<i>Preface</i>	<i>xiii</i>
<i>Author's Notes and Acknowledgments</i>	<i>xix</i>

1

Scientific and Social Issues in the Advance of Behavior Genetics	1
1. Historical Roots of Genetics Prior to 1800	1
2. Modern Growth of Interest in Human Psychological Heredity	3
3. Emotional Problems in Absorbing the Findings of Human Genetics	4
4. The Warring Ancestries of Genetic Methods and Concepts	8
5. Behavior Genetics as a Vital Part of Learning Theory and Social Psychology	10
6. The Need for Precise Nomenclature	11
7. Summary	16
	vii

2

Methods and Models Available for Research in Behavior Genetics	19
1. Overview of Methods	19
2. The Clinical Syndrome, Genealogical, or Pedigree Method (CSG Method)	21
3. Experimental, Inheritance-Manipulating Animal Research	31
4. The Physical-Linkage Method	34
5. The Convarkin Methods: Initial Survey	44
6. Maturation–Learning Process Analysis	48
7. Summary	51

3

The Twin Method of Investigation with Illustrative Findings	55
1. Comparisons of Variances as a First Step in Behavior Genetics Research in the Convarkin Methods	55
2. The Nature of the Complete and Partial Twin Methods	56
3. The Breakdown of Concrete into Abstract Variances	58
4. Some Qualifying Considerations in Method and Model	60
5. Interaction and Correlation of Genetic and Threptic Effects	65
6. The Calculation of Heritability, H , and the Nature–Nurture Ratio, N	68
7. A Brief Survey of Ability Heritabilities by the Twin Method on within-Family Variance	71
8. A Brief Survey of Personality and Psychopathology Heritabilities by the Twin Method on within-Family Variance	77
9. Summary	84

4

The Genesis of the MAVA Model and Its Solutions	89
1. The Intrinsic Potency of Using Many Family Constellations in MAVA	89
2. The Principles for Relating Abstract to Concrete Variances	91

3. The Unknowns That Genothreptics Seeks: A Priority List	100
4. The OSES Solutions for the Most Limited MAVA Experiment	103
5. The OSES Solutions for the Less Limited MAVA Model and Experimental Design	109
6. The Full MAVAs as the Most Complete Convarkin Design for Analyses through Offspring Data	114
7. MAVAs Analyses by Least-Squares and Maximum-Likelihood Methods	118
8. Summary	121

5

Further Designs for Determining Genetic, Threptic, and Heritability Values 125

1. The Incidence of Assortive Mating in Typical Populations Today	125
2. How Assortiveness Affects Estimates of Genetic and Threptic Values	134
3. Using Purely Genetic, Mendelian Relations of Parents, Offspring, and Other Relatives as an Adjunct to Solutions	141
4. How Dominance, Epistacy, and Linkage Affect Genetic Partitioning for Reaching Broad (H_B) and Narrow (H_N) Heritabilities	148
5. The Special Heritabilities Calculated by Parent-Offspring Methods with and without Genetic Partitioning	158
6. The Parent-Offspring Constellation as an Extended but "Fragmentary" MAVAs Design	162
7. Other Single- or Two-Constellation and Across-Generations Designs: Adoptive Families, Sibs Apart	165
8. The Macroscopic Approach through Racial and Cultural ANOVA Designs	179
9. Summary	182

6

Models of Interaction of Learning and Genetic Processes 187

1. Relating Individual Personality Development to the Ambient Culture by the Econetic Matrices	187
---	-----

2. Discovering Learning Sources for a Particular Trait by PLA Experimental Design	191
3. Genothreptic Splitting of Developmental Curves: Four Methods within and across Cultures	196
4. Factorial Separation of Curves by <i>P</i> -Technique: The Case of Intelligence	210
5. The Use of Comparative MAVA in a Developmental Setting	215
6. Learning Calculations Refined: The Contributions of Particular Environmental Elements to Pure Threptic Measures	221
7. The Rise of Unitary Trait Patterns by Genothreptic Interaction	228
8. Summary	235

7

Evaluating Interactions: Path Coefficients and Diverse Heritabilities **241**

1. Interaction and Covariance of Genetic and Environmental Influences	241
2. The Logically Possible, Empirically Researchable Forms of Genothreptic Covariance	243
3. Causal Influences in Genothreptic Correlations	247
4. Path Coefficient Hypotheses	250
5. Further Path Coefficient Models in the Parent and Offspring Generation	257
6. Construing and Contextual Dimensions in Environmental Action	261
7. Heritabilities, Broad and Narrow: The Genotypic Structures Fitting Genetic Variances	264
8. The Six Heritability Coefficients and Their Interpretations	266
9. Summary	270

8

The Inheritance of Abilities: Some Psychometric Requirements **275**

1. Three Approaches toward a Strategic Choice of Psychological Variables for Genothreptic Research	275
2. The Triadic Theory of Ability and Its Genetic Implications	277
3. Correcting for Error in Measurements and Samples: General Considerations	283

4. Psychometric Handling of Compositeness and Correlation in Calculating True Variances	286
5. The Heritability of Primary Abilities	295
6. The Heritability of Fluid and Crystallized Intelligence Examined by the OSES Method	303
7. The Heritability of Fluid and Crystallized Intelligence Examined by the Least-Squares Method	308
8. Final Hypotheses with Suggestions for Further and Crucial Research Designs	312
9. Summary	320

9

The Heritability of Nine Primary and Five Secondary Source Traits in *Q*-Data **325**

1. The Properties of Questionnaire Data	325
2. The Personality Control Triumvirate: <i>C</i> , <i>G</i> , and <i>Q</i> ₃ , by OSES, Least-Squares, and Maximum-Likelihood Methods	328
3. Heritabilities of Dominance (<i>E</i>), Premsia (<i>I</i>), Surgency (<i>F</i>), and Self-Sufficiency (<i>Q</i> ₂), by the Three Methods	334
4. OSES, Least-Squares, and Maximum-Likelihood Analysis of Guilt Proneness (<i>O</i>), Parmia (<i>H</i>), and Ergic Tension (<i>Q</i> ₄)	339
5. The Heritabilities of the Secondaries: Exvia–Invia (<i>Q</i> _I), Anxiety (<i>Q</i> _{II}), Cortertia (<i>Q</i> _{III}), Independence (<i>Q</i> _{IV}), and Control (<i>Q</i> _{VIII})	342
6. General Considerations in Evaluating Results and Their Implications	347
7. Summary	354

10

Heritability and Conceptual Advances for Source Traits in *T*-Data **359**

1. Properties of Objective Test (<i>T</i> -Data) Source Trait Measurement	359
2. The Heritability of Assertiveness (U.I. 16), Inhibitory Control (U.I. 17), and Independence (U.I. 19) by OSES, Least Squares, and Maximum Likelihood	362
3. The Heritability of Anxiety (U.I. 24), Regression (U.I. 23), and Narcissistic Self-Sentiment (“Self-Will”) (U.I. 26)	368

4. The Heritability of Exuberance (U.I. 21) and Asthenia (U.I. 28)	371
5. The Heritability of Reality Contact (Realism-versus-A Psychotic Break) (U.I. 25), Exvia-Invia (U.I. 32), and Sanguineness-versus-Discouragement (U.I. 33)	373
6. Structural and Genetic Models to Explain the Heritability of Secondary Personality Traits	377
7. Some Perspective on Regularities and Irregularities of Findings	387
8. Objectives for the Future in Behavior Genetics: In Research and in Psychological Practice	392
9. Summary	397
