CHAPTER	PAGE
1 THE GENERAL DECISION PROBLEM . . . . .	1
1 Statistical inference and statistical decisions . . . . .	1
2 Specification of a decision problem . . . . .	2
3 Randomization; choice of experiment . . . . .	6
4 Optimum procedures . . . . .	8
5 Invariance and unbiasedness . . . . .	10
6 Bayes and minimax procedures . . . . .	12
7 Maximum likelihood . . . . .	14
8 Complete classes . . . . .	16
9 Sufficient statistics . . . . .	17
10 Problems . . . . .	21
11 References . . . . .	26
2 THE PROBABILITY BACKGROUND . . . . .	30
1 Probability and measure . . . . .	30
2 Integration . . . . .	33
3 Statistics and subfields . . . . .	36
4 Conditional expectation and probability . . . . .	39
5 Conditional probability distributions . . . . .	43
6 Characterization of sufficiency . . . . .	47
7 Exponential families . . . . .	50
8 Problems . . . . .	54
9 References . . . . .	58
3 UNIFORMLY MOST POWERFUL TESTS . . . . .	60
1 Stating the problem . . . . .	60
2 The Neyman-Pearson fundamental lemma . . . . .	63
3 Distributions with monotone likelihood ratio . . . . .	68
4 Comparison of experiments . . . . .	75
5 Confidence bounds . . . . .	78
6 A generalization of the fundamental lemma . . . . .	83
7 Two-sided hypotheses . . . . .	88
8 Least favorable distributions . . . . .	90

CHAPTER		PAGE
	9 Testing the mean and variance of a normal distribution . . . . .	94
	10 Sequential probability ratio tests . . . . .	97
	11 Power and expected sample size of sequential probability ratio tests . . . . .	100
	12 Optimum property of sequential probability ratio tests . . . . .	104
	13 Problems . . . . .	110
	14 References . . . . .	120
4	UNBIASEDNESS: THEORY AND FIRST APPLICATIONS . . . . .	125
	1 Unbiasedness for hypothesis testing . . . . .	125
	2 One-parameter exponential families . . . . .	126
	3 Similarity and completeness . . . . .	130
	4 UMP unbiased tests for multiparameter exponential families . . . . .	134
	5 Comparing two Poisson or binomial populations . . . . .	140
	6 Testing for independence in a $2 \times 2$ table . . . . .	143
	7 The sign test . . . . .	147
	8 Problems . . . . .	150
	9 References . . . . .	157
5	UNBIASEDNESS: APPLICATIONS TO NORMAL DISTRIBUTIONS; CONFIDENCE INTERVALS . . . . .	160
	1 Statistics independent of a sufficient statistic . . . . .	160
	2 Testing the parameters of a normal distribution . . . . .	163
	3 Comparing the means and variances of two normal distributions . . . . .	168
	4 Confidence intervals and families of tests . . . . .	173
	5 Unbiased confidence sets . . . . .	176
	6 Regression . . . . .	180
	7 Permutation tests . . . . .	183
	8 Most powerful permutation tests . . . . .	184
	9 Randomization as a basis for inference . . . . .	189
	10 Permutation tests and randomization . . . . .	192
	11 Testing for independence in a bivariate normal distribution . . . . .	197
	12 Problems . . . . .	199
	13 References . . . . .	210
6	INVARIANCE . . . . .	213
	1 Symmetry and invariance . . . . .	213
	2 Maximal invariants . . . . .	215
	3 Most powerful invariant tests . . . . .	218
	4 Sample inspection by variables . . . . .	222
	5 Almost invariance . . . . .	225

CHAPTER		PAGE
6	Unbiasedness and invariance . . . . .	228
7	Rank tests . . . . .	232
8	The two-sample problem . . . . .	236
9	The hypothesis of symmetry . . . . .	240
10	Invariant confidence sets . . . . .	243
11	Confidence bands for a distribution function . . . . .	246
12	Problems . . . . .	248
13	References . . . . .	261
7	LINEAR HYPOTHESES . . . . .	265
1	A canonical form . . . . .	265
2	Linear hypotheses and least squares . . . . .	269
3	Tests of homogeneity . . . . .	272
4	Two-way classification: One observation per cell . . . . .	276
5	Two-way classification: $m$ observations per cell . . . . .	279
6	Regression . . . . .	283
7	Model II: One-way classification . . . . .	286
8	Nested classifications . . . . .	290
9	The multivariate linear hypothesis . . . . .	293
10	Reduction by invariance . . . . .	296
11	Applications . . . . .	300
12	$\chi^2$ tests: Simple hypothesis and unrestricted alternatives . . . . .	303
13	$\chi^2$ and likelihood ratio tests . . . . .	306
14	Problems . . . . .	312
15	References . . . . .	322
8	THE MINIMAX PRINCIPLE . . . . .	326
1	Tests with guaranteed power . . . . .	326
2	Examples . . . . .	329
3	Maximin tests and invariance . . . . .	333
4	The Hunt-Stein theorem . . . . .	335
5	Most stringent tests . . . . .	339
6	Problems . . . . .	341
7	References . . . . .	345
APPENDIX		
1	Equivalence relations; groups . . . . .	348
2	Convergence of distributions . . . . .	349
3	Dominated families of distributions . . . . .	352
4	The weak compactness theorem . . . . .	354
