

## CONTENTS

Preface	V
<i>Part I. Basic Methods of Linear Programming</i>	
1. Introduction	
1.1. Linear Programming in Historical Perspective	3
1.2. Economic Decisions and Linear Programming	5
1.3. The Linear Programming Problem	7
1.4. Geometrical Representation of Linear Programming Problems	10
Exercises	15
2. The Simplex Method for Linear Programming	
2.1. Production Planning with One Resource Limitation	20
2.2. Production Planning with Two Resource Limitations	23
2.3. Production Planning Using the Simplex Method	28
2.4. A General Treatment of the Simplex Method	38
2.5. A Geometrical Interpretation of the Simplex Method	47
Exercises	49
3. Related Problems and Methods	
3.1. The Composition of Minimum-Cost Cattlefeed	57
3.2. The Use of Artificial Variables for an Initial Basic Feasible Solution	61
3.3. Nonrestricted Variables	65
3.4. The Outsider's Point of View or the Dual Problem	68
3.5. The Dual Method	76
3.6. Equality Constraints and the Dual Method	81
Exercises	84
4. Sensitivity Analysis and Near-Optimality Analysis	
4.1. Sensitivity Analysis of the Coefficients of the Objective Function	90
4.2. Sensitivity Analysis of the Constant Terms	94
4.3. Alternative Optimal Solutions	98

4.4. Near-Optimality Analysis via the Reverse Simplex Method	101
Exercises	105
5. Anti-Cycling and Upper-Bound Methods	
5.1. Degeneracy and the Anti-Cycling Method	110
5.2. The Simplex Method for Problems with Upper-Bound Constraints	114
5.3. An Application: Upper Bounds for Sales	120
Exercises	123
6. Parametric Programming	
6.1. Introduction	126
6.2. Programming with a Parametric Objective Function	128
6.3. Programming with Parametric Constant Terms	138
6.4. The Primal-Dual Method	148
Exercises	150
 <i>Part II. Applications of Linear Programming</i>	
7. Linear Programming Computations with a Computer System	
7.1. Introduction	159
7.2. Data Input	160
7.3. Control Program for APEX-III	163
7.4. Control Program for MPSX	164
7.5. Computer Output	166
7.6. Bounds and Ranges	169
7.7. Parametric Programming	172
Exercises	175
8. Formulation and Structure of Linear Programming Problems	
8.1. Intermediate Products in Production Planning	176
8.2. Economic Activities in Linear Programming	180
8.3. A Dynamic Production, Sales, and Inventory Model	183
Exercises	193
9. Some Applications of Linear Programming	
9.1. A Capital Budgeting Problem	199
9.2. A Simple Production, Inventory, and Financial Flow Model	204
9.3. Production Planning for a Dairy	211
Exercises	224

10. Linear Programming Models and Economic Analysis	
10.1. Activity Analysis and Economic Analysis	229
10.2. Equilibrium with Elastic Demand	231
10.3. Numerical Solution by Quadratic Programming	236
10.4. The Case of a Monopolist	242
Exercises	249
11. Game Theory	
11.1. Introduction	251
11.2. Example and Terminology	252
11.3. Graphic Solutions for Mixed Strategies	257
11.4. Game Theory and Linear Programming	260
Exercises	264
 <i>Part III. Transportation and Network Methods</i>	
12. Transportation Methods	
12.1. A Production and Sales Allocation Problem	271
12.2. The Classical Transportation Problem	284
12.3. The Dual Transportation Method	292
12.4. The Primal-Dual Transportation Method	298
Exercises	304
13. Variants of Transportation Models	
13.1. The Assignment Problem	313
13.2. Dynamic Production Planning	317
13.3. Upper Bounds in Transportation Methods	321
13.4. The Transshipment Problem	324
Exercises	330
14. Transportation Networks	
14.1. Network Representation of Transportation Problems	336
14.2. The Simplex Network Method	339
14.3. The Dual and the Primal-Dual Network Methods	343
14.4. Networks with Transshipments	346
14.5. Network Problems with Node Prices	354
14.6. Example of Crude Oil Distribution	360
Exercises	369

*Part IV. Decision Tree Methods*

15. Branch-and-Bound Methods	
15.1. Introduction	379
15.2. Decision Trees	381
15.3. Branch-and-Bound Methods for a Decision Tree	384
15.4. The Traveling Salesman Problem	389
Exercises	398
16. Branch-and-Bound Methods for Integer Programming	
16.1. The Fixed Charge Problem	401
16.2. The Zero-One Integer Problem	413
16.3. The General Integer Problem	417
16.4. Proof of Decreasing Values of $f$	422
Exercises	424
Bibliography	429
Solutions to Odd-Numbered Exercises	431
Index	437
