Preface page xi

Acknowledgements xii

List of Abbreviations xiii

## **1 The evolution of knowledge about the Arctic and its climate 1**

- 1.1 Historical exploration 4
- 1.2 The beginning of systematic observations 10
- 1.3 The modern era 12

## **2 Physical characteristics and basic climatic features 17**

- 2.1 The Arctic ocean 19
- 2.2 The Arctic lands 30
- 2.3 Basic climatic elements 37

## **3 The basic atmospheric heat budget 55**

- 3.1 The Arctic and the global heat budget 56
- 3.2 The basic Arctic heat budget 60
- 3.3 Further analysis of  $F_{\text{wall}}$  69

## **4 The atmospheric circulation 74**

- 4.1 Historical perspective 75
- 4.2 The stratospheric circulation 79
- 4.3 The Arctic tropopause 90
- 4.4 The mid-tropospheric circulation 92

|          |   |            |
|----------|---|------------|
| 4.5      | Surface and near-surface circulation                            | 94         |
| 4.6      | Polar Lows  | 106        |
| <b>5</b> | <b>The surface energy budget</b>                                | <b>110</b> |
| 5.1      | The energy balance equations                                    | 111        |
| 5.2      | The downward solar radiation flux                               | 115        |
| 5.3      | Surface albedo  | 120        |
| 5.4      | Longwave radiation fluxes                                       | 125        |
| 5.5      | Distribution of net radiation                                   | 127        |
| 5.6      | Cloud radiative forcing   | 128        |
| 5.7      | Radiation fluxes from surface observations: examples from SHEBA | 131        |
| 5.8      | Partitioning of net radiation                                   | 131        |
| 5.9      | Skin temperature, SAT and vertical structure                    | 137        |
| 5.10     | Radiation–climate feedbacks                                     | 143        |
| <b>6</b> | <b>Precipitation, net precipitation and river discharge</b>     | <b>147</b> |
| 6.1      | Precipitation   | 148        |
| 6.2      | Evapo-transpiration and net precipitation                       | 156        |
| 6.3      | Mean annual cycles for the major terrestrial drainages          | 162        |
| 6.4      | River discharge and runoff                                      | 166        |
| <b>7</b> | <b>Arctic ocean–sea ice–climate interactions</b>                | <b>177</b> |
| 7.1      | Sea ice formation, growth and melt                              | 179        |
| 7.2      | Mean circulation, ice zones and concentration                   | 183        |
| 7.3      | Sea ice motion  | 190        |
| 7.4      | Examples of large-scale ocean–sea ice–climate interactions      | 197        |
| 7.5      | The Fram Strait outflow and the thermohaline circulation        | 204        |
| <b>8</b> | <b>Climate regimes of the Arctic</b>                            | <b>208</b> |
| 8.1      | The Greenland Ice Sheet   | 209        |
| 8.2      | Polar desert  | 217        |
| 8.3      | Maritime Arctic   | 220        |
| 8.4      | Central Arctic Ocean  | 223        |
| 8.5      | Mountains and uplands   | 226        |
| 8.6      | Urban modifications of local climate                            | 228        |
| <b>9</b> | <b>Modeling the Arctic climate system</b>                       | <b>229</b> |
| 9.1      | General model types   | 230        |
| 9.2      | Single-column models  | 232        |
| 9.3      | Land surface models   | 237        |
| 9.4      | Sea ice and ice–ocean models                                    | 240        |
| 9.5      | Global climate models   | 245        |
| 9.6      | Regional climate models   | 252        |
| 9.7      | Numerical weather prediction models                             | 255        |

|      |  |     |
|------|--|-----|
| 9.8  | Ecosystem models   | 258 |
| 9.9  | Summary of model errors                                  | 260 |
| <br> |  |     |
| 10   | <b>Arctic paleoclimates</b>                              | 262 |
| 10.1 | The distant past   | 263 |
| 10.2 | Paleoclimate records for the Quaternary                  | 266 |
| 10.3 | Features of the Quaternary                               | 269 |
| 10.4 | Rapid climate shifts                                     | 276 |
| 10.5 | Regional aspects of the LGM                              | 279 |
| 10.6 | Deglaciation   | 283 |
| 10.7 | The Holocene   | 287 |
| <br> |  |     |
| 11   | <b>Recent climate variability, trends and the future</b> | 291 |
| 11.1 | Setting the stage  | 292 |
| 11.2 | Summary of observed variability and change               | 295 |
| 11.3 | The NAO and AO   | 306 |
| 11.4 | The NAO/AO framework: merits and shortcomings            | 312 |
| 11.5 | Related multiyear climate variability                    | 324 |
| 11.6 | The future   | 326 |
| <br> |  |     |
|      | <b>References</b>  | 335 |
| <br> |  |     |
|      | List of selected websites                                | 377 |
