Preface	xiii
Chapter 1. Introduction to Liquid Crystals	1
1.1. Molecular Structures and Chemical Compositions	1
1.1.1. Chemical Structures	1
1.2. Electronic Properties	3
1.2.1. Electronic Transitions and Ultraviolet Absorption	3
1.2.2. Visible and Infrared Absorption	4
1.3. Lyotropic, Polymeric, and Thermotropic Liquid Crystals	6
1.3.1. Lyotropic Liquid Crystals	6
1.3.2. Polymeric Liquid Crystals	6
1.3.3. Thermotropic Liquid Crystals: Nematics, Cholesterics, and Smectics	7
1.3.4. Other Liquid Crystalline Phases and Molecular Engineered Structures	10
1.4. Mixtures and Composites	11
1.4.1. Mixtures	12
1.4.2. Dye-Doped Liquid Crystals	13
1.4.3. Polymer-Dispersed Liquid Crystals	14
1.5. Liquid Crystal Cells and Sample Preparation	14
1.5.1. Bulk Thin Film	15
1.5.2. Liquid Crystal Optical Slab Waveguide, Fiber, and Nanostructured Photonic Crystals	17
References	19
Chapter 2. Order Parameter, Phase Transition, and Free Energies	22
2.1. Basic Concepts	22
2.1.1. Introduction	22
2.1.2. Scalar and Tensor Order Parameters	23
2.1.3. Long- and Short-Range Order	25
2.2. Molecular Interactions and Phase Transitions	26
2.3. Molecular Theories and Results for the Liquid Crystalline Phase	26
2.3.1. Maier-Saupe Theory: Order Parameter Near T_c	27
2.3.2. Nonequilibrium and Dynamical Dependence of the Order Parameter	29

2.4.	Isotropic Phase of Liquid Crystals	32
2.4.1.	Free Energy and Phase Transition	32
2.4.2.	Free Energy in the Presence of an Applied Field	33
	References	35
Chapter 3. Nematic Liquid Crystals		36
3.1.	Introduction	36
3.2.	Elastic Continuum Theory	36
3.2.1.	The Vector Field: Direct Axis $\hat{n}(\vec{r})$	36
3.2.2.	Elastic Constants, Free Energies, and Molecular Fields	38
3.3.	Dielectric Constants and Refractive Indices	41
3.3.1.	dc and Low-Frequency Dielectric Permittivity, Conductivities, and Magnetic Susceptibility	41
3.3.2.	Free Energy and Torques by Electric and Magnetic Fields	44
3.4.	Optical Dielectric Constants and Refractive Indices	45
3.4.1.	Linear Susceptibility and Local Field Effect	45
3.4.2.	Equilibrium Temperature and Order Parameter Dependences of Refractive Indices	47
3.5.	Flows and Hydrodynamics	51
3.5.1.	Hydrodynamics of Ordinary Isotropic Fluids	52
3.5.2.	General Stress Tensor for Nematic Liquid Crystals	55
3.5.3.	Flows with Fixed Director Axis Orientation	55
3.5.4.	Flows with Director Axis Reorientation	57
3.6.	Field-Induced Director Axis Reorientation Effects	58
3.6.1.	Field-Induced Reorientation without Flow Coupling: Freedericksz Transition	58
3.6.2.	Reorientation with Flow Coupling	61
	References	62
Chapter 4. Cholesteric, Smectic, and Ferroelectric Liquid Crystals		64
4.1.	Cholesteric Liquid Crystals	64
4.1.1.	Free Energies	64
4.1.2.	Field-Induced Effects and Dynamics	66
4.1.3.	Twist and Conic Mode Relaxation Times	69
4.2.	Light Scattering in Cholesterics	70
4.2.1.	General Optical Propagation and Reflection: Normal Incidence	70
4.2.2.	Cholesteric Liquid Crystal as a One-Dimensional Photonic Crystal	74
4.2.3.	Cholesteric Liquid Crystals with Magneto-Optic Activity: Negative Refraction Effect	78

4.3.	Smectic and Ferroelectric Liquid Crystals: A Quick Survey	80
4.4.	Smectic-A Liquid Crystals	82
4.4.1.	Free Energy	82
4.4.2.	Light Scattering in SmA Liquid Crystals	84
4.5.	Smectic-C Liquid Crystals	86
4.5.1.	Free Energy	86
4.5.2.	Field-Induced Director Axis Rotation in SmC Liquid Crystals	87
4.6.	Smectic-C* and Ferroelectric Liquid Crystals	88
4.6.1.	Free Energy of Ferroelectric Liquid Crystals	89
4.6.2.	Smectic-C*–Smectic-A Phase Transition	93
	References	95
Chapter 5. Light Scatterings		97
5.1.	Introduction	97
5.2.	General Electromagnetic Formalism of Light Scattering in Liquid Crystals	98
5.3.	Scattering from Director Axis Fluctuations in Nematic Liquid Crystals	100
5.4.	Light Scattering in the Isotropic Phase of Liquid Crystals	104
5.5.	Temperature, Wavelength, and Cell Geometry Effects on Scattering	107
5.6.	Spectrum of Light and Orientation Fluctuation Dynamics	109
5.7.	Raman Scatterings	111
5.7.1.	Introduction	111
5.7.2.	Quantum Theory of Raman Scattering: Scattering Cross Section	112
5.8.	Brillouin and Rayleigh Scatterings	115
5.8.1.	Brillouin Scattering	117
5.8.2.	Rayleigh Scattering	119
5.9.	Nonlinear Light Scattering: Supraoptical Nonlinearity of Liquid Crystals	120
	References	122
Chapter 6. Liquid Crystal Optics and Electro-Optics		124
6.1.	Introduction	124
6.2.	Review of Electro-Optics of Anisotropic and Birefringent Crystals	125
6.2.1.	Anisotropic, Uniaxial, and Biaxial Optical Crystals	125
6.2.2.	Index Ellipsoid in the Presence of an Electric Field: Linear Electro-Optics Effect	127
6.2.3.	Polarizers and Retardation Plate	128
6.2.4.	Basic Electro-Optics Modulation	130

6.3.	Electro-Optics of Nematic Liquid Crystals	131
6.3.1.	Director Axis Reorientation in Homeotropic and Planar Cells: Dual-Frequency Liquid Crystals	131
6.3.2.	Freedericksz Transition Revisited	133
6.3.3.	Field-Induced Refractive Index Change and Phase Shift	136
6.4.	Nematic Liquid Crystal Switches and Displays	138
6.4.1.	Liquid Crystal Switch: On-Axis Consideration for Twist, Planar, and Homeotropic Aligned Cells	139
6.4.2.	Off-Axis Transmission, Viewing Angle, and Birefringence Compensation	139
6.4.3.	Liquid Crystal Display Electronics	141
6.5.	Electro-Optical Effects in Other Phases of Liquid Crystals	142
6.5.1.	Surface Stabilized FLC	142
6.5.2.	Soft-Mode FLCs	144
6.6.	Nondisplay Applications of Liquid Crystals	146
6.6.1.	Liquid Crystal Spatial Light Modulator	146
6.6.2.	Tunable Photonic Crystals with Liquid Crystal Infiltrated Nanostructures	148
6.6.3.	Tunable Frequency Selective Planar Structures	148
6.6.4.	Liquid Crystals for Molecular Sensing and Detection	150
6.6.5.	Beam Steering, Routing, and Optical Switching and Laser Hardened Optics	152
	References	153
Chapter 7. Electromagnetic Formalisms for Optical Propagation		157
7.1.	Introduction	157
7.2.	Electromagnetism of Anisotropic Media Revisited	158
7.2.1.	Maxwell Equations and Wave Equations	158
7.2.2.	Complex Refractive Index	159
7.2.3.	Negative Index Material	160
7.2.4.	Normal Modes, Power Flow, and Propagation Vectors in a Lossless Isotropic Medium	163
7.2.5.	Normal Modes and Propagation Vectors in a Lossless Anisotropic Medium	164
7.3.	General Formalisms for Polarized Light Propagation Through Liquid Crystal Devices	168
7.3.1.	Plane-Polarized Wave and Jones Vectors	169
7.3.2.	Jones Matrix Method for Propagation Through a Nematic Liquid Crystal Cell	173
7.3.3.	Oblique Incidence: 4×4 Matrix Methods	175
7.4.	Extended Jones Matrix Method	177

7.5.	Finite-Difference Time-Domain Technique	181
7.5.1.	The Implementation of FDTD Methods	181
7.5.2.	Example: FDTD Computations of the Twisted Nematic Cell in One Dimension	186
	References	188
Chapter 8. Laser-Induced Orientational Optical Nonlinearities in Liquid Crystals		190
8.1.	General Overview of Liquid Crystal Nonlinearities	190
8.2.	Laser-Induced Molecular Reorientations in the Isotropic Phase	193
8.2.1.	Individual Molecular Reorientations in Anisotropic Liquids	193
8.2.2.	Correlated Molecular Reorientation Dynamics	196
8.2.3.	Influence of Molecular Structure on Isotropic Phase Reorientational Nonlinearities	198
8.3.	Molecular Reorientations in the Nematic Phase	200
8.3.1.	Simplified Treatment of Optical Field-Induced Director Axis Reorientation	201
8.3.2.	More Exact Treatment of Optical Field-Induced Director Axis Reorientation	204
8.3.3.	Nonlocal Effect and Transverse Dependence	205
8.4.	Nematic Phase Reorientation Dynamics	206
8.4.1.	Plane Wave Optical Field	206
8.4.2.	Sinusoidal Optical Intensity	210
8.5.	Laser-Induced Dopant-Assisted Molecular Reorientation and Trans-Cis Isomerism	211
8.6.	DC Field Aided Optically Induced Nonlinear Optical Effects in Liquid Crystals: Photorefractivity	213
8.6.1.	Orientational Photorefractivity: Bulk Effects	215
8.6.2.	Some Experimental Results and Surface Charge/Field Contribution	220
8.7.	Reorientation and Nonelectronic Nonlinear Optical Effects in Smectic and Cholesteric Phases	221
8.7.1.	Smectic Phase	221
8.7.2.	Cholesteric Phase	222
	References	223
Chapter 9. Thermal, Density, and Other Nonelectronic Nonlinear Mechanisms		227
9.1.	Introduction	227
9.2.	Density and Temperature Changes Induced by Sinusoidal Optical Intensity	230
9.3.	Refractive Index Changes: Temperature and Density Effects	233

9.4.	Thermal and Density Optical Nonlinearities of Nematic Liquid Crystals in the Visible-Infrared Spectrum	238
9.4.1.	Steady-State Thermal Nonlinearity of Nematic Liquid Crystals	240
9.4.2.	Short Laser Pulse Induced Thermal Index Change in Nematics and Near- T_c Effect	241
9.5.	Thermal and Density Optical Nonlinearities of Isotropic Liquid Crystals	243
9.6.	Coupled Nonlinear Optical Effects in Nematic Liquid Crystals	245
9.6.1.	Thermal-Orientational Coupling in Nematic Liquid Crystals	246
9.6.2.	Flow-Orientational Effect	247
	References	251
Chapter 10. Electronic Optical Nonlinearities		253
10.1.	Introduction	253
10.2.	Density Matrix Formalism for Optically Induced Molecular Electronic Polarizabilities	253
10.2.1.	Induced Polarizations	256
10.2.2.	Multiphoton Absorptions	256
10.3.	Electronic Susceptibilities of Liquid Crystals	259
10.3.1.	Linear Optical Polarizabilities of a Molecule with No Permanent Dipole	259
10.3.2.	Second-Order Electronic Polarizabilities	262
10.3.3.	Third-Order Electronic Polarizabilities	264
10.4.	Electronic Nonlinear Polarizations of Liquid Crystals	266
10.4.1.	Local Field Effects and Symmetry	267
10.4.2.	Symmetry Considerations	268
10.4.3.	Permanent Dipole and Molecular Ordering	268
10.4.4.	Quadrupole Contribution and Field-Induced Symmetry Breaking	269
10.4.5.	Molecular Structural Dependence of Nonlinear Susceptibilities	269
	References	271
Chapter 11. Introduction to Nonlinear Optics		273
11.1.	Nonlinear Susceptibility and Intensity-Dependent Refractive Index	273
11.1.1.	Nonlinear Polarization and Refractive Index	273
11.1.2.	Nonlinear Coefficient and Units	276
11.2.	General Nonlinear Polarization and Susceptibility	277
11.3.	Convention and Symmetry	278
11.4.	Coupled Maxwell Wave Equations	282

11.5.	Nonlinear Optical Phenomena	284
11.5.1.	Stationary Degenerate Four-Wave Mixing	284
11.5.2.	Optical Phase Conjugation	288
11.5.3.	Nearly Degenerate and Transient Wave Mixing	291
11.5.4.	Nondegenerate Optical Wave Mixing: Harmonic Generations	294
11.5.5.	Self-Focusing and Self-Phase Modulation	297
11.6.	Stimulated Scatterings	303
11.6.1.	Stimulated Raman Scatterings	303
11.6.2.	Stimulated Brillouin Scatterings	306
11.6.3.	Stimulated Orientational Scattering in Liquid Crystals	311
11.6.4.	Stimulated Thermal Scattering (STS)	316
	References	317
Chapter 12. Nonlinear Optical Phenomena Observed in Liquid Crystals		319
12.1.	Self-Focusing, Self-Phase Modulation, and Self-Guiding	319
12.1.1.	Self-Focusing and Self-Phase Modulation and cw Optical Limiting with Nematic Liquid Crystals	319
12.1.2.	Self-Guiding, Spatial Soliton, and Pattern Formation	324
12.2.	Optical Wave Mixing	326
12.2.1.	Stimulated Orientational Scattering and Polarization Self-Switching: Steady State	326
12.2.2.	Stimulated Orientational Scattering: Nonlinear Dynamics	329
12.2.3.	Optical Phase Conjugation with Orientation and Thermal Gratings	332
12.2.4.	Self-Starting Optical Phase Conjugation	333
12.3.	Liquid Crystals for All-Optical Image Processing	337
12.3.1.	Liquid Crystals as All-Optical Information Processing Materials	337
12.3.2.	All-Optical Image Processing	339
12.3.3.	Intelligent Optical Processing	341
12.4.	Harmonic Generations and Sum-Frequency Spectroscopy	343
12.5.	Optical Switching	344
12.6.	Nonlinear Absorption and Optical Limiting of Short Laser Pulses in Isotropic Phase Liquid Crystals and Liquids	348
12.6.1.	Introduction	348
12.6.2.	Nonlinear Fiber Array	350
12.6.3.	RSA Materials (C60 Doped ILC)	351
12.6.4.	Optical Limiting by TPA Materials (L34 Fiber Core Liquid)	355
12.7.	Conclusion	358
	References	358
	Index	365
