Preface — vii

Introduction — 1

Guide to the reader and interdependence of sections — 5

Notation — 7

- 1 Positive linear operators and approximation problems — 13**
 - 1.1 Positive linear functionals and operators — 13
 - 1.1.1 Positive Radon measures — 15
 - 1.1.2 Choquet boundaries — 21
 - 1.1.3 Bauer simplices — 23
 - 1.2 Korovkin-type approximation theorems — 26
 - 1.3 Further convergence criteria for nets of positive linear operators — 30
 - 1.4 Asymptotic behaviour of Lipschitz contracting Markov semigroups — 38
 - 1.5 Asymptotic formulae for positive linear operators — 45
 - 1.6 Moduli of smoothness and degree of approximation by positive linear operators — 54
 - 1.7 Notes and comments — 59

- 2 C_0 -semigroups of operators and linear evolution equations — 63**
 - 2.1 C_0 -semigroups of operators and abstract Cauchy problems — 63
 - 2.1.1 C_0 -semigroups and their generators — 63
 - 2.1.2 Generation theorems and abstract Cauchy problems — 70
 - 2.2 Approximation of C_0 -semigroups — 77
 - 2.3 Feller and Markov semigroups of operators — 88
 - 2.3.1 Basic properties — 88
 - 2.3.2 Markov Processes — 92
 - 2.3.3 Second-order differential operators on real intervals and Feller theory — 95
 - 2.3.4 Multidimensional second-order differential operators and Markov semigroups — 98
 - 2.4 Notes and comments — 103

- 3 Bernstein-Schnabl operators associated with Markov operators — 105**
 - 3.1 Generalities, definitions and examples — 106
 - 3.1.1 Bernstein-Schnabl operators on $[0, 1]$ — 108

3.1.2	Bernstein-Schnabl operators on Bauer simplices —	109
3.1.3	Bernstein operators on polytopes —	110
3.1.4	Bernstein-Schnabl operators associated with strictly elliptic differential operators —	110
3.1.5	Bernstein-Schnabl operators associated with tensor products of Markov operators —	111
3.1.6	Bernstein-Schnabl operators associated with convex combinations of Markov operators —	112
3.1.7	Bernstein-Schnabl operators associated with convex convolution products of Markov operators —	113
3.2	Approximation properties and rate of convergence —	115
3.3	Preservation of Hölder continuity —	121
3.3.1	Smallest Lipschitz constants and triangles —	127
3.3.2	Smallest Lipschitz constants and parallelograms —	128
3.4	Bernstein-Schnabl operators and convexity —	131
3.5	Monotonicity properties —	143
3.6	Notes and comments —	153
4	Differential operators and Markov semigroups associated with Markov operators —	155
4.1	Asymptotic formulae for Bernstein-Schnabl operators —	156
4.2	Differential operators associated with Markov operators —	162
4.3	Markov semigroups generated by differential operators associated with Markov operators —	169
4.4	Preservation properties and asymptotic behaviour —	181
4.5	The special case of the unit interval —	189
4.5.1	Degenerate differential operators on $[0, 1]$ —	189
4.5.2	Approximation properties by means of Bernstein-Schnabl operators —	194
4.5.3	Preservation properties and asymptotic behaviour —	196
4.5.4	The saturation class of Bernstein-Schnabl operators and the Favard class of their limit semigroups —	199
4.6	Notes and comments —	205
5	Perturbed differential operators and modified Bernstein-Schnabl operators —	209
5.1	Lototsky-Schnabl operators —	210
5.2	A modification of Bernstein-Schnabl operators —	216
5.3	Approximation properties —	220
5.4	Preservation properties —	224
5.5	Asymptotic formulae —	227

- 5.6 Modified Bernstein-Schnabl operators and first-order perturbations — **235**
- 5.7 The unit interval — **244**
- 5.7.1 Complete degenerate second-order differential operators on $[0, 1]$ — **244**
- 5.7.2 Approximation properties by means of modified Bernstein-Schnabl operators — **257**
- 5.8 The d -dimensional simplex and hypercube — **261**
- 5.9 Notes and comments — **265**

Appendices — 267

- A.1 A classification of Markov operators on two dimensional convex compact subsets — **267**
- A.2 Rate of convergence for the limit semigroup of Bernstein operators — **281**

Bibliography — 289

Symbol index — 305

Index — 309
