Contents

Preface vii

Abbreviations ix
List of Algorithms x

1. Introduction 1

2. Some Basic Concepts 13

2.1 Graphs, Paths and Chains 13
2.2 Matrices and Computer Representation of Graphs 21
2.3 Spanning Trees 29
2.4 Multi-stage Problems and Search Trees 35
Exercises 43

3. Branch-and-bound Methods 47

3.1 Concepts of B & B 47
3.2 Integer Linear Programming 57
Exercises 65

4. Shortest Route Problems 69

4.1 Shortest Path between Two Points 70
4.2 The Shortest Path Problem: General Case 78
4.3 Other Shortest Path Problems 84
Exercises 91

5. Location Problems 94

5.1 Single Facility Problems 95
5.2 Ordinary Location Problems 101
5.3 Location of Emergency Facilities 109
Exercises 118

6. Project Networks 121

6.1 Critical Path Methods 121
6.2 Alternative Approaches 129

6.3 Resource Allocation 133
Exercises 144

7. The Travelling Salesman and Chinese Postman Problems 148

7.1 Reduction-based Methods for Solving TSP 148
7.2 Other Approaches to TSP 157
7.3 The Chinese Postman Problem and Matching 163
Exercises 169

8. Distribution Problems 173

8.1 Single-depot Vehicle Routing Problems: TSP and Savings Based Methods 174
8.2 Angular Approaches to Vehicle Routing 185
8.3 Multi-depot Distribution Problems 190
Exercises 193

9. Flows in Networks: Basic Model 197

9.1 Complete Flows and Maximal Flows 197
9.2 Algorithms for Finding Maximal Flows 206
Exercises 212

10. Network Flow: Extensions 214

10.1 Various Extensions 214
10.2 Minimal Cost Flows 288
10.3 The Simplex Method Applied to Network Problems 240
Exercises 252

11. Heuristic Methods 255

11.1 Improvement Methods 256
11.2 Constructive Heuristic Methods 261
11.3 Problem Reduction: AND–OR Graphs 271
Exercises 279

Appendix: Computational Complexity 282
