CONTENTS

Editor's Introduction 5

Acknowledgments 7

1. Bivariate Regression: Fitting a Straight Line 9
- Exact Versus Inexact Relationships 9
- The Least Squares Principle 13
- The Data 15
- The Scatterplot 15
- The Slope 17
- The Intercept 19
- Prediction 19
- Assessing Explanatory Power: The R^2 20
- R^2 Versus r 25

2. Bivariate Regression: Assumptions and Inferences 26
- The Regression Assumptions 26
- Confidence Intervals and Significance Tests 30
- The One-Tailed Test 33
- Significance Testing: A Rule of Thumb 34
- Reasons Why a Parameter Estimate May Not Be Significant 35
- The Prediction Error for Y 37
- Analysis of Residuals 38
- The Effect of Safety Enforcement on Coal Mining Fatalities: A Bivariate Regression Example 43

3. Multiple Regression 47
- The General Equation 48
- Interpreting the Parameter Estimates 49
- Confidence Intervals and Significance Tests 51
- The R^2 52
- Predicting Y 53
- The Possibility of Interaction Effects 54

A Four-Variable Model: Overcoming Specification Error 56
The Multicollinearity Problem 58
High Multicollinearity: An Example 62
The Relative Importance of the Independent Variables 63
Extending the Regression Model: Dummy Variables 66
Determinants of Coal Mining Fatalities: A Multiple Regression Example 71
What Next? 73
