

CONTENTS

Chapter 1	Introduction	1
1.1	Purpose,	1
1.2	Descriptive Statistics and Inferential Statistics,	2
1.3	Probability,	2
1.3.1	Probability Concepts,	2
	<i>Classical Interpretation of Probability,</i>	3
	<i>Frequency Interpretation of Probability,</i>	4
	<i>Subjective Interpretation of Probability,</i>	5
1.3.2	Laws of Probability,	5
1.4	Random Variable and Probability Density Functions,	9
1.4.1	Discrete and Continuous Random Variables,	10
1.4.2	Probability Density Functions,	10
1.4.3	Expectation (Moments),	11
1.5	Specific Probability Density Functions,	13
1.5.1	Univariate Probability Density Functions,	13
	<i>Univariate Normal pdf,</i>	13
	<i>Uniform pdf,</i>	16
	<i>Other pdfs,</i>	17
1.5.2	Multivariate Probability Density Functions,	18
1.6	Sampling in Statistical Inference,	19
1.6.1	Populations,	19
1.6.2	The Sampling Process,	19
1.6.3	Sampling Distributions,	20
	<i>Chi-Square,</i>	21

	<i>Student's t</i> , 22	
	<i>F Distribution</i> , 29	
1.7	Statistical Inference, 29	
1.7.1	Point Estimation, 29	
	<i>Method of Moments</i> , 30	
	<i>Method of Maximum Likelihood</i> , 30	
	<i>Least Squares and Generalized Least Squares</i> , 32	
1.7.2	Properties of Estimators, 33	
	<i>Unbiased Estimators</i> , 33	
	<i>Consistent Estimators</i> , 34	
	<i>Efficient Estimators</i> , 34	
	<i>Sufficient Estimators</i> , 34	
1.7.3	Interval Estimation, 34	
	<i>Confidence Interval</i> , 34	
	<i>Exact Confidence Intervals</i> , 35	
	<i>Confidence Intervals Based on Large-Sample Theory</i> , 36	
	<i>Other Statistical Intervals</i> , 37	
1.7.4	Hypothesis Testing, 37	
	<i>Principles of Hypothesis Testing</i> , 37	
	<i>Exact Tests of Hypotheses</i> , 39	
	<i>Large-Sample Tests</i> , 40	
1.8	Mathematical Models, 41	
1.8.1	Mathematical Model for Measurement Errors, 42	
1.9	Matrix Algebra, 44	
Chapter 2	The Common Precision Model	49
2.1	Introduction, 49	
2.2	$N = 2$ Measurement Methods, 49	
2.2.1	Point Estimate of σ_0^2 , 49	
2.2.2	Confidence Interval Estimate of σ_0^2 , 52	
2.2.3	Testing Hypotheses About σ_0^2 , 52	
2.2.4	Estimation of Relative Biases, 56	
2.3	$N \geq 3$ Measurement Methods, 57	
2.3.1	Point Estimate of σ_0^2 , 57	

Approach 1: Paired Differences, 57

Approach 2: Analysis of Variance, 58

2.3.2 Confidence Interval Estimate of σ_0^2 , 58

2.3.3 Testing Hypotheses About σ_0^2 , 59

2.3.4 Estimation of Relative Biases, 59

Chapter 3 $N = 2$ Measurement Methods

65

3.1 Introduction, 65

3.2 Grubbs' Estimators, 65

3.3 Maximum Likelihood Estimators (MLE's), 66

3.3.1 Random Model, 66

3.3.2 Fixed Model, 67

3.4 Inference, 71

3.4.1 Interval Estimation, 71

Confidence Interval on σ_i^2 , 71

*Simultaneous Confidence Region on σ_1^2 , σ_2^2 ,
and σ_μ^2 , 73*

3.4.2 Hypothesis Testing, 76

Test of $H_{01}: \sigma_1^2 = \sigma_2^2$, 77

Test of $H_{02}: (\sigma_1^2 + \sigma_2^2) = \sigma_0^2$, 79

Large-Sample Tests, 80

3.5 Constrained Maximum Likelihood Estimation
(CMLE), 85

3.5.1 Negative Estimate of Precision, 85

3.5.2 Negative Estimate of Process Variance, 85

3.6 Constrained Expected Likelihood Estimation
(CELE), 87

3.7 Estimation of Relative Biases, 90

Appendices

3.A Derivation of Maximum Likelihood Estimates for Random
Model, 92

3.B Proof That the Maximum Likelihood Estimates Are
 $(n - 1)/n$ Times the Grubbs' Estimators for Random
Model, 95

3.C Derivation of Maximum Likelihood Estimates for Fixed
Model, 96

3.D Derivation of $L(\hat{\Omega})$, Equation 3.4.14, 98

- 3.E Derivation of Constrained Maximum Likelihood Estimates If One Precision Estimate Is Negative, 99
- 3.F Derivation of Constrained Maximum Likelihood Estimates If s_{12} Is Negative, 100
- 3.G Derivation of Constrained Expected Likelihood Estimates Results, Section 3.6, 101

Chapter 4 $N = 3$ Measurement Methods: Inference Based on Paired Differences

105

- 4.1 Introduction, 105
- 4.2 Grubbs' Estimators, 106
- 4.3 Maximum Likelihood Estimators (MLE's), 106
- 4.4 Inference, 110
 - 4.4.1 Interval Estimation, 111
 - Confidence Interval on σ_i^2 , 111*
 - Confidence Intervals Based on Large-Sample Theory, 114*
 - 4.4.2 Hypothesis Testing, 116
- 4.5 Constrained Maximum Likelihood Estimation (CMLE), 120
- 4.6 Constrained Expected Likelihood Estimation (CELE), 123
- 4.7 Estimation of Relative Biases, 126

Appendices

- 4.A Derivation of Maximum Likelihood Estimates, 128
- 4.B Proof That Maximum Likelihood Estimates Are $(n - 1)/n$ Times Grubbs' Estimators, 131
- 4.C Derivation of Confidence Intervals Based on Large-Sample Theory, 133
- 4.D Derivation of $L(\hat{\Omega})$, Equation 4.4.5, 135
- 4.E Derivation of Maximum Likelihood Estimators of σ_0^2 and of $L(\hat{\omega})$ When Precisions Are Equal, 136
- 4.F Proof That No More Than One Precision Estimate Can Be Negative, 137
- 4.G Derivation of Constrained Maximum Likelihood Estimates (CMLE's), 138
- 4.H Derivation of Constrained Expected Likelihood Estimates (CELE's), 139

Chapter 5	$N \geq 4$ Measurement Methods: Inference Based on Paired Differences	143
5.1	Introduction, 143	
5.2	Grubbs' Estimators, 143	
5.3	Maximum Likelihood Estimators (MLE's), 144	
5.4	Inference, 157	
5.4.1	Confidence Intervals on σ_i^2 , 157	
	<i>Confidence Intervals Based on Grubbs' Estimates, 157</i>	
	<i>Confidence Intervals Based on Large-Sample Theory, 157</i>	
5.4.2	Hypothesis Testing, 161	
5.5	Constrained Maximum Likelihood Estimation (CMLE), 169	
5.6	Estimation of Relative Biases, 171	
Appendices		
5.A	Derivation of Grubbs' Estimators, 173	
5.B	Derivation of Maximum Likelihood Estimators (MLE's), 175	
5.C	Derivation of Confidence Intervals Based on Large-Sample Theory, 177	
5.D	Derivation of Constrained Maximum Likelihood Estimates (CMLE's), 179	
5.E	Derivation of Maximum Likelihood Estimator (MLE) of σ_0^2 and of $L(\hat{\omega})$ When Precisions are Equal, 181	
Chapter 6	$N \geq 3$ Measurement Methods: Inference Based on Original Data	183
6.1	Introduction, 183	
6.2	Grubbs' Estimators, 184	
6.3	Maximum Likelihood Estimators (MLE's), 185	
6.3.1	Maximum Likelihood Estimators (MLE's) for the Random Model, 185	
6.3.2	Maximum Likelihood Estimators (MLE's) for the Fixed Model, 187	
6.4	Inference, 200	

- 6.4.1 Confidence Intervals on σ_i^2 , 201
 - Moment Estimation*, 201
 - Confidence Intervals Based on MLE's, Random Model*, 201
- 6.4.2 Hypothesis Testing, 204
- 6.5 Constrained Maximum Likelihood Estimators (CMLE's), 212
 - 6.5.1 Constrained Maximum Likelihood Estimates (CMLE's) for Random Model, 212
 - 6.5.2 Constrained Maximum Likelihood Estimates (CMLE's) for Fixed Model, 212
 - 6.5.3 Interval Estimation for Constrained Maximum Likelihood Estimates (CMLE's), 213
- 6.6 Estimation of Relative Biases, 215
- 6.7 Guidance in Choosing an Estimator, 216

Appendices

- 6.A Least Squares Estimators (LSE's) Derived from Moment Equations, 218
- 6.B Maximum Likelihood Estimators (MLE's) for Random Model, 221
- 6.C Derivation of Elements of H Matrix, Section 6.4.1, 226
 - 6.C.1 Derive Equation 6.4.3, 227
 - 6.C.2 Derive Equation 6.4.4, 227
 - 6.C.3 Derive Equation 6.4.5, 228
 - 6.C.4 Derive Equation 6.4.6, 229
- 6.D Derivation of Maximum Likelihood Estimator of σ_0^2 for the Random Model, 230
- 6.E Derivation of Constrained Maximum Likelihood Estimates for Random Model, 233
- 6.F Derivation of Constrained Maximum Likelihood Estimates for Fixed Model, 235

Chapter 7 Comparison of Moment and Maximum Likelihood Estimation Methods

239

- 7.1 Introduction, 239
- 7.2 Comparisons Between Moment and Maximum Likelihood Estimators, 240

- 7.2.1 $N = 2; \sigma_1^2 = 0$, 240
 7.2.2 $N \geq 3; \sigma_1^2 = 0$, 241
 7.2.3 $N \geq 3; \sigma_i^2 = \sigma_0^2$ for All i , 242
 7.2.4 $N = 3; \sigma_1^2 = \sigma_2^2 = \sigma_0^2; \sigma_3^2 \neq \sigma_0^2$, 243
- 7.3 Conjectures About Methods of Parameter Estimation, 244
- 7.4 Proofs of Conjecture 2 for Specific Cases, 246
- 7.4.1 $N = 2; \sigma_1^2 = 0$, 246
 7.4.2 $N = 3; \sigma_1^2 = 0$, 248
 7.4.3 $N = 3; \sigma_1^2 = \sigma_2^2 = \sigma_0^2; \sigma_3^2 \neq \sigma_0^2$, 249
- 7.5 Demonstration of Conjecture 2 by Example, 250
- 7.5.1 $N = 4; \sigma_1^2 \neq \sigma_2^2 \neq \sigma_3^2 \neq \sigma_4^2$, 250
 7.5.2 $N = 6; \sigma_1^2 \neq \sigma_2^2 \neq \dots \neq \sigma_6^2$, 252
 7.5.3 $N = 6; \sigma_1^2 = \sigma_2^2 = \sigma_3^2 = \delta_1^2; \sigma_4^2 = \sigma_5^2 = \delta_2^2; \sigma_6^2 = \delta_3^2$, 252

Appendices

- 7.A Derivation of Moment Estimators for $N = 2; \sigma_1^2 = 0$: Equations 7.2.4 and 7.2.5, 257
 7.B Derivation of Moment Estimators for $N \geq 3; \sigma_i^2 = 0$: Equation 7.2.7, 258
 7.C Derivation of Maximum Likelihood Estimators for $N = 3; \sigma_1^2 = \sigma_2^2 = \sigma_0^2; \sigma_3^2 = \sigma_0^2$: Equations 7.2.10 and 7.2.11, 259
 7.D Derivation of Equation 7.4.27, 261

Chapter 8 Bibliography 263

Chapter 9 Computer Programs 265

- 9.A Results for Paired Data, 267
 9.B Results for Original Data and Constant Bias Model, 270
 9.C Results for Original Data and Nonconstant Bias Model, 275
 9.D Program 1—Paired Data, 280
 9.E Program 2—Original Data, 284
