1	Introduction	1
	References.	5
2	The Finite Element (FE) Method	7
2.1	Finite Element Formulation	8
2.2	Finite Element Method for a 1D Problem	13
2.3	Nodal (Lagrangian) Finite Elements	20
2.3.1	Basic Properties	21
2.3.2	Quadrilateral Element in \mathbb{R}^2	23
2.3.3	Triangular Element in \mathbb{R}^2	26
2.3.4	Tetrahedron Element in \mathbb{R}^3	27
2.3.5	Hexahedron Element in \mathbb{R}^3	28
2.3.6	Wedge Element in \mathbb{R}^3	30
2.3.7	Pyramidal Element in \mathbb{R}^3	31
2.3.8	Global/Local Derivatives	32
2.3.9	Numerical Integration	34
2.4	Finite Element Procedure	36
2.5	Time Discretization	41
2.5.1	Parabolic Differential Equation	41
2.5.2	Hyperbolic Differential Equation	45
2.6	Integration over Surfaces	48
2.7	Edge Nédélec Finite Elements	49
2.8	Discretization Error	51
2.9	Finite Elements of Higher Order	55
2.9.1	Legendre Polynomials and Hierarchical Finite Elements	57
2.9.2	Lagrange Polynomials and Spectral Elements	65
2.10	Flexible Discretization	67
2.10.1	Mortar FEM	69
2.10.2	Nitsche Type Mortaring	82

2.10.3	Numerical Example.	87
References.	89
3	Mechanical Field	93
3.1	Navier's Equation.	93
3.2	Deformation and Displacement Gradient	97
3.3	Mechanical Strain	98
3.4	Constitutive Equations.	102
3.4.1	Plane Strain State	104
3.4.2	Plane Stress State	105
3.4.3	Axisymmetric Stress–Strain Relations	106
3.5	Waves in Solid Bodies	106
3.6	Material Properties	108
3.7	Numerical Computation.	110
3.7.1	Linear Elasticity	110
3.7.2	Damping Model	112
3.7.3	Geometric Nonlinear Case	114
3.7.4	Numerical Example.	120
3.8	Locking and Efficient Solution Approaches	121
3.8.1	Incompatible Modes Method	124
3.8.2	Enhanced Assumed Strain Method	126
3.8.3	Balanced Reduced and Selective Integration.	128
References.	134
4	Flow Field	137
4.1	Spatial Reference Systems	138
4.2	Reynolds' Transport Theorem.	139
4.3	Conservation Equations.	140
4.3.1	Conservation of Mass	140
4.3.2	Conservation of Momentum.	141
4.3.3	Conservation of Energy	144
4.3.4	Constitutive Equations.	145
4.4	Navier-Stokes Equations	145
4.5	Characterization of Flows by Dimensionless Numbers.	146
4.6	Finite Element Formulation	147
4.7	Numerical Examples	151
4.7.1	Steady Channel Flow	151
4.7.2	Unsteady Flow Around a Square	154
References.	156
5	Acoustic Field.	159
5.1	Wave Theory of Sound	159
5.1.1	Conservation of Mass (Continuity Equation)	161
5.1.2	Conservation of Momentum (Euler Equation).	161

5.1.3	Pressure-Density Relation (State Equation)	162
5.1.4	Linear Acoustic Wave Equation	164
5.1.5	Acoustic Quantities	166
5.1.6	Plane and Spherical Waves	168
5.2	Quantitative Measure of Sound	172
5.3	Nonlinear Acoustic Wave Equation	176
5.4	Numerical Computation	181
5.4.1	Linear Acoustic Wave Equation	181
5.4.2	Linear Acoustic Conservation Equations	184
5.4.3	Nonlinear Acoustics	187
5.4.4	Non-conforming Grids	190
5.4.5	Discretization Error	194
5.5	Treatment of Open Domain Problems	198
5.5.1	Absorbing Boundary Conditions	199
5.5.2	Perfectly Matched Layer (PML) Technique	201
5.6	Numerical Examples	212
5.6.1	Transient Wave Propagation in Unbounded Domains	212
5.6.2	Harmonic Wave Propagation in Unbounded Domains	216
5.6.3	Nonlinear Wave Propagation in a Channel	218
	References	223
6	Electromagnetic Field	227
6.1	Maxwell's Equations	227
6.1.1	Law of Ampère	229
6.1.2	Law of Faraday	230
6.1.3	Law of Gauss	233
6.1.4	Solenoidal Magnetic Field	234
6.2	Quasistatic Electromagnetic Fields	235
6.2.1	Magnetic Vector Potential	235
6.2.2	Skin Effect	236
6.3	Electrostatic Field	238
6.4	Material Properties	239
6.4.1	Magnetic Permeability	239
6.4.2	Electrical Conductivity	242
6.4.3	Dielectric Permittivity	243
6.5	Electromagnetic Interface Conditions	244
6.5.1	Continuity Relations for Magnetic Field	244
6.5.2	Continuity Relations for Electric Field	245
6.5.3	Continuity Relations for Electric Current Density	247
6.6	Numerical Computation: Electrostatics	247
6.7	Numerical Computation: Electromagnetics	249
6.7.1	Formulation	249

6.7.2	Discretization with Edge Elements	255
6.7.3	Discretization with Nodal Finite Elements	257
6.7.4	Newton's Method for the Nonlinear Case	260
6.7.5	Approximation of <i>BH</i> Curve	263
6.7.6	Higher Order Edge Elements	265
6.7.7	Modeling of Current-Loaded Coil	271
6.7.8	Computation of Global Quantities	272
6.7.9	Induced Electric Voltage	275
6.7.10	Voltage-Loaded Coil	275
6.8	Numerical Examples	277
6.8.1	Thin Iron Plate	277
6.8.2	TEAM-13 Benchmark Problem	280
