

CONTENTS

Preface	xi
1 Background of the Aptitudes Research Project	1
Origins of factor analysis and factors	1
General plans	9
2 The structure of intellect	17
Nature of the SI model	17
Origins and development of the SI model	21
Implications and uses of the SI model	27
3 The goal of factorial invariance	33
Factorial invariance as scientific reproducibility	34
Approaches to the achievement of invariance	35
Types of factorial invariance	36

Indices of factorial invariance	38
Handling of the invariance problem by the ARP	41
4 Methods of analysis	43
<i>Preparation of the earlier data for reanalysis</i>	45
Application of uniform analytical procedures	46
Some features of results of the analyses	54
Additional multivariate techniques	58
Summary	60
5 Abilities in reasoning and problem solving	61
The reasoning-A analysis	62
The reasoning-B analysis	90
The study of general reasoning	93
Studies of reasoning, creativity, and evaluation abilities	97
<i>Analysis of abilities in problem solving</i>	103
The study of symbolic abilities	112
An analysis of figural-cognition and figural-convergent-production abilities	115
General summary	121
6 Abilities in creative thinking and planning	123
The first study of creative-thinking abilities	124
The analysis of abilities in planning	142
A study of verbal fluency	150
A study of intellectual flexibility	160
Creative abilities at the ninth-grade level	165
<i>Creative abilities at the sixth-grade level</i>	169
Figural- and symbolic-divergent-production abilities	171
Figural-, symbolic-, and semantic-DP abilities	176
A study of transformation abilities	177
Summary on creative-thinking and planning abilities	186
7 Evaluation abilities	189
The first analysis of evaluation	189
Semantic-evaluation abilities	205
Symbolic-evaluation abilities	213
Figural-evaluation abilities	220
<i>The targeted-rotation analysis</i>	226
General concluding remarks	227
8 Memory abilities	229
Analysis of semantic-memory abilities	230
Symbolic-memory abilities	242
Visual-figural-memory abilities	250
Summary and conclusions	255

9 Behavioral abilities	257
Social intelligence	257
Behavioral-cognition abilities	258
Behavioral divergent production	269
Current status of knowledge of social intelligence	277
10 Some extra-intellectual-aptitude relationships	279
Predictions of teachers' ratings of creativity	280
Predictions of grades in the U.S. Coast Guard Academy	284
Predicting achievement in higher-mathematics courses	288
Validation of SI abilities in ninth-grade mathematics	291
The role of SI abilities in concept learning	304
Roles of transformation abilities in school learning	315
Importance of SI abilities as viewed by creative individuals	317
Relevance of selected abilities in performances of military officers	319
Relations of SI abilities to other personality traits, in adults	325
Relations of SI abilities to other personality traits, in children	336
Summary and conclusions	342
11 Some general considerations	347
Factor analysis as a scientific method	347
Some findings of general psychological significance	353
The future of intelligence testing	356
Conclusions	361
Appendix A	363
Appendix B	367
References	499
Name index	507
Subject index	509
