Determination of adhesion with ultra- centrifuge	413
A. The form of a strip during detachment	416
C. The effect of contact deformation on particle adhesion	423
Background	423
Determination of the shape of the surface of a spherical elastic particle near the zone of particle contact with a flat rigid surface	424
Macroscopic calculation of sticking force with allowance for contact deformation of ball	430
Summary	442
D. The effect of discrete structure of charges of the double layer on the electrostatic component of adhesion	443
Literature cited	455
