Introduction xii

PART I Laboratory and Athlete Preparation 1

1 Quality Assurance in Exercise Physiology Laboratories 3

Evaluating Quality Assurance 4 • Australian Certification Model 5 •
Implementing Quality Assurance 7 • References 10

2 Pretest Environment and Athlete Preparation 11

Risk Management Processes 11 • Quality Assurance Considerations 13 •
Medical Screening 13 • Musculoskeletal Screening 14 • Informed Con-
sent 14 • Pretest Athlete Questionnaire 15 • Pretest Diet Consider-
ations 15 • Pretest Checklists 15 • References 17

3 Data Collection and Analysis 35

Data Capture and Storage 35 • Data Cleansing 35 • Data Transforma-
tion 36 • Analytical Approaches to Testing Athletes 36 • Measurement
Studies 37 • Presentation of Results 40 • References 42

PART II Testing Concepts and Athlete Monitoring 43

4 Ergometer-Based Maximal Neuromuscular Power 45

Muscular Power Output 45 • Maximal Power Output 45 • Peak Power
Output 46 • Maximal Neuromuscular Power 46 • Expected Test Scores and
Data Interpretation 53 • References 56

5 Anaerobic Capacity 59

Energy Systems 59 • Lactate and Fatigue 60 • Anaerobic ATP Produc-
tion 60 • Maximal Accumulated Oxygen Deficit 61 • References 74

6	Blood Lactate Thresholds	77
	Blood Lactate Testing Rationale 77 • Concepts and Controversies 79 • Test Protocols 84 • Practical Applications 91 • References 96	
7	Determination of Maximal Oxygen Consumption ($\dot{V}O_2$max)	103
	Theoretical Rationale 103 • Ergometers 104 • $\dot{V}O_2$ Test Systems 108 • Volumetric and Gas Analysis Equipment 109 • General Procedures 113 • Calculations 117 • References 121	
8	Altitude Training	123
	Classical Altitude Training 123 • Live High, Train Low 124 • Intermittent Hypoxic Exposure and Training 124 • Using Hypoxia to Prepare for Competition at Altitude 124 • Using Hypoxia to Prepare for Competition at Sea Level 126 • Altitude and Illness 128 • References 128	
9	Heat	131
	Physiological Responses to Hot Environmental Conditions 131 • Performance in the Heat 133 • Use of Heat and Humidity as a Training Intervention 141 • Core Body Temperature Measurement Site 142 • Heat-Associated Illness 142 • References 143	
10	Physiological Recovery	149
	Compression Clothing 149 • Hydrotherapy 150 • Sleep 155 • Massage 156 • Stretching 158 • Active Recovery 159 • References 160	
PART III Fundamental Assessment Principles and Protocols		165
11	Assessment of Physique	167
	Body Composition Models 168 • Air Displacement Plethysmography 168 • Dual Energy X-Ray Absorptiometry 169 • Bioelectrical Impedance Analysis 171 • Surface Anthropometry 172 • Alternate Technologies 180 • Factors Influencing Reliability of Methods 180 • References 193	
12	Testing and Training Agility	199
	Factors Influencing Agility Performance 199 • Contemporary Definition of Agility 199 • Agility Testing Protocols 201 • Individual Interpretation of Tests 204 • Training Directions Based on Test Results 205 • References 205	
13	Strength and Power Assessment Protocols	207
	Relationship Between Strength and Power 207 • Strength and Power Assessment Principles 208 • Strength, Power, and Functional Performance 209 • References 226	
14	Field Testing Principles and Protocols	231
	Test Reliability 231 • Athlete Preparation 231 • Test Environment 232 • References 248	

15	Perceptual–Cognitive and Perceptual–Motor Contributions to Elite Performance	249
	Anticipating the Movement of an Opponent 249 • Recognizing Typical Patterns of Play in Team Sports 252 • Possessing Superior Decision-Making Skills 252 • Superior Anticipation of Event Probabilities 254 • Improved Capacity to Dual Task 255 • Constructing and Implementing a Testing Battery 256 • Task Representation 257 • References 258	
PART IV Physiological Protocols for the Assessment of Athletes in Specific Sports		261
16	Australian Football Players	263
	Athlete Preparation 263 • Test Environment 264 • References 272	
17	Basketball Players	273
	Athlete Preparation 274 • Test Environment 274 • References 286	
18	Cricket Players	289
	Athlete Preparation 290 • Test Environment 290 • References 297	
19	High-Performance Cyclists	299
	Track Cycling 300 • Road Cycling 300 • BMX 300 • Mountain Bike 300 • Athlete Preparation 301 • Test Environment 302 • References 322	
20	Football (Soccer) Players	323
	Athlete Preparation 323 • Test Environment 323 • References 330	
21	Hockey Players	331
	Athlete Preparation 332 • Test Environment 332 • References 340	
22	Netball Players	341
	Athlete Preparation 342 • Test Environment 342 • References 351	
23	Rowers	353
	Athlete Preparation 354 • Test Environment 354 • References 369	
24	Rugby League Players	371
	Athlete Preparation 371 • Test Environment 372 • References 378	
25	Rugby Union Players	379
	Athlete Preparation 379 • Test Environment 379 • References 396	
26	Runners and Walkers	397
	Athlete Preparation 397 • Test Environment 398 • References 409	

27 Sailors	411
Athlete Preparation 412 • Test Environment 412 • References 419	
28 Sprint Kayak Athletes	421
Athlete Preparation 422 • Test Environment 422 • References 433	
29 Swimmers	435
Practical Applications of Physiological Testing 435 • Athlete Preparation 436 • Test Environment 437 • References 447	
30 Tennis Players	449
Athlete Preparation 449 • Test Environment 450 • References 461	
31 Triathletes	463
Establishing Guidelines for Quantifying Training and Racing 463 • Athlete Preparation and Test Environment 463 • References 474	
32 Indoor and Beach Volleyball Players	475
Indoor Volleyball 475 • Beach Volleyball 476 • Athlete Preparation 477 • Test Environment 477 • References 485	
33 Water Polo Players	487
Athlete Preparation 487 • Test Environment 487 • References 497
