

Contents

Part I Option Pricing

1	Derivatives	3
1.1	Recommended Literature	9
1.2	Exercises	9
2	Introduction to Option Management	11
2.1	Arbitrage Relations	11
2.2	Portfolio Insurance	21
2.3	Binary One-Period Model	27
2.4	Recommended Literature	32
2.5	Exercises	32
3	Basic Concepts of Probability Theory	37
3.1	Real Valued Random Variables	37
3.2	Expectation and Variance	40
3.3	Skewness and Kurtosis	41
3.4	Random Vectors, Dependence, Correlation	42
3.5	Conditional Probabilities and Expectations	43
3.6	Recommended Literature	45
3.7	Exercises	45
4	Stochastic Processes in Discrete Time	49
4.1	Binomial Processes	49
4.2	Trinomial Processes	53
4.3	General Random Walks	54
4.4	Geometric Random Walks	55
4.5	Binomial Models with State Dependent Increments	57
4.6	Recommended Literature	57
4.7	Exercises	58

5	Stochastic Integrals and Differential Equations	59
5.1	Wiener Process	59
5.2	Stochastic Integration	63
5.3	Stochastic Differential Equations	65
5.4	The Stock Price as a Stochastic Process	68
5.5	Itô's Lemma	70
5.6	Recommended Literature	73
5.7	Exercises	73
6	Black–Scholes Option Pricing Model	75
6.1	Black–Scholes Differential Equation	75
6.2	Black–Scholes Formula for European Options	82
6.2.1	Numerical Approximation	86
6.3	Simulation	88
6.3.1	Linear Congruential Generator	89
6.3.2	Fibonacci Generators	93
6.3.3	Inversion Method	95
6.3.4	Box–Muller Method	96
6.3.5	Marsaglia Method	97
6.4	Risk Management and Hedging	99
6.4.1	Delta Hedging	101
6.4.2	Gamma and Theta	104
6.4.3	Rho and Vega	107
6.4.4	Volga and Vanna	108
6.4.5	Historical and Implied Volatility	110
6.4.6	Realised Volatility	113
6.5	Recommended Literature	114
6.6	Exercises	114
7	Binomial Model for European Options	121
7.1	Cox–Ross–Rubinstein Approach to Option Pricing	122
7.2	Discrete Dividends	125
7.2.1	Dividends as a Percentage of the Stock Price	127
7.2.2	Dividends as a Fixed Amount of Money	128
7.3	Recommended Literature	130
7.4	Exercises	130
8	American Options	133
8.1	Arbitrage Relations for American Options	133
8.2	The Trinomial Model	140
8.3	Recommended Literature	144
8.4	Exercises	144
9	Exotic Options	147
9.1	Compound Options, Option on Option	148
9.2	Chooser Options or “As You Wish” Options	150
9.3	Barrier Options	150

9.4	Asian Options	152
9.5	Lookback Options	154
9.6	Cliquet Options	156
9.7	Basket Options	157
9.8	Recommended Literature	158
9.9	Exercises	158
10	Interest Rates and Interest Rate Derivatives	161
10.1	Definitions and Notation	162
10.1.1	Money Market Account	164
10.2	Risk Neutral Valuation and Numeraire Measures	165
10.2.1	Principles of Risk Neutral Valuation	165
10.2.2	Change of Numeraire	166
10.2.3	Equivalent Martingale Measure	167
10.2.4	Traditional Risk Neutral Numeraire	168
10.2.5	Other Choices of Numeraire	169
10.3	Interest Rate Derivatives	171
10.3.1	Forward Rate Agreement	171
10.3.2	Interest Rate Swap	171
10.3.3	The Black Model	173
10.3.4	Bond Option	174
10.3.5	Caps and Floors	175
10.3.6	Swaption	176
10.4	Interest Rate Modeling	177
10.4.1	Short Rate Models	178
10.4.2	Heath Jarrow Morton Framework	181
10.4.3	LIBOR Market Model	184
10.5	Bond Valuation	186
10.5.1	The Bond Valuation Equation	186
10.5.2	Solving the Zero Bond Valuation	187
10.6	Calibrating Interest Rate Models	189
10.6.1	CIR Model: Estimation	189
10.6.2	CIR Model: Implementation Results	191
10.6.3	LMM: Discretization of the Forward Rate	192
10.6.4	LMM: Instantaneous Volatility Function	193
10.6.5	LMM: Implementation Results	194
10.7	Recommended Literature	195
10.8	Exercises	196

Part II Statistical Models of Financial Time Series

11	Introduction: Definitions and Concepts	199
11.1	Some Definitions	200
11.2	Statistical Analysis of German and British Stock Returns	206
11.3	Expectations and Efficient Markets	209

11.4	Econometric Models: A Brief Summary.....	214
11.4.1	Stock Prices: The CAPM	214
11.4.2	Exchange Rate: Theory of the Interest Rate Parity	215
11.4.3	Term Structure: The Cox–Ingersoll–Ross Model.....	217
11.4.4	Options: The Black–Scholes Model.....	220
11.4.5	The Market Price of Risk	221
11.5	The Random Walk Hypothesis	224
11.6	Unit Root Tests.....	226
11.6.1	Dickey–Fuller Test	226
11.6.2	The KPSS Test	229
11.6.3	Variance Ratio Tests.....	231
11.7	Recommended Literature	233
11.8	Exercises	234
12	ARIMA Time Series Models	237
12.1	Moving Average Processes	238
12.2	Autoregressive Process	239
12.3	ARMA Models.....	243
12.4	Partial Autocorrelation.....	244
12.5	Estimation of Moments	247
12.5.1	Estimation of the Mean Function.....	248
12.5.2	Estimation of the Covariance Function	249
12.5.3	Estimation of the ACF	250
12.6	Portmanteau Statistics	251
12.7	Estimation of AR(p) Models.....	252
12.8	Estimation of MA(q) and ARMA(p, q) Models	253
12.9	Recommended Literature	258
12.10	Exercises	258
13	Time Series with Stochastic Volatility	263
13.1	ARCH and GARCH Models	265
13.1.1	ARCH(1): Definition and Properties	267
13.1.2	Estimation of ARCH(1) Models.....	274
13.1.3	ARCH(q): Definition and Properties	278
13.1.4	Estimation of an ARCH(q) Model	279
13.1.5	Generalized ARCH (GARCH)	280
13.1.6	Estimation of GARCH(p, q) Models	282
13.2	Extensions of the GARCH Model	285
13.2.1	Exponential GARCH.....	285
13.2.2	Threshold ARCH Models.....	287
13.2.3	Risk and Returns	288
13.2.4	Estimation Results for DAX and FTSE 100 Returns	289
13.3	Shortfalls of GARCH.....	290
13.3.1	Recent Challenges to GARCH Models	290
13.3.2	Volatility Forecasting for DAX and FTSE 100 Returns.....	297

13.4	Multivariate GARCH Models	298
13.4.1	The Vec Specification	299
13.4.2	The BEKK Specification	302
13.4.3	The CCC Model	303
13.4.4	The DCC Model	303
13.4.5	An Empirical Illustration	304
13.5	Continuous-Time GARCH Models	307
13.5.1	COGARCH(1,1): Definition and Properties	308
13.5.2	Relation Between GARCH and COGARCH	309
13.5.3	Estimation of the COGARCH(1,1) Model	310
13.5.4	Extensions of the COGARCH Model	311
13.6	Recommended Literature	312
13.7	Exercises	313
14	Long Memory Time Series	317
14.1	Definition of Long Range Dependence	318
14.2	Fractional Integration and Long-Memory	319
14.3	Long Memory and Self-similar Processes	321
14.4	Detection of the Long Memory	324
14.4.1	Rescaled Range and Rescaled Variance Test	324
14.4.2	Semiparametric Test	326
14.4.3	Tests for Spurious Long Memory	326
14.5	Estimation of the Long Memory Parameter	327
14.5.1	Exact Maximum Likelihood Estimator	327
14.5.2	Regression on the Periodogram	328
14.5.3	Gaussian Semiparametric Estimator	329
14.6	Long Memory Models	330
14.6.1	ARFIMA Model	330
14.6.2	GARCH Long Memory Models	331
14.6.3	FIAPARCH Model	333
14.6.4	HYGARCH Model	334
14.7	An Empirical Illustration	334
14.8	Recommended Literature	337
15	Non-parametric and Flexible Time Series Estimators	339
15.1	Non-parametric Regression	340
15.2	Construction of the Estimator	342
15.3	Empirical Illustration	344
15.4	Flexible Volatility Estimators	345
15.5	Pricing Options with ARCH-Models	346
15.6	Application to the Valuation of DAX Calls	352
15.7	Recommended Literature	355

Part III Selected Financial Applications

16	Value-at-Risk and Backtesting	359
16.1	Forecast and VaR Models	360
16.2	Backtesting with Expected Shortfall	363
16.3	Backtesting in Action	364
16.4	Recommended Literature	369
16.5	Exercises	369
17	Copulae and Value at Risk	373
17.1	Copulae	375
17.2	Copula Classes	377
17.2.1	Simplest Copulae	378
17.2.2	Elliptical Copulae	378
17.2.3	Archimedean Copulae	382
17.2.4	Hierarchical Archimedean Copulae	385
17.2.5	Generalizations	386
17.3	Monte Carlo Simulation	387
17.3.1	Conditional Inverse Method	387
17.3.2	Marshal–Olkin Method	391
17.4	Copula Estimation	391
17.4.1	Full Maximum Likelihood Estimation	393
17.4.2	Inference for Margins	393
17.4.3	Canonical Maximum Likelihood	394
17.4.4	Gaussian Copula Estimation	395
17.4.5	t -Copula Estimation	396
17.5	Asset Allocation	396
17.6	Value-at-Risk of the Portfolio Returns	397
17.6.1	VaR of the P&L	401
17.6.2	Three-Dimensional Portfolio	405
17.7	Recommended Literature	408
17.8	Exercises	411
18	Statistics of Extreme Risks	413
18.1	Risk Measures	413
18.2	Data Description	415
18.3	Estimation Methods	418
18.3.1	The Block Maxima Method	419
18.3.2	The Peaks-over-Threshold (POT) Method	429
18.4	Backtesting	440
18.5	EVT for Time Series	441
18.6	Recommended Literature	446
18.7	Exercises	447

19	Neural Networks	451
19.1	From Perceptron to Non-linear Neuron	452
19.2	Back Propagation	459
19.3	Neural Networks in Non-parametric Regression Analysis	461
19.4	Forecasts of Financial Time Series with Neural Networks	467
19.5	Quantifying Risk with Neural Networks	471
19.6	Recommended Literature	475
20	Volatility Risk of Option Portfolios	477
20.1	Description of the Data	478
20.2	Principal Component Analysis of the VDAX's Dynamics	481
20.3	Stability Analysis of the VDAX's Dynamics	483
20.4	Measure of the Implied Volatility's Risk	485
20.5	Recommended Literature	487
20.6	Exercises	487
21	Non-parametric Estimators for the Probability of Default	491
21.1	Logistic Regression	491
21.2	Semi-parametric Model for Credit Rating	493
21.3	Credit Ratings with Neural Networks	497
22	Credit Risk Management and Credit Derivatives	499
22.1	Basic Concepts	499
22.2	The Bernoulli Model	501
22.3	The Poisson Model	502
22.3.1	Bernoulli vs. Poisson	503
22.4	The Industrial Models	504
22.4.1	CreditMetrics TM and KMV Models	504
22.4.2	CreditRisk ⁺ Model	505
22.4.3	Other Models	507
22.5	One Factor Models	508
22.6	Copulae and Loss Distributions	510
22.7	Collateralized Debt Obligations	514
22.8	Exercises	521
A	Technical Appendix	523
A.1	Integration Theory	523
A.2	Portfolio Strategies	527
	Symbols and Notations	535
	References	539
	Index	551
