
Contents

Chapter 1	Continuous failure times and their causes	1
1.1	Basic probability functions.....	1
1.1.1	Univariate survival distributions.....	1
1.1.2	A time and a cause: Competing Risks.....	4
1.2	Some small data sets.....	6
1.3	Hazard functions	10
1.3.1	Sub-hazards and overall hazard	10
1.3.2	Proportional hazards	12
1.4	Regression models.....	13
1.4.1	Proportional hazards	15
1.4.2	Accelerated life	16
1.4.3	Proportional odds.....	16
1.4.4	Mean residual life.....	16
Chapter 2	Parametric likelihood inference	19
2.1	The likelihood for Competing Risks	19
2.1.1	Forms of the likelihood function.....	19
2.1.2	Incomplete observation of C or T	20
2.1.3	Maximum likelihood estimates.....	21
2.2	Model checking.....	22
2.2.1	Goodness of fit.....	22
2.2.2	Residuals.....	23
2.3	Inference	24
2.3.1	Hypothesis tests and confidence intervals.....	24
2.3.2	Bayesian approach	24
2.3.3	Bayesian computation	26
2.4	Some examples.....	27
2.5	Masked systems.....	34
Chapter 3	Latent failure times: probability distributions	37
3.1	Basic probability functions.....	37
3.1.1	Multivariate survival distributions	37
3.1.2	Latent lifetimes	38
3.2	Some examples.....	40
3.3	Marginal vs. sub-distributions	46

3.4	Independent risks	48
3.4.1	The Makeham assumption	50
3.4.2	Proportional hazards	51
3.4.3	Some examples	52
3.5	A risk-removal model	53
Chapter 4	Likelihood functions for univariate survival data	57
4.1	Discrete and continuous failure times	57
4.1.1	Discrete survival distributions	58
4.1.2	Mixed survival distributions	59
4.2	Discrete failure times: estimation	62
4.2.1	Random samples: parametric estimation	62
4.2.2	Random samples: non-parametric estimation	63
4.2.3	Explanatory variables	65
4.2.4	Interval-censored data	66
4.3	Continuous failure times: random samples	67
4.3.1	The Kaplan-Meier estimator	67
4.3.2	The integrated and cumulative hazard functions	68
4.4	Continuous failure times: explanatory variables	69
4.4.1	Cox's proportional hazards model	69
4.4.2	Cox's partial likelihood	70
4.4.3	The baseline survivor function	72
4.4.4	Residuals	73
4.4.5	Some theory for partial likelihood	74
4.5	Discrete failure times again	76
4.5.1	Proportional hazards	76
4.5.2	Proportional odds	77
4.6	Time-dependent covariates	78
Chapter 5	Discrete failure times in Competing Risks	83
5.1	Basic probability functions	83
5.2	Latent failure times	85
5.3	Some examples based on Bernoulli trials	89
5.4	Likelihood functions	92
5.4.1	Parametric likelihood	93
5.4.2	Non-parametric estimation from random samples	94
5.4.3	Asymptotic distribution of non-parametric estimators	97
Chapter 6	Hazard-based methods for continuous failure times	101
6.1	Latent failure times vs. hazard modelling	101
6.2	Some examples of hazard modelling	102
6.3	Non-parametric methods for random samples	106
6.3.1	The Kaplan-Meier estimator	106
6.3.2	Interval-censored data	109
6.3.3	Actuarial approach	111

6.4	Proportional hazards and partial likelihood.....	113
6.4.1	The proportional hazards model.....	113
6.4.2	The partial likelihood.....	114
6.4.3	The baseline survivor functions.....	116
6.4.4	Discrete failure times.....	117
Chapter 7	Latent failure times: identifiability crises.....	119
7.1	The Cox-Tsiatis impasse.....	119
7.2	More general identifiability results.....	122
7.3	Specified marginals.....	130
7.4	Discrete failure times.....	134
7.5	Regression case.....	137
7.6	Censoring of survival data.....	139
7.7	Parametric identifiability.....	141
Chapter 8	Martingale counting processes in survival data.....	143
8.1	Introduction.....	143
8.2	Back to basics: probability spaces and conditional expectation.....	144
8.3	Filtrations.....	147
8.4	Martingales.....	148
8.4.1	Discrete time.....	148
8.4.2	Continuous time.....	150
8.5	Counting processes.....	151
8.6	Product integrals.....	153
8.7	Survival data.....	154
8.7.1	A single lifetime.....	154
8.7.2	Independent lifetimes.....	155
8.7.3	Competing risks.....	157
8.7.4	Right-censoring.....	158
8.8	Non-parametric estimation.....	159
8.8.1	Survival times.....	159
8.8.2	Competing risks.....	160
8.9	Non-parametric testing.....	161
8.10	Regression models.....	163
8.10.1	Intensity models and time-dependent covariates.....	163
8.10.2	Proportional hazards model.....	164
8.10.3	Martingale residuals.....	164
8.11	Epilogue.....	165
Appendix 1	Numerical maximisation of likelihood functions.....	167
Appendix 2	Bayesian computation.....	171
