

Table of Contents

Chapter I. Background Material on Riemann Surfaces	1
§ 1. Riemann Surfaces	1
1.1 Definition of a Riemann surface	1
1.2 Bordered Riemann surfaces	2
1.3 The mirror image of a Riemann surface, the double of a bordered Riemann surface	2
1.4 Holomorphic mappings	2
§ 2. Jordan Curves on Riemann Surfaces	3
2.1 The fundamental group, covering surfaces	3
2.2 Annular covering surfaces	4
2.3 The annular covering surface induced by a Jordan curve	5
2.4 Jordan curves homotopic to a point	6
2.5 Disjoint, freely homotopic Jordan curves	6
2.6 Admissible systems of Jordan curves	8
§ 3. Ring Domains on Riemann Surfaces	9
3.1 Preliminaries	9
3.2 The reduced modulus	10
3.3 Analytic mappings of a punctured disk into a Riemann surface	11
3.4 The case $\tilde{M}(\gamma) = \infty$	13
3.5 Sequences of ring domains	14
3.6 Sequences of punctured disks	15
Chapter II. Quadratic Differentials	16
§ 4. Definition of a Quadratic Differential	16
Introduction	16
4.1 Definition	17
4.2 Regular points, critical points	18
4.3 The lift of a quadratic differential	18
4.4 Reflection to the double	19
4.5 Examples	19
§ 5. The Function $\Phi(P) = \int \sqrt{\varphi(z)} dz$	20
5.1 Distinguished parameter near regular points	20
5.2 Maximal φ -disks	21
5.3 The metric associated with a quadratic differential	22
5.4 Shortest curves in the neighborhood of a regular point	24
5.5 Geodesics. Trajectories	24

Chapter III. Local Behaviour of the Trajectories and the φ-Metric	27
Introduction	27
§6. Distinguished Parameter Near Critical Points	27
6.1 Critical points of odd order	27
6.2 Zeroes of even order	29
6.3 Poles of order two	29
6.4 Poles of even order ≥ 4	30
§7. Trajectory Structure Near Critical Points	31
7.1 Finite critical points	31
7.2 Poles of order two	32
7.3 Poles of order ≥ 3 without logarithmic term	33
7.4 Poles of even order ≥ 4	33
§8. The φ -Metric Near Finite Critical Points	34
8.1 Shortest curves near a zero of φ	34
8.2 Shortest curves in the neighborhood of a first order pole	36
Chapter IV. Trajectory Structure in the Large	38
§9. Closed Trajectories	38
9.1 The representation of the trajectories by Φ^{-1}	38
9.2 Closed trajectories	39
9.3 Embedding of a closed trajectory in a ring domain	39
9.4 The associated largest ring domain	40
9.5 The punctured disk and the doubly punctured sphere	42
9.6 Freely homotopic closed trajectories	42
§10. Non Closed Trajectories	43
10.1 Preliminaries	43
10.2 The limit set of a trajectory ray	43
10.3 Half planes and horizontal strips	46
10.4 Half planes in the neighborhood of a pole of order ≥ 3	47
10.5 Horizontal strips	48
§11. Compact Surfaces	48
11.1 Divergent rays on compact surfaces	48
11.2 The limit set of a recurrent ray	50
11.3 Partitioning of A into horizontal rectangles	52
11.4 The global trajectory structure on a compact surface	53
§12. Examples	54
12.1 Holomorphic quadratic differentials on the torus	54
12.2 Meromorphic quadratic differentials of finite norm on the Riemann sphere	55
12.3 Welding of surfaces	56
12.4 Interval exchange transformations	58
§13. Quadratic Differentials with Finite Norm	60
13.1 Exceptional trajectories	61
13.2 The φ -area of a general horizontal strip	62
13.3 Trajectories with a non recurrent ray of infinite length	62
13.4 Trajectories with a recurrent ray and a boundary ray	64
13.5 Strips of horizontal cross cuts of finite length	66
13.6 Spiral sets	67

Chapter V. The Metric Associated with a Quadratic Differential	70
Introduction	70
§ 14. Uniqueness of Geodesics	70
14.1 Teichmüller's lemma	70
14.2 Uniqueness of geodesic arcs	72
14.3 Uniqueness of closed geodesics	73
§ 15. Domains of Connectivity ≤ 3	74
15.1 Geodesic arcs in simply connected domains	74
15.2 Exclusion of recurrent trajectory rays	74
§ 16. Minimum Length Property of Geodesic Arcs	75
16.1 Minimal length in simply connected domains	75
16.2 Minimum length property on Riemann surfaces	77
16.3 The divergence principle	77
16.4 Generalization of the divergence principle	78
§ 17. Minimal Length of Closed Geodesics	79
17.1 Closed geodesics in an annulus	79
17.2 Geometric proof of minimal length	80
17.3 Generalization to step curves	81
17.4 Minimal length of closed geodesics on Riemann surfaces	82
§ 18. Existence of Geodesics	82
18.1 The basic existence theorem. Relatively shortest connection	82
18.2 Existence of a shortest connection	83
18.3 Minimal length of geodesic arcs	84
18.4 Existence of closed geodesics on compact Riemann surfaces	84
§ 19. Holomorphic Quadratic Differentials of Finite Norm in the Disk	85
19.1 Horizontal strips	85
19.2 Coverings of G by horizontal strips	86
19.3 The φ -length and the Euclidean length of the trajectories	88
19.4 The boundary behaviour of the trajectories	88
19.5 The length inequality for cross cuts	90
19.6 The boundary behaviour of the trajectories (continued)	91
19.7 Quadratic differentials in the disk, arising from quadratic differentials of finite norm on a Riemann surface	93
19.8 Generalization	94
19.9 The isoperimetric inequality	95
Chapter VI. Quadratic Differentials with Closed Trajectories	99
§ 20. Extremal Properties and Uniqueness Properties	99
Introduction	99
20.1 Definition of a quadratic differential with closed trajectories	100
20.2 Ring domains of a given homotopy type	100
20.3 Extremality of the φ -metric	101
20.4 Weighted sum of moduli	103
20.5 Weighted sum of the reciprocals of moduli	105
20.6 A minimax property of moduli	106

§ 21. Existence Theorems for Finite Curve Systems	107
21.1 Existence for given heights of the cylinders	107
21.2 A compactness property	111
21.3 The homeomorphism $(b_1, \dots, b_p) \rightarrow \varphi$	113
21.4 Exhaustion	114
21.5 An existence proof based on the compact case	116
21.6 The surface of the squares of the heights	117
21.7 Solution of the moduli problem	119
21.8 Solution of the moduli problem by exhaustion	121
21.9 The surface of moduli	122
21.10 Maximal weighted sum of moduli	125
21.11 Direct solution of the problem by variational methods	127
21.12 Solution by exhaustion	129
21.13 The generalized extremal length problem	131
21.14 The surface of the reciprocals of the moduli	132
§ 22. Existence Theorems for Infinite Curve Systems	133
22.1 Quadratic differentials with given heights of the cylinders	133
22.2 Existence proof by adding up the curves	136
22.3 Weighted sum of moduli: Maximal system of ring domains	137
22.4 Exhaustion of the curve system	138
22.5 The extremal metric in the general case	140
§ 23. Quadratic Differentials with Second Order Poles	141
23.1 Extremal properties	141
23.2 Solution of the moduli problem for reduced moduli	144
23.3 The set $\Gamma(P_1, \dots, P_p)$	145
23.4 The surface of reduced moduli	148
23.5 Quadratic differentials with given lengths of the trajectories	150
Chapter VII. Quadratic Differentials of General Type	151
§ 24. An Extremal Property for Arbitrary Quadratic Differentials	151
24.1 The height of a loop or a cross cut	151
24.2 The extremal property on compact surfaces with punctures	154
24.3 The extremal property on compact bordered surfaces with punctures	157
24.4 Parabolic surfaces	158
24.5 The extremal property on parabolic surfaces	159
24.6 The heights theorem	161
24.7 Continuity of the heights	161
§ 25. Approximation by Quadratic Differentials with Closed Trajectories	165
Introduction	165
25.1 Quadratic differentials with a spiral which is dense on R	166
25.2 Approximation on compact surfaces with punctures	167
25.3 Approximation by simple differentials	171
25.4 Intersection numbers	173
25.5 The mapping by heights	174
25.6 A second proof of the approximation by simple differentials	176
