Foreword	IX
Foreword (vol. 1)	XI
Sponsors	XIII
<i>Lifetime prediction</i>	
Theoretical and numerical limitations for the simulation of crack propagation in natural rubber components	03
<i>P. Charrier, E. Ostoja-Kuczynski, E. Verron, G. Marckmann, L. Gornet & G. Chagnon</i>	
Simulation of crack propagation in rubber	11
<i>C. Timbrell, M. Wiehahn, G. Cook & A.H. Muhr</i>	
A method for determining equi-biaxial fatigue in elastomers	21
<i>N. Murphy, C. Spratt, S. Ronan, S. Jerrams & R. Johannknecht</i>	
A methodology for test time reduction in rubber part testing	27
<i>T. Steinweger, M. Flamm & U. Weltin</i>	
Predicting cyclic fatigue crack growth using finite element analysis techniques applied to three-dimensional elastomeric components	33
<i>I.C. Papadopoulos, H. Liang, J.J.C. Busfield & A.G. Thomas</i>	
Crack initiation in filled natural rubber: experimental database and macroscopic observations	41
<i>E. Ostoja-Kuczynski, P. Charrier, E. Verron, G. Marckmann, L. Gornet & G. Chagnon</i>	
Lifetime prediction of multiaxially loaded rubber springs and bushings	49
<i>M. Flamm, T. Steinweger & U. Weltin</i>	
Fatigue life prediction and verification of rubber to metal bonded springs	55
<i>R.K. Luo, P.W. Cook, W.X. Wu & W.J. Mortel</i>	
A finite element methodology to predict age-related mechanical properties and performance changes in rubber components	59
<i>M. Achenbach & J. Duarte</i>	
<i>Ageing</i>	
Study on the dynamic mechanical properties of aged rubbers	71
<i>Y.T. Wei, L. Nasdala, H. Rothert & Z.M. Xie</i>	
Effect of ageing on the ability of natural rubber to strain crystallise	79
<i>A.R. Azura, D. Göritz, A.H. Muhr & A.G. Thomas</i>	
Homogenisation techniques for the analysis of oxygen diffusion and reaction in fiber-reinforced elastomers	85
<i>L. Nasdala, Y. Wei & H. Rothert</i>	
<i>Applications</i>	
Elastic instabilities in rubber: aneurysms, wrinkles and knots	95
<i>A.N. Gent</i>	

Uniaxial and equi-biaxial tension tests of silicone elastomer <i>P. Meier, S. Khader, R. Preuß, J. Dietrich & D. Voges</i>	99
A computation model to predict the thermomechanical behavior of automobile tires <i>H.T. Yuksel & S. Karadeniz</i>	107
Application of non-linear FEA to tyre rolling resistance simulation <i>K. Akutagawa, M. Koide & H. Heguri</i>	115
Modelling of structural inhomogeneities by a homogenized approach <i>M. Kaliske, M. André & A. Rieger</i>	119
Constitutive sensitivity of end effects in slabs under compression <i>B. Karp</i>	125
Finite element analysis of a rubber bushing considering rate and amplitude dependent effects <i>A.K. Olsson & P-E. Austrell</i>	133
Prediction of tyre rolling resistance using FEA <i>P. Ghosh, A. Saha & R. Mukhopadhyay</i>	141
Engineering design of rubber pads ageing properties: theory and experiment <i>M.A. Dashevskij, V.V. Motorin, E.M. Mironov & T.G. Samojlenko</i>	147
 <i>Hyperelastic models</i>	
A general first-invariant hyperelastic constitutive model <i>R.S. Marlow</i>	157
Critical comparison of popular hyper-elastic material models in design of anti-vibration mounts for automotive industry through FEA <i>S. Sharma</i>	161
A finite element formulation for the stress rate in hyperelasticity based on the Updated Lagrangian approach and its applicability to vibration control devices <i>A. Matsuda, O. Watanabe & R. de Borst</i>	169
Influence of the filler properties on the mechanical response of silica filled natural rubber <i>A. Bennani, L. Laiarinandrasana, R. Piques & S. Cantournet</i>	177
Advanced computational modelling of the mechanical behaviour of rubber-like materials <i>Z. Guo, L.J. Shuys, P. Stroeven & Ch.F. Hendriks</i>	185
 <i>Statistical approach to networks</i>	
The effect of spatially inhomogeneous mixing of polymer and cross-links for end-linked polymer networks <i>M. Lang, D. Göritz & S. Kreitmeier</i>	195
Finite element modelling of polymer networks based on chain statistics <i>M. Böl & S. Reese</i>	203
On a micromechanically-based finite element simulation of the viscoelastic and damage behaviour of rubber-like polymers <i>S. Reese & M. Böl</i>	213
 <i>Stress softening</i>	
Modelling of stress softening in filled elastomers <i>K. Bose, J.A. Hurtado, M.F. Snyman, W.V. Mars & J.Q. Chen</i>	223
Time dependencies in the response of self-organizing linkage patterns to imposed deformation <i>J. Ihlemann</i>	231

Modelling the Mullins effect using damage mechanics: efficiency and limitations <i>E. Verron, G. Chagnon, L. Gornet, G. Marckmann & P. Charrier</i>	237
Comparison of recent models for the Mullins effect: formulation and finite element implementation <i>G. Chagnon, E. Verron, G. Marckmann, L. Gornet & P. Charrier</i>	245
 <i>Modelling compressibility and dilational effects</i>	
Modelling dilatational stress softening of rubber <i>A. Dorfmann, K.N.G. Fuller & R.W. Ogden</i>	253
A constitutive model for nonlinear viscoelastic particulate composite materials <i>M.E. Canga, Ş. Özüpek & E.B. Becker</i>	263
Compressibility induced by damage in carbon black reinforced natural rubber <i>K. Layouni, L. Laiarinandrasana & R. Piques</i>	273
Effect of compressible filler on the elastic properties of rubber <i>J. Gough, A.H. Muhr & A.G. Thomas</i>	283
Thermodynamic analysis of polymer networks <i>D. Göritz & O.T. Hafner</i>	291
 <i>Dynamic properties, filler reinforcement and the Fletcher-Gent effect</i>	
Filler reinforcement in rubber carbon black systems <i>A.A. Hon, J.J.C. Busfield & A.G. Thomas</i>	301
Modelling inelastic stress–strain phenomena and a scheme for efficient experimental characterization <i>D. Besdo, J. Ihlemann, J.G.R. Kingston & A.H. Muhr</i>	309
Material model and experimental testing of rubber components under cyclic deformation <i>M. Rabkin, T. Brüger & P. Hinsch</i>	319
Network junction model for mechanical properties of filled vulcanizates <i>G.B. Ouyang</i>	325
Impact of pre-strain on dynamic-mechanical properties of carbon black and silica filled rubbers <i>M. Klüppel, J. Meier & G. Heinrich</i>	333
The effect of swelling and temperature on the electrical and mechanical behaviour of a filled rubber <i>K. Yamaguchi, J.J.C. Busfield & A.G. Thomas</i>	343
Force-deformation behaviour of filled and unfilled elastomers down to very small strains <i>V.A. Coveney, S. Jamil & D.E. Johnson</i>	349
Interpretation of the high low-strain modulus of filled rubbers as an inelastic effect <i>H.R. Ahmadi, J.G.R. Kingston, A.H. Muhr, L.A. Gracia & B. Gómez</i>	357
Dynamic analysis of rubber to metal devices using an unconventional numerical modelling for elastomers <i>A. Magalini, D. Vetturi, G. Ramorino, A. Saleri & F. Viganò</i>	365
Phenomenological models for the mechanical behaviour of filled elastomers under “steady” conditions <i>V.A. Coveney, S. Jamil & D.E. Johnson</i>	373
Dynamic mechanical behaviour of filled and unfilled elastomers under uniaxial and multi-axial conditions <i>V.A. Coveney, S. Jamil & D.E. Johnson</i>	381
A micro-mechanical mechanism for energy dissipation of filled rubber <i>Z. Xie, Y.T. Wei & X.W. Du</i>	387

The effects of cyclic pre-loading and thermal recovery on the viscoelastic response of carbon black-reinforced rubbers <i>A.D. Drozdov & A. Dorfmann</i>	391
Constitutive modelling of calendering induced anisotropy in rubber sheets <i>M. Itskov, N. Aksel & A. Ehret</i>	401
<i>Magneto- and electro-sensitive rubbers</i>	
Magneto-rheological rubber to reduce noise: reality or fiction? – An experimental inquiry into its effectiveness <i>L. Kari</i>	407
Semi-active vibroisolation using elastomer electro-rheological and viscoelastic materials <i>L.M. Hadjiov, A.B. Kazakoff, Ya. Ivanov, I. Paskaleva, M. Dashevsky & E. Mironov</i>	411
Modelling of magneto-sensitive elastomers <i>A. Dorfmann & I.A. Brigadnov</i>	421
Author index	429
Subject index	431
