

Contents

Preface	xix
Introduction	1
1 The Methods of Time-Series Analysis	3
Polynomial Methods	21
2 Elements of Polynomial Algebra	23
3 Rational Functions and Complex Analysis	55
4 Polynomial Computations	89
5 Difference Equations and Differential Equations	121
6 Vector Difference Equations and State-Space Models	161
Least-Squares Methods	179
7 Matrix Computations	181
8 Classical Regression Analysis	201
9 Recursive Least-Squares Estimation	227
10 Estimation of Polynomial Trends	261
11 Smoothing with Cubic Splines	293
12 Unconstrained Optimisation	323
Fourier Methods	363
13 Fourier Series and Fourier Integrals	365
14 The Discrete Fourier Transform	399
15 The Fast Fourier Transform	427

Time-Series Models	457
16 Linear Filters	459
17 Autoregressive and Moving-Average Processes	513
18 Time-Series Analysis in the Frequency Domain	549
19 Prediction and Signal Extraction	575
 Time-Series Estimation	 617
20 Estimation of the Mean and the Autocovariances	619
21 Least-Squares Methods of ARMA Estimation	637
22 Maximum-Likelihood Methods of ARMA Estimation	667
23 Nonparametric Estimation of the Spectral Density Function	697
Index	721

A complete bibliography can be found on the CD-Rom
