

## TABLE OF CONTENTS

PREFACE	v
CHAPTER 1 : THE KORTEWEG-DE VRIES EQUATION	1
1.1. Historical introduction	1
1.2. Elementary properties	3
1.3. The soliton behaviour	6
1.4. The initial value problem. Existence and uniqueness of solutions	7
1.5. Miura's transformation and the modified K.d.V. equation	8
CHAPTER 2 : SOLUTION BY THE METHOD OF GARDNER-GREEN-KRUSKAL- MIURA. THE INVERSE SCATTERING TRANSFORMATION	13
2.1. The scattering problem for the Schrödinger equation on the line	14
2.2. Invariance of the spectrum for potentials satisfying the K.d.V. equation	16
2.3. Evolution of the scattering data	20
2.3.1. Evolution of the eigenfunctions	20
2.3.2. Evolution of the normalization coefficient $C_n(t)$	21
2.3.3. Evolution of the reflection coefficient $b(k,t)$	24
2.4. Summary and discussion of the method of solution by the inverse scattering transformation	26
2.5. The pure N-soliton solution	29
2.6. The pure 2-soliton solution: an exercise	35
2.7. Relation between soliton speed and eigenvalues	38
2.8. The emergence of solitons from arbitrary initial conditions	45
2.8.1. Formulation of the problem	46

2.8.2. Analysis of $\Omega_c$ and $T_c$	47
2.8.3. Solution of the Gel'fand-Levitan equation	49
2.8.4. Decomposition of the solution and estimates	50
 CHAPTER 3 : ISOSPECTRAL POTENTIALS. THE LAX APPROACH	 53
3.1. The invariance of discrete eigenvalues by an elementary approach	58
3.2. The invariance of the spectrum	60
3.3. Isospectral potentials for the Schrödinger equation	64
3.4. Isospectral potentials for more general selfadjoint operators	67
3.5. An alternative approach	69
 CHAPTER 4 : DIRECT AND INVERSE SCATTERING FOR THE SCHRÖDINGER EQUATION	 75
4.1. Solutions and scattering data of Schrödinger's equation	78
4.2. Properties of solutions	83
4.2.1. Reformulation as integral equations	84
4.2.2. Existence and uniqueness for $\text{Im } k \geq 0, k \neq 0$	86
4.2.3. Regularity for $\text{Im } k \geq 0, k \neq 0$	90
4.2.4. Asymptotic behaviour	94
4.2.5. The behaviour near $k = 0$	97
4.2.6. Parameter-dependent potentials	102
4.3. The spectrum of $-\frac{d^2}{dx^2} + u$ on $L_2(\mathbb{R})$	103
4.4. Fourier transform of the solutions	117
4.5. Inverse scattering	130
4.6. Concluding remarks	139
 CHAPTER 5 : DIRECT AND INVERSE SCATTERING FOR THE GENERALIZED ZAKHAROV-SHABAT SYSTEM	 141
5.1. Solutions and scattering coefficients of the generalized Zakharov-Shabat system	143

5.2. Properties of solutions	146
5.3. The spectrum of $\begin{pmatrix} i & 0 \\ 0 & -i \end{pmatrix} (\frac{d}{dx} - Q)$ on $L_2(\mathbb{R})^2$	155
5.4. Fourier transform of solutions	158
5.5. Inverse scattering	162
CHAPTER 6 : APPLICATIONS OF THE INVERSE SCATTERING TRANSFORMATION	
	167
6.1. The nonlinear Schrödinger equation	168
6.2. Isospectral potentials for nondegenerate first order systems using an alternative approach	174
6.3. Some evolution equations for isospectral potentials by ad hoc procedures	177
6.4. The general AKNS evolution equations	181
6.5. Degenerate first order scattering systems and the Sine-Gordon equation	187
6.6. Higher order scattering systems	192
CHAPTER 7 : PERTURBATIONS	
	195
7.1. Introduction and general formulation	195
7.2. Evolution of the scattering data in the case of the Schrödinger equation	198
7.2.1. The discrete eigenvalues and the reflection coefficient	198
7.2.2. The normalization coefficient	200
7.3. Evolution of the scattering data in the case of the generalized Zakharov-Shabat problem	203
7.3.1. The discrete eigenvalues and the reflection coefficient	205
7.3.2. The normalization coefficient	207
7.4. Perturbation analysis	209
