

Contents

Set-Theoretical Terms and Notations Used in This Book, but not Generally Adopted.	1
---	---

Chapter 1

TOPOLOGICAL SPACES	5
------------------------------	---

§ 1. FUNDAMENTAL CONCEPTS.	
------------------------------------	--

1. Topologies.	5
2. Metrics	8
3. Subspaces	10
4. Continuous Maps	11
5. Separation Axioms	15
6. Countability Axioms	19
7. Compactness	21

§ 2. CONSTRUCTIONS	26
------------------------------	----

1. Sums.	26
2. Products.	27
3. Quotients	31
4. Glueing	34
5. Projective Spaces	38
6. More Special Constructions.	42
7. Spaces of Continuous Maps	46
8. The Case of Pointed Spaces.	49
9. Exercises	55

§ 3. HOMOTOPIES.	56
--------------------------	----

1. General Definitions	56
2. Paths	60
3. Connectedness and k -Connectedness	61
4. Local Properties.	65
5. Borsuk Pairs.	66
6. CNRS-Spaces	70
7. Homotopy Properties of Topological Constructions	72
8. Exercises	78

Chapter 2

CELLULAR SPACES.	81
--------------------------	----

§ 1. CELLULAR SPACES AND THEIR TOPOLOGICAL PROPERTIES.	81
--	----

1. Fundamental Concepts.	81
2. Glueing Cellular Spaces from Balls.	86

3.	The Canonical Cellular Decompositions of Spheres, Balls, and Projective Spaces.	88
4.	More Topological Properties of Cellular Spaces	89
5.	Cellular Constructions	94
6.	Exercises.	98
§ 2.	SIMPLICIAL SPACES.	99
1.	Euclidean Simplices.	99
2.	Simplicial Spaces and Simplicial Maps.	101
3.	Simplicial Schemes	105
4.	Polyhedra.	106
5.	Simplicial Constructions	107
6.	Stars. Links. Regular Neighborhoods.	114
7.	Simplicial Approximation of Continuous Maps.	118
8.	Exercises.	119
§ 3.	HOMOTOPY PROPERTIES OF CELLULAR SPACES	120
1.	Cellular Pairs	120
2.	Cellular Approximation of Continuous Maps.	123
3.	k -Connected Cellular Pairs	126
4.	Simplicial Approximation of Cellular Spaces.	130
5.	Exercises.	132
Chapter 3		
	SMOOTH MANIFOLDS	133
§ 1.	FUNDAMENTAL CONCEPTS	133
1.	Topological Manifolds.	133
2.	Differentiable Structures.	141
3.	Orientations	150
4.	The Manifold of Tangent Vectors.	156
5.	Embeddings, Immersions, and Submersions.	161
6.	Complex Structures	166
7.	Exercises.	171
§ 2.	STIEFEL AND GRASSMAN MANIFOLDS	171
1.	Stiefel Manifolds.	171
2.	Grassman Manifolds	177
3.	Some Low-Dimensional Stiefel and Grassman Manifolds	185
4.	Exercises.	186
§ 3.	A DIGRESSION: THREE THEOREMS FROM CALCULUS	187
1.	Polynomial Approximation of Functions.	187
2.	Singular Values.	191
3.	Nondegenerate Critical Points.	194
§ 4.	EMBEDDINGS. IMMERSIONS. SMOOTHINGS. APPROXIMATIONS	197
1.	Spaces of Smooth Maps.	197
2.	The Simplest Embedding Theorems.	200
3.	Transversalizations and Tubes.	202
4.	Smoothing Maps in the Case of Closed Manifolds	205
5.	Glueing Manifolds Smoothly	208

6.	Smoothing Maps in the Presence of a Boundary.	214
7.	General Position.	219
8.	Maps Transverse to a Submanifold.	225
9.	Raising the Smoothness Class of a Manifold.	228
10.	Approximation of Maps by Embeddings and Immersions.	233
11.	Exercises	237
§ 5.	THE SIMPLEST STRUCTURE THEOREMS.	239
1.	Morse Functions	239
2.	Cobordisms and Surgery.	243
3.	Two-dimensional Manifolds	255
4.	Exercises	263
Chapter 4		
BUNDLES.		
§ 1.	BUNDLES WITHOUT GROUP STRUCTURE.	265
1.	General Definitions.	265
2.	Locally Trivial Bundles.	267
3.	Serre Bundles.	269
4.	Bundles With Map Spaces as Total Spaces.	273
5.	Exercises.	276
§ 2.	A DIGRESSION: TOPOLOGICAL GROUPS AND TRANSFORMATION GROUPS.	276
1.	Topological Groups	276
2.	Groups of Homeomorphisms	282
3.	Actions.	285
4.	Exercises.	296
§ 3.	BUNDLES WITH A GROUP STRUCTURE	297
1.	Spaces With F-Structure.	297
2.	Steenrod Bundles	299
3.	Associated Bundles	304
4.	Ehresmann-Feldbau Bundles.	308
5.	Exercises.	311
§ 4.	THE CLASSIFICATION OF STEENROD BUNDLES	311
1.	Steenrod Bundles and Homotopies.	311
2.	Universal Bundles.	316
3.	The Milnor Bundles	319
4.	Reductions of the Structure Group.	321
5.	Exercises.	323
§ 5.	VECTOR BUNDLES	324
1.	General Definitions.	324
2.	Constructions.	331
3.	The Classical Universal Vector Bundles	336
4.	The Most Important Reductions of the Structure Group.	343
5.	Exercises.	345

§ 6.	SMOOTH BUNDLES	346
	1. Fundamental Concepts	346
	2. Smoothings and Approximations.	350
	3. Smooth Vector Bundles.	353
	4. Tangent and Normal Bundles	359
	5. Degree	364
	6. Exercises.	371
Chapter 5		
	HOMOTOPY GROUPS.	373
§ 1.	THE GENERAL THEORY	373
	1. Absolute Homotopy Groups.	373
	2. A Digression: Local Systems	378
	3. Local Systems of Homotopy Groups of a Topological Space.	380
	4. Relative Homotopy Groups.	384
	5. A Digression: Sequences of Groups and Homomorphisms, and π -Sequences.	390
	6. The Homotopy Sequence of a Pair	398
	7. The Local System of Homotopy Groups of the Fibers of a Serre Bundle.	402
	8. The Homotopy Sequence of a Serre Bundle	405
	9. The Influence of Other Structures Upon Homotopy Groups.	411
	10. Alternative Descriptions of the Homotopy Groups	416
	11. Additional Theorems	420
	12. Exercises	423
§ 2.	THE HOMOTOPY GROUPS OF SPHERES AND OF CLASSICAL MANIFOLDS	424
	1. Suspension in the Homotopy Groups of Spheres	424
	2. The Simplest Homotopy Groups of Spheres.	429
	3. The Composition Product.	433
	4. Information: Homotopy Groups of Spheres.	436
	5. The Homotopy Groups of Projective Spaces and Lenses.	438
	6. The Homotopy Groups of Classical Groups.	439
	7. The Homotopy Groups of Stiefel Manifolds and Spaces	441
	8. The Homotopy Groups of Grassman Manifolds and Spaces	443
	9. Exercises.	444
§ 3.	HOMOTOPY GROUPS OF CELLULAR SPACES	445
	1. The Homotopy Groups of One-dimensional Cellular Spaces.	445
	2. The Effect of Attaching Balls.	446
	3. The Fundamental Group of a Cellular Space.	448
	4. Homotopy Groups of Compact Surfaces.	451
	5. The Homotopy Groups of Bouquets.	453
	6. The Homotopy Groups of a k -Connected Cellular Pair.	455
	7. Spaces With Prescribed Homotopy Groups	459
	8. Eight Instructive Examples	460
	9. Exercises.	462

§ 4.	WEAK HOMOTOPY EQUIVALENCE.	463
	1. Fundamental Concepts	463
	2. Weak Homotopy Equivalence and Constructions.	468
	3. Cellular Approximations of Topological Spaces.	472
	4. Exercises.	478
§ 5.	THE WHITEHEAD PRODUCT.	478
	1. The Class $wd(m,n)$	478
	2. Definition and the Simplest Properties of the Whitehead Product	482
	3. Applications	484
	4. Exercises.	486
§ 6.	CONTINUATION OF THE THEORY OF BUNDLES.	487
	1. Weak Homotopy Equivalence and Steenrod Bundles	487
	2. Theory of Coverings.	490
	3. Orientations	500
	4. Some Bundles Over Spheres.	501
	5. Exercises.	503
	BIBLIOGRAPHY	506
	INDEX.	508
	GLOSSARY OF SYMBOLS.	517
