Preface	xiii
Chapter 1 Introduction to Large-Scale Systems	1
1.1 Historical Background	1
1.2 Hierarchical Structures	2
1.3 Decentralized Control	3
1.4 Scope	5
Problems	5
References	6
Chapter 2 Large-Scale Systems Modeling: Time Domain	7
2.1 Introduction	7
2.2 Aggregation Methods	10
2.2.1 Exact and Modal Aggregation	12
2.2.2 Aggregation by Continued Fraction	19
2.2.3 Chained Aggregation	23
2.3 Perturbation Methods	30
2.3.1 Weakly Coupled Models	31
2.3.2 Strongly Coupled Models	37
2.3.2.a Boundary Layer Correction	39
2.3.2.b Time-Scale Separation	40
2.3.2.c Multimodeling	46
2.4 Descriptive Variable Approach	47
2.4.1 Descriptor Variable System	48
2.4.2 Solvability and Conditionability	50
2.4.3 Time Invariance	52
2.4.4 Shuffle Algorithm	53
2.5 Discussion and Conclusions	54
Problems	57
References	61

Chapter 3 Large-Scale Systems Modeling: Frequency Domain	66
3.1 Introduction	66
3.2 Moment Matching	67
3.3 Padé Approximation	72
3.4 Routh Approximation	75
3.5 Continued Fraction Method	79
3.6 Error Minimization Methods	82
3.7 Mixed Methods and Unstable Systems	85
3.7.1 Padé–Modal Method	86
3.7.2 Padé–Routh Method	86
3.8 Multiinput–Multioutput Systems Reduction	88
3.8.1 Matrix Continued Fraction Method	88
3.8.2 Modal–Continued Fraction Method	89
3.8.3 Padé–Modal Method	90
3.9 Frequency Response Comparisons	92
3.10 Discussion and Conclusions	98
Problems	99
References	100
Chapter 4 Hierarchical Control of Large-Scale Systems	103
4.1 Introduction	103
4.2 Coordination of Hierarchical Structures	106
4.2.1 Model Coordination Method	107
4.2.2 Goal Coordination Method	108
4.3 Open-Loop Hierarchical Control of Continuous–Time Systems	110
4.3.1 Linear System Two-Level Coordination	111
4.3.2 Interaction Prediction Method	119
4.3.3 Goal Coordination and Singularities	127
4.3.3.a Reformulation 1	129
4.3.3.b Reformulation 2	130
4.4 Closed-Loop Hierarchical Control of Continuous-Time Systems	132
4.4.1 Closed-Loop Control via Interaction Prediction	132
4.4.2 Closed-Loop Control via Structural Perturbation	136
4.5 Hierarchical Control of Discrete-Time Systems	147
4.5.1 Three-Level Coordination for Discrete-Time Systems	147
4.5.2 Discrete-Time Systems with Delays	153
4.5.2.a Problem $k = 0$	156
4.5.2.b Problem $k = 1, 2, \dots, K - 1$	157
4.5.2.c Problem $k = K$	157
4.5.3 Interaction Prediction Approach	158
4.5.4 Structural Perturbation Approach	163
4.5.5 Costate Prediction Approach	167
4.6 Discussion and Conclusions	177
Problems	180
References	184

Chapter 5 Decentralized Control of Large-Scale Systems	188
5.1 Introduction	188
5.2 Problems Formulation	189
5.2.1 Problem 1—Decentralized Stabilization	189
5.2.2 Problem 2—Decentralized Servomechanism	190
5.2.3 Problem 3—Decentralized Stochastic Control	191
5.3 Decentralized Stabilization	192
5.3.1 Fixed Polynomials and Fixed Modes	193
5.3.2 Stabilization via Dynamic Compensation	197
5.3.3 Stabilization via Local State Feedback	201
5.3.4 Stabilization via Multilevel Control	209
5.3.5 Exponential Stabilization	216
5.3.6 Stabilization via Dynamic Hierarchy	221
5.3.7 General Stabilization Through Local State Feedback	224
5.3.7.a Time-Varying Plant and Feedback Control	224
5.3.7.b Time-Invariant Plant and Feedback Control	227
5.3.7.c Time-Invariant Plant and Time-Varying Feedback Control	229
5.4 Decentralized Robust Control	232
5.4.1 Constraints and Definitions	233
5.4.1.a Tuning Control Synthesis Constraints	233
5.4.1.b Robust Decentralized Problem	233
5.4.2 Steady-State Tracking Gain Matrices and Their Evaluation	234
5.4.2.a Evaluation of $T_1(i, j)$	234
5.4.2.b Evaluation of $T_1(i, j, K_i)$	235
5.4.3 Existence of Decentralized Robust Controllers	237
5.4.4 Control Structure and Algorithms	244
5.4.5 Sequentially Stable Robust Controller	250
5.5 Decentralized Stochastic Control	256
5.5.1 A Nondecentralized Solution	256
5.5.2 A Decentralized Solution	258
5.5.3 Solution of Continuous-Time System	261
5.5.3.a Nondecentralized Case	262
5.5.3.b Decentralized Case	263
5.6 Discussion and Conclusions	264
Problems	268
References	270
 Chapter 6 Near-Optimum Design of Large-Scale Systems	 274
6.1 Introduction	274
6.2 Near-Optimum Control of Linear Time-Invariant Systems	275
6.2.1 Aggregation Methods	275
6.2.2 Perturbation Methods	282
6.2.2.a Regular Perturbation	282
6.2.2.b Singular Perturbation	288
6.2.2.c The Multi-Time-Scale Approach	297

6.2.3 Hierarchical and Decentralized Methods	300
6.2.3.a Optimal Decentralized Control via Unconstrained Minimization	303
6.2.3.b Decentralized Control via Sequential Optimization	306
6.3 Near-Optimum Control of Large-Scale Nonlinear Systems	309
6.3.1 Near-Optimum Control via Sensitivity Methods	309
6.3.2 Hierarchical Control via Interaction Prediction	316
6.3.3 Near-Optimum Control via Perturbation and Sensitivity Methods	327
6.3.3.a Imbedding Solution of a TPBV Problem	331
6.3.3.b An Application of the Perturbation Method	334
6.4 Near-Optimum Control of Large-Scale Time-Delay Systems	342
6.4.1 Near-Optimum Control of Coupled Time-Delay Systems	344
6.4.2 Near-Optimum Control of Serial Time-Delay Systems	356
6.4.3 Hierarchical Control of a Nonserial Time-Delay System	362
6.5 Bounds on Near-Optimum Cost Functional	370
6.5.1 Near-Optimality Due to Aggregation	371
6.5.2 Near-Optimality Due to Perturbation	373
6.5.3 Near-Optimality in Hierarchical Control	375
6.5.3.a Structural Perturbation	375
6.5.3.b Lagrange Duality	378
6.5.4 Near-Optimality in Time-Delay Systems	380
6.5.5 Near-Optimality in Nonlinear Systems	384
6.6 State Estimation in Large-Scale Systems	388
6.7 Discussion and Conclusions	402
Problems	404
References	406
Chapter 7 Structural Properties of Large-Scale Systems	413
7.1 Introduction	413
7.2 Lyapunov Stability Methods	415
7.2.1 Definitions and Problem Statement	416
7.2.2 Stability Criteria	419
7.2.3 Connective Stability	423
7.2.3.a System Structure and Perturbation	423
7.2.3.b A Connective Stability Criterion	426
7.3 Input–Output Stability Methods	430
7.3.1 Problem Development and Statement	431
7.3.2 IO Stability Criterion	434
7.4 Controllability and Observability of Composite Systems	435
7.4.1 Frequency Domain Approach	437
7.4.1.a Parallel–Series Systems	438
7.4.1.b Closed-Loop Composite Systems	440
7.4.2 Generalized Resultant Approach	442
7.4.3 System Connectability Approach	447
7.4.3.a Preliminary Definitions	448
7.4.3.b Controllability and Observability Conditions	452

7.5 Structural Controllability and Observability	453
7.5.1 Structure and Rank of a Matrix	454
7.5.2 Conditions for Structural Controllability	456
7.5.3 Structural Controllability and Observability via System Connectability	461
7.6 Controllability of Singularly Perturbed Systems	462
7.6.1 Controllability of Linear TIV Singularly Perturbed Systems	463
7.6.2 Controllability of Linear TV Singularly Perturbed Systems	464
7.6.3 Controllability of Quasilinear Systems	469
7.7 Discussion and Conclusions	472
7.7.1 Discussion of the Stability of Large-Scale Systems	472
7.7.2 Discussion of the Controllability and Observability of Large-Scale Systems	477
Problems	478
References	481
Solutions and Answers to Selected Problems	486
Author Index	509
Subject Index	515
