Contents

Chapter I
Modeling Dynamic Systems 1

Modeling Philosophy 1
Some Physical Principles 4
State Models 9
Some Systems Concepts 12
Use of State Models 16

Chapter II
First Order Linear State Models 18

Some Systems Theory 18
Case Study 2-1: Radioactive Decay of Cesium 21
Case Study 2-2: Temperature in a Building 23
Case Study 2-3: An RC Circuit 25
Exercises 28

Chapter III
Second Order Linear State Models 31

Some Systems Theory 31
Case Study 3-1: Ingestion and Metabolism of a Drug 38
Case Study 3-2: Mixing of a Salt Solution 42
Case Study 3-3: DC Motor 47
Case Study 3-4: A Bridged-T-Filter 54
Exercises 59

Chapter IV
Higher Order Linear State Models 67

Some Systems Theory 67
Case Study 4-1: Reduction of Limestone by Heating 69
Case Study 4-2: Vertical Ascent of a Deep Sea Diver 72
Case Study 4-3: A Speedometer Mechanism 76
Case Study 4-4: Automobile Suspension System 79
Case Study 4-5: Magnetic Loudspeaker 83
Exercises 89

Chapter V
First Order Nonlinear State Models 96

Some Systems Theory 96
Case Study 5-1: Management of a Fisheries Resource 99
Case Study 5-2: Liquid Level in a Leaky Tank 104
Case Study 5-3: High Temperature Oven 106
Case Study 5-4: Circuit with Diode 108
Exercises 111

Chapter VI
Second Order Nonlinear State Models 116

Some Systems Theory 116
Case Study 6-1: Motion of a Boat Crossing a River 119
Case Study 6-2: Spread of an Epidemic 121
Case Study 6-3: Tunnel-Diode Circuit 124
Case Study 6-4: Underwater Launch of a Rocket 128
Case Study 6-5: A Study of Blood Sugar and Insulin Levels with Application to Diabetes 131
Exercises 136

Chapter VII
Higher Order Nonlinear State Models 141

Some Systems Theory 141
Case Study 7-1: Continuous Flow Stirred Tank Chemical Reactor 143
Case Study 7-2: A Hot Air Balloon 147
Case Study 7-3: Motion of a Rocket Near Earth 152
Case Study 7-4: Electrostatic Microphone 158
Exercises 163

Chapter VIII
Other Differential State Models 172

Case Study 8-1: Feedback Control of the Liquid Level in a Tank 173
Case Study 8-2: Automatic Regulation of Temperature in a Building 177
Case Study 8-3: Sampled Control of a Field Actuated Motor 180
Exercises 184

Chapter IX
Discrete Time and State Models 187

Case Study 9-1: Occupancy in a Hospital Unit 188
Case Study 9-2: An Inventory Model 189
Case Study 9-3: Neuron Model 190
Case Study 9-4: Coin Operated Dispenser 192
Case Study 9-5: A Binary Communications Channel 193
Case Study 9-6: Discrete Population Model 196
Exercises 198

Appendix A
Units, Dimensions, and Conversion Factors 201

Appendix B
Laplace Transforms 203

Appendix C
Routh-Hurwitz Criteria 207

Appendix D
Linear Approximations 210

Appendix E
Digital Computer Simulation and CSMP 212
