<b>Preface</b>	<b>v</b>
<b>1 Introduction</b>	<b>1</b>
<b>2 Problems and Methods of Optimization</b>	<b>5</b>
2.1 General Statement of the Problems . . . . .	5
2.2 Particular Problems and Methods of Solution . . . . .	6
2.2.1 Experimental Versus Mathematical Optimization . . . . .	6
2.2.2 Static Versus Dynamic Optimization . . . . .	9
2.2.3 Parameter Versus Functional Optimization . . . . .	10
2.2.4 Direct (Numerical) Versus Indirect (Analytic) Optimization . . . . .	13
2.2.5 Constrained Versus Unconstrained Optimization . . . . .	16
2.3 Other Special Cases . . . . .	18
<b>3 Hill climbing Strategies</b>	<b>23</b>
3.1 One Dimensional Strategies . . . . .	25
3.1.1 Simultaneous Methods . . . . .	26
3.1.2 Sequential Methods . . . . .	27
3.1.2.1 Boxing in the Minimum . . . . .	28
3.1.2.2 Interval Division Methods . . . . .	29
3.1.2.2.1 Fibonacci Division. . . . .	29
3.1.2.2.2 The Golden Section. . . . .	32
3.1.2.3 Interpolation Methods . . . . .	33
3.1.2.3.1 Regula Falsi Iteration. . . . .	34
3.1.2.3.2 Newton-Raphson Iteration. . . . .	35
3.1.2.3.3 Lagrangian Interpolation. . . . .	35
3.1.2.3.4 Hermitian Interpolation. . . . .	37
3.2 Multidimensional Strategies . . . . .	38
3.2.1 Direct Search Strategies . . . . .	40
3.2.1.1 Coordinate Strategy . . . . .	41
3.2.1.2 Strategy of Hooke and Jeeves: Pattern Search . . . . .	44
3.2.1.3 Strategy of Rosenbrock: Rotating Coordinates . . . . .	48
3.2.1.4 Strategy of Davies, Swann, and Campey (DSC) . . . . .	54
3.2.1.5 Simplex Strategy of Nelder and Mead . . . . .	57

3.2.1.6	Complex Strategy of Box . . . . .	61
3.2.2	Gradient Strategies . . . . .	65
3.2.2.1	Strategy of Powell: Conjugate Directions . . . . .	69
3.2.3	Newton Strategies . . . . .	74
3.2.3.1	DFP: Davidon-Fletcher-Powell Method (Quasi-Newton Strategy, Variable Metric Strategy) . . . . .	77
3.2.3.2	Strategy of Stewart: Derivative-free Variable Metric Method . . . . .	78
3.2.3.3	Further Extensions . . . . .	81
<b>4</b>	<b>Random Strategies</b>	<b>87</b>
<b>5</b>	<b>Evolution Strategies for Numerical Optimization</b>	<b>105</b>
5.1	The Two Membered Evolution Strategy . . . . .	105
5.1.1	The Basic Algorithm . . . . .	106
5.1.2	The Step Length Control . . . . .	110
5.1.3	The Convergence Criterion . . . . .	113
5.1.4	The Treatment of Constraints . . . . .	115
5.1.5	Further Details of the Subroutine EVOL . . . . .	115
5.2	A Multimembered Evolution Strategy . . . . .	118
5.2.1	The Basic Algorithm . . . . .	118
5.2.2	The Rate of Progress of the $(1, \lambda)$ Evolution Strategy . . . . .	120
5.2.2.1	The Linear Model (Inclined Plane) . . . . .	124
5.2.2.2	The Sphere Model . . . . .	127
5.2.2.3	The Corridor Model . . . . .	134
5.2.3	The Step Length Control . . . . .	142
5.2.4	The Convergence Criterion for $\mu > 1$ Parents . . . . .	145
5.2.5	Scaling of the Variables by Recombination . . . . .	146
5.2.6	Global Convergence . . . . .	149
5.2.7	Program Details of the $(\mu \nmid \lambda)$ ES Subroutines . . . . .	149
5.3	Genetic Algorithms . . . . .	151
5.3.1	The Canonical Genetic Algorithm for Parameter Optimization . . . . .	152
5.3.2	Representation of Individuals . . . . .	153
5.3.3	Recombination and Mutation . . . . .	155
5.3.4	Reproduction and Selection . . . . .	157
5.3.5	Further Remarks . . . . .	158
5.4	Simulated Annealing . . . . .	160
5.5	Tabu Search and Other Hybrid Concepts . . . . .	162
<b>6</b>	<b>Comparison of Direct Search Strategies for Parameter Optimization</b>	<b>165</b>
6.1	Difficulties . . . . .	165
6.2	Theoretical Results . . . . .	166
6.2.1	Proofs of Convergence . . . . .	167
6.2.2	Rates of Convergence . . . . .	168
6.2.3	Q-Properties . . . . .	169

6.2.4	Computing Demands . . . . .	170
6.3	Numerical Comparison of Strategies . . . . .	173
6.3.1	Computer Used . . . . .	174
6.3.2	Optimization Methods Tested . . . . .	175
6.3.3	Results of the Tests . . . . .	179
6.3.3.1	First Test: Convergence Rates for a Quadratic Objective Function . . . . .	179
6.3.3.2	Second Test: Reliability . . . . .	204
6.3.3.3	Third Test: Non-Quadratic Problems with Many Variables . . . . .	217
6.4	Core storage required . . . . .	232
<b>7</b>	<b>Summary and Outlook</b>	<b>235</b>
<b>8</b>	<b>References</b>	<b>249</b>
	<b>Appendices</b>	<b>325</b>
<b>A</b>	<b>Catalogue of Problems</b>	<b>325</b>
A.1	Test Problems for the First Part of the Strategy Comparison . . . . .	325
A.2	Test Problems for the Second Part of the Strategy Comparison . . . . .	327
A.3	Test Problems for the Third Part of the Strategy Comparison . . . . .	361
<b>B</b>	<b>Program Codes</b>	<b>367</b>
B.1	(1+1) Evolution Strategy EVOL . . . . .	367
B.2	( $\mu, \lambda$ ) Evolution Strategies GRUP and REKO . . . . .	375
B.3	( $\mu \dagger \lambda$ ) Evolution Strategy KORR . . . . .	386
<b>C</b>	<b>Programs</b>	<b>415</b>
C.1	Contents of the Floppy Disk . . . . .	415
C.2	About the Program Disk . . . . .	416
C.3	Running the C Programs . . . . .	417
C.3.1	How to Install OptimA on a PC Using LINUX or on a UNIX Workstation . . . . .	417
C.3.2	How to Install OptimA on a PC Under DOS . . . . .	418
C.3.3	Running OptimA . . . . .	418
C.4	Description of the Programs . . . . .	418
C.4.1	How to Incorporate New Functions . . . . .	419
C.5	Examples . . . . .	421
C.5.1	An Application of the Multimembered Evolution Strategy to the Corridor Model . . . . .	421
C.5.2	OptimA Working in Batch Mode . . . . .	422
	<b>Index</b>	<b>425</b>
